This model was introduced in 1968. It is offered with a 22", 24", or 26" barrel. The Model 77 is chambered for most calibers from .22-250 through .458 Win. Mag. The action is of a modified Mauser-type, finished in blue with a checkered walnut stock and red rubber buttplate. The rifle is available milled for Ruger scope rings or in the round-top style that allows the mounting of any popular scope ring system. This model is designated 77R when supplied with rings only; and 77RS, when supplied with rings and sights. This model was replaced by the Model 77 MK II.

Model 77 Flat Bolt

This is an example of the slight variations that make this model collectible. This is essentially the same rifle with the knob on the bolt handle flattened. They were only produced in the configuration until 1972. Watch for fakes, and read specialized material. Calibers such as the 6.5 Rem. Mag., .284, and .350 Rem. Mag. will bring a premium especially in the RS model.

NOTE: Nonprefixed rifles exists in calibers and configurations other than those advertised by Ruger. These should be individually appraised.

650	500	400	350	275

Model 77 RL & RLS

This variation is similar to the standard model except that it features an ultralight 20" barrel and black forearm tip. This model was also available in an 18.5" carbine version with sights designated the RLS. This model was also in an 18.5" carbine version with sights designated the RLS. They were chambered for the .22-250, .243, .257, .270, .250-3000, .308, and .30-06. Weight is only 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
550	450	375	325	275	225

Model 77V Varmint

This variation is similar to the standard Model 77 except that it has a 24" heavy barrel that is drilled and tapped for target-scope bases and has a wider beavertail forearm. It is chambered for the .22-250, .243, 6mm, .25-06, .280, and .308. This model was also chambered for the .220 Swift in a 26" heavyweight barrel.

Ruger Model 77: Mark I vs. Mark II

This Ruger bolt action was produced in the Mark I version until November 1991 when it was dropped from the product line. In December 1991 Ruger began producing a new bolt-action Model 77 design referred to as the Mark II. There are several noticeable and important differences between the two versions. The Model 77 Mark I features a sliding tang safety while the Mark II has a new three-position wing safety. The Mark I designed Model 77 holds 5 rounds while the newer Mark II holds 4 rounds. The Mark I incorporates and chrome moly bolt and the Mark II has a stainless steel bolt. The Mark I has a spring loaded ejector while the Mark II has a fixed pin design. The Mark I has an adjustable trigger as opposed to the newer Mark II's nonadjustable trigger. The Mark I bolt face does not incorporate a central feed system while the Mark II does have a central feed. The Mark II design also features a slimmer action that the older Mark I design.

NOTE: In 2008 the Standard and All-Weather versions of the 77R MKII were discontinued.

Model 77R MKII

Introduced in 1992 this model is the basic Model 77 rifle. Features blued metal parts and no sights. Available in 15 different calibers from .223 to .338 Win. Mag. in barrel lengths from 22" to 24" depending on caliber. Comes from factory with scope bases and rings. Rifle weighs approximately 7 lbs.

—	—	950	475	100

TEXAS CONTRACT RIFLES

Three contractors produced rifles for the State of Texas during 1862 and 1863. One of these patterns has a sporting back-action lock, Enfield barrel bands, an overall length of 47-3/8", heavy 32" long barrel of .58 caliber. Total deliveries by all contractors amounted to 1,464 rifles. Quality of these arms was decidedly inferior and often complained about.

TEXAS GUNFIGHTERS

Ponte Zanano, Italy

Shootist Single-Action

A .45 Long Colt caliber single-action revolver with a 4.75" barrel. Nickel-plated with one-piece walnut grips. This model is made by Aldo Uberti. Introduced in 1988.

THOMPSON

SEE—Auto Ordnance Corp.

THOMPSON/CENTER ARMS

Rochester, New Hampshire

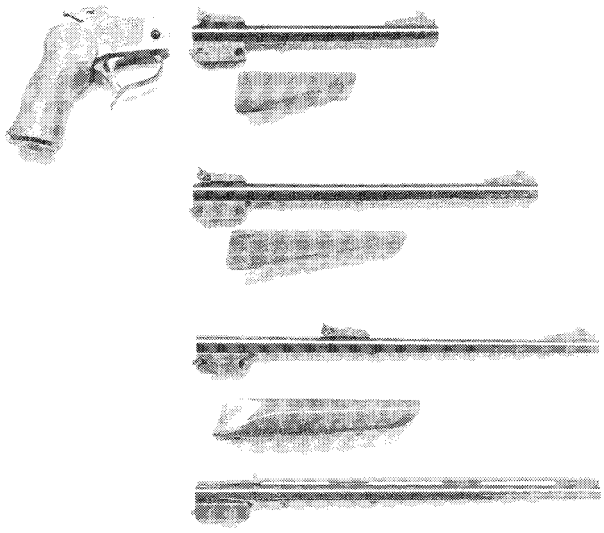
NOTE: In late 2006 it was announced that Thompson/Center Arms had been acquired by Smith & Wesson.

Contender

Introduced in 1967 this model is the basis for all past and present variations. The standard version is offered with a 10" octagon barrel and is available in 10" Bull barrel, 10" vent rib barrel, 14" Super models, 14" Super with vent rib, 16" Super models, and 16" Super models with vent rib. A stainless steel finish is available on all models except the 10" octagon barrel. The action on these handguns is a single-shot, break open design. Unless otherwise stated the barrels are blued. The Competitor grip is walnut with rubber insert mounted on back of grip. A finger groove grip is also available made from walnut with finger notching and thumb rest. Forend is American black walnut in various length and designs depending on barrel size. Stainless steel models have rubber grips with finger grooves. Standard sights are standard Patridge rear with ramp front. An adjustable rear sight is offered as an option. Barrels with vent ribs are furnished with fixed rear sight and bead front sight. Due to the numerous variations of the Contender several breakdowns will be listed to help the reader find the closest possible handgun he may be looking for.

NOTE: Early frames with no engraving, called flatsides, and those with eagle engraving bring between $2,000 and $2,500 on the collector market.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.



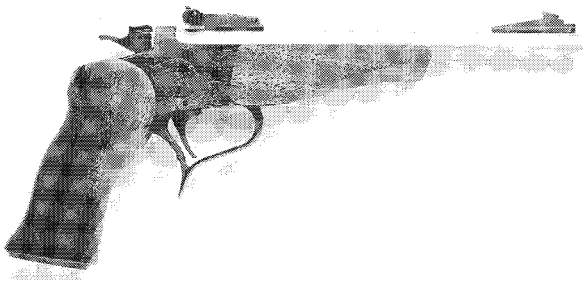
10" Octagon Barrel Model

This was the first Contender design and is offered in .22 LR only. It is supplied with adjustable rear sight and mounting holes for scope. Grips are Competitor or rubber. Weighs about 44 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
360	300	250	200	150	100

10" Bull Barrel Model

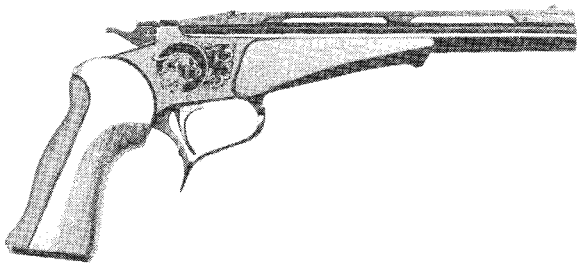
Comes standard with adjustable rear sight, mounting holes for scope mounts, and Competitor grips for blued models and rubber grips on stainless models. Available in blued or stainless steel. Offered in these calibers as complete pistols: .22 LR, .22 LR Match, .22 Win. Mag. (blued only), .22 Hornet, .223, 7mm T.C.U. (blued only), .30-30, .32-20 (blued only), .357 Mag., .357 Rem. Max (blued only), .44 Mag., .45 Colt, .410 bore. In 1994 Thompson/Center introduced the .300 Whisper cartridge to its Contender product line. Weighs approximately 50 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
350	300	250	200	150	100

10" Vent Rib Model

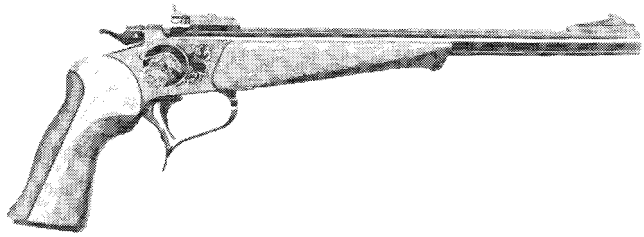
This features a raised vent rib and is chambered for the .45 Long Colt/.410 bore. The rear sight is fixed and the front sight is a bead. A detachable choke screws into the muzzle for use with the .410 shell. Furnished with Competitor grips or rubber grips.



NIB	Exc.	V.G.	Good	Fair	Poor
370	320	270	220	150	100

Super 14" Model

This model features a 14" bull barrel. Furnished with adjustable rear sight and ramp front sight. Drilled and tapped for scope mounts. Competitor or rubber grips are offered. Available in blued or stainless steel finish. Furnished in these calibers in a complete pistol only: .22 LR, .22 LR Match, .17 Rem. (blued only), .22 Hornet, .222 Rem. (blued only), .223 Rem., 7mm T.C.U. (blued only), 7-30 Waters, .30-30, .357 Rem. Max (blued only), .35 Rem., .375 Win. (blued only), .44 Mag. (blued only). Weighs approximately 56 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
360	300	250	200	150	100

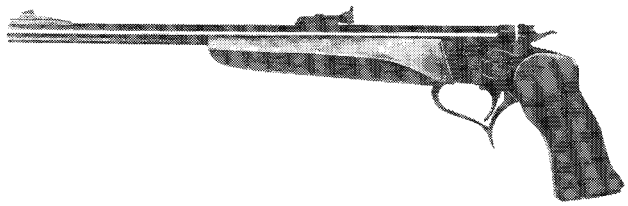
Super 14" Vent Rib Model

Similar to the 10" vent rib model chambered for the .45 Long Colt/.410 bore but furnished with a 14" vent rib barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
385	325	275	215	150	100

Super 16" Model

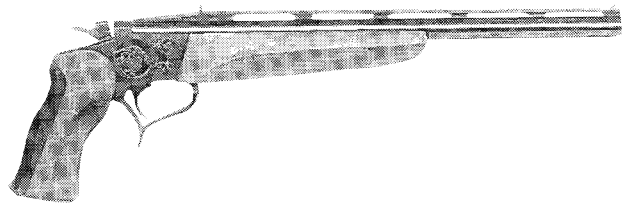
Fitted with a 16.25" tapered barrel, two position adjustable rear sight. Drilled and tapped for scope mount. Furnished with Competitor grips or rubber grips and choice of blued or stainless steel finish. Available in these calibers as complete pistols only: .22 LR, .22 Hornet, .223 Rem., 7-30 Waters, .30-30, .35 Rem., .45-70 Government. Weighs approximately 56 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
370	320	275	215	150	100

Super 16" Vent Rib Model

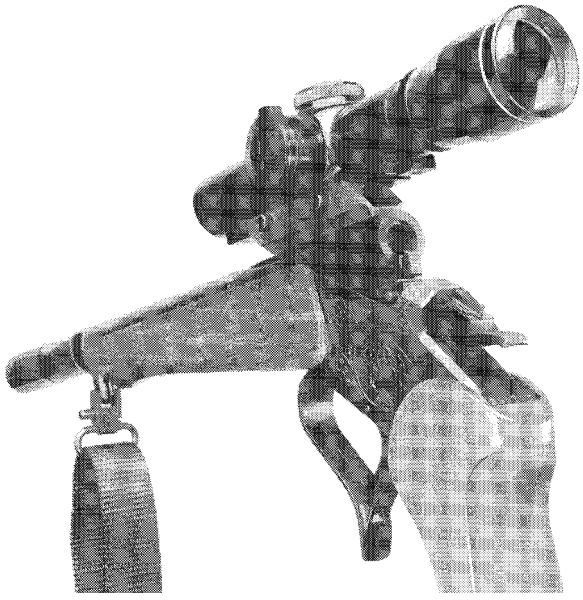
Chambered for .45 Long Colt/.410 bore this model was offered for the first time in 1993. All other features are the same as the other Contender .45/.410 bore pistols.



NIB	Exc.	V.G.	Good	Fair	Poor
390	350	300	250	175	125

Contender Hunter Model

This model is designed for handgun hunting and is offered in two barrel lengths: 12" and 14". The barrels are fitted with a compensator and a 2.5 power scope. There are no iron sights fitted. A nylon carrying sling and soft leather carrying case are standard. Offered in these calibers: 7-30 Waters, .30-30 Win., .35 Rem., .45-70 Government, .44 Mag., .223 Rem., and .375 Win. Fitted with Competitor grips and offered in blued or stainless steel finish. Weighs approximately 64 oz.

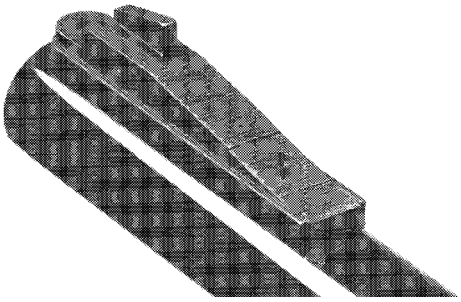


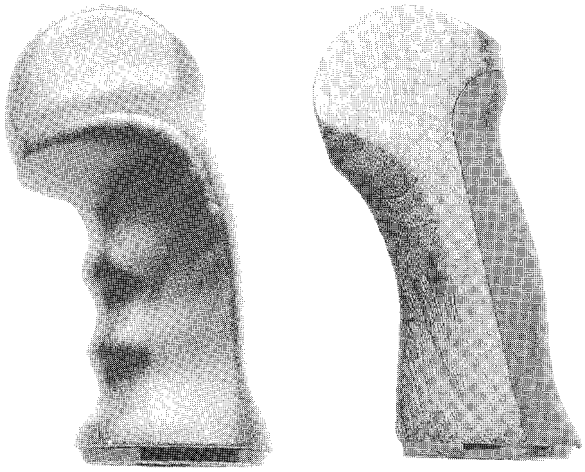
NIB	Exc.	V.G.	Good	Fair	Poor
575	500	400	300	200	100

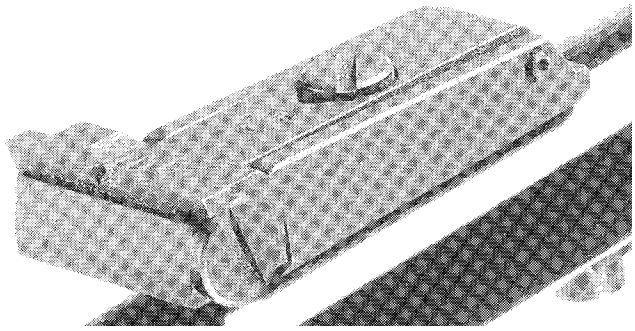
NOTE: Barrel interchangeability is acceptable for blued barrels and frames with stainless steel barrels and frames. DO NOT interchange Alloy II barrels and frames with either blued or stainless steel components.

G2 CONTENDER SERIES

Introduced in 2003, this is a second generation Contender that features a slightly different look, a simplified internal design that allows re-cocking the hammer without having to break open the action, and differently shaped grips that give more clearance between the grip and the finger guard. These G2 firearms will accept previously manufactured Contender barrels and forends but not grips.







G2 Contender

Offered with both 12" and 14" barrels. Chambered for .22 Hornet, .357 Mag., .44 Mag., .45 Colt/.410 in 12" barrels. In 14" barrel chambered for the .17 HMR, .22 LR, .22 Hornet, .223 Rem., 7-30 Waters, .30-30, .44 Mag., .45 Colt/.410 and the .45-70. Adjustable sights and drilled and tapped for scope mounts. Walnut grips. Weight for 12" barreled guns is about 3.5 lbs., for 14" barreled guns about 3.75 lbs. In 2004 the .204 Ruger and .375 JDJ calibers were added.

NIB	Exc.	V.G.	Good	Fair	Poor
560	450	—	—	—	—

G2 Contender Rifle

This rifle is fitted with a 23" barrel with no sights and is chambered for the .17 HMR, .22 LR, .223 Rem., .30-30, and the .45-70. Walnut stock with blued finish. Weight is about 5.4 lbs. In 2004 the .375 JDJ and .204 Ruger calibers were added.

NIB	Exc.	V.G.	Good	Fair	Poor
600	475	—	—	—	—

G2 Contender Shotgun

Chambered for the .410 bore shell and fitted with a 24" ventilated rib barrel. Walnut stock. Weight is about 5.4 lbs. Introduced in 2004.

NIB	Exc.	V.G.	Good	Fair	Poor

TOBIN ARMS MANUFACTURING CO.

Norwich, Connecticut and Windsor, Ontario, Canada

The Tobin Arms Manufacturing Co. operated from about 1905 to 1925 making an exposed hammer double and two hammerless models in four grades. The "Simplex" was cleverly designed (based on a patent by C.M. Wollam) side plated double-barrel internal hammer shotgun which resembled the Hopkins and Allen guns of that time. Some may have been private branded. Most of the Tobin doubles were made in Norwich, Conn., and are so marked. After 1909 operations were transferred to Windsor, Ont., Canada, and some guns will be found with that address. Tobin guns are not often seen by collectors and are highly prized because of their relative rarity and because they were considered good guns by top dealers such as C.J. Godfrey Co. of New York City and Iver Johnson Sporting Goods of Boston. Values depend on condition and range from $200 in poor condition to $1000 and up for engraved versions in good to very good condition.

NOTE: Tobin also manufactured a .22 rimfire single-shot rifle apparently during the period 1910-1925. These are rather scarce and their value is estimated to be in the $500 - $700 range, depending on condition.

A rough timeline of the Tobin Arms Manufacturing Company follows:

1903: founded by Frank M. Tobin in Norwich, CT.

1904-1909: manufactured hammer and hammerless sidelock shotguns (12ga. and 16ga.) in Norwich, Connecticut, USA

1909: purchased by a group of Canadian Investors and moved to Woodstock, ON, CAN

1910-1923/25: manufactured shotguns and rifles (entire product list unknown)

1923/25: purchased by sporting goods distributor G.B.Crandall

1923/25-1951: G.B.Crandall continued production until 1951 (possibly under the name GB Crandall)

Thanks to Jack of Florida for furnishing us with this information!

TODD, GEORGE H.

Montgomery, Alabama

Rifled Musket

A .58 caliber single-shot percussion rifle with a 40" barrel and full length stock secured by three barrel bands. Barrel and lock finished in the bright, brass furniture and walnut stock. The lock marked "George H. Todd/ Montgomery, Ala." Very Rare.

TORKELSON ARMS CO.

Harfield, Warren, and Worcester, Massachusetts

Double-Barrel Shotguns

Reinhard T. Torkelson's company made double-barrel, box-lock, side-by-side, hammerless shotguns in four models at several locations between 1885 and 1910. He worked with Iver Johnson at Fitchburg, Mass., and also built guns carrying the Lovell (Boston) name. His "New Worcester" marked guns are quite common. they were sold by Sears and other large and well known houses.

U.S. REPEATING ARMS CO.

SEE—Winchester

UBERTI, ALDO/UBERTI USA

Ponte Zanano, Italy

This company manufactures high-grade reproductions of famous Western-style American firearms. Their products have been imported over the years by a number of different companies. They produce both blackpowder guns and the cartridge firearms that are included in this section. This Italian manufacturer builds high quality firearms of the American West. Featured are Colt, Winchester, and Remington. Each importer stamps its name on the firearm in addition to the Uberti address.

NOTE: In 2000 Beretta Holding Company purchased Uberti.

Paterson Revolver

This is an exact copy of the famous and rare Colt pistol. Offered in .36 caliber with engraved 5-shot cylinder, the barrel is 7.5" long and octagonal forward of the lug. The frame is case hardened steel as is the backstrap. Grips are one-piece walnut. Overall length is 11.5" and weight is about 2.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
400	300	200	125	100	75

Walker Colt Revolver

This is a faithful reproduction of the famous and highly sought-after Colts. Caliber is .44 and the round barrel is 9" in length. The frame is case hardened steel and the trigger guard is brass. The 6-shot cylinder is engraved with fighting dragoons scene. Grip is one-piece walnut. Overall length is 15.75" and weight is a hefty 70 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
400	300	200	125	100	75

Colt Whitneyville Dragoon

This was the transition Walker. A reduced version of the Model 1847 Walker. Fitted with a 7.5" barrel and chambered for the .44 caliber.

NIB	Exc.	V.G.	Good	Fair	Poor
375	275	200	125	100	75

Colt 1st Model Dragoon Revolver

This was a shorter version of the Walker and evolved directly from that original design. This model is a 6-shot .44 caliber with a 7.5" barrel. The frame is color case hardened steel while the backstrap and trigger guard are brass. Grips are one-piece walnut. Overall length is 13.5" and weight is about 63 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
300	200	175	125	100	75

Colt 2nd Model Dragoon Revolver

This differs from the 1st model in that the cylinder bolt slot is square instead of oval.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
300	200	175	125	100	75

Colt 3rd Model Dragoon Revolver

This model varies from the 2nd model as follows:
a: Loading lever taper is inverted.
b: Loading lever latch hook is different shape.
c: Loading lever latch.
d: Backstrap is steel and trigger guard is brass oval.
e: Frame is cut for a shoulder stock.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
350	225	175	125	100	75

Colt Model 1849 Wells Fargo

This model has no loading lever. Chambered for .31 caliber cartridge. The barrel is octagonal. The frame is case colored and hardened steel while the backstrap and trigger guard are brass. Cylinder is engraved and holds 5 rounds. Grip is one-piece walnut. Overall length is 9.5" and weight is 34 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
325	200	150	125	100	75

Colt Model 1849 Pocket Revolver

Same as the Wells Fargo with the addition of a loading lever.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
300	200	150	125	100	75

Colt Model 1848 Baby Dragoon

Similar is appearance to the Model 1849 but with a 4" tapered octagonal barrel and a square back trigger guard. No loading lever. Weight is about 23 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
300	200	150	125	100	75

Model 1851 Navy Colt

Chambered for .36 caliber with an engraved 6-shot cylinder. The tapered octagonal barrel is 7.5". The frame is case colored steel and the backstrap and oval trigger guard are brass. Grips are one-piece walnut. Overall length is 13" and weight is about 44 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
300	175	150	125	100	75

Model 1861 Navy Colt

Sometimes referred to as the "New Navy" this model is similar in appearance to the Model 1851. Offered in two variations. The military version has a steel backstrap and trigger guard and is cut for a shoulder stock. The civilian version has a brass backstrap and trigger guard and is not cut for a shoulder stock.

425	300	225	175	100	75

Remington Model 1858 Target Revolving Carbine

Chambered for .44 caliber and fitted with an 18" octagon barrel. The frame is blued steel and the trigger guard is brass. Stock is select walnut. Overall length is 35" and weight is about 4.4 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
425	300	200	150	100	75

1875 Remington "Outlaw"

This is a replica of the original Remington cartridge pistol chambered for .357 Magnum, .44-40, .45 ACP, .45 ACP/.45 L.C. conversion, and .45 Colt. The frame is case colored steel and the trigger guard is brass. It is offered with a 7.5" round barrel and is either blued or nickel-plated, with two-piece walnut grips. Overall length is 13.75" and weight is about 44 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
415	300	225	150	125	125

Remington Model 1875 Frontier

Introduced in 2005 this model features a 5.5" barrel chambered for the .45 Colt cartridge. Case colored frame with blued barrel, backstrap, and trigger guard. Two-piece walnut grips. Weight is about 40 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
415	300	—	—	—	—

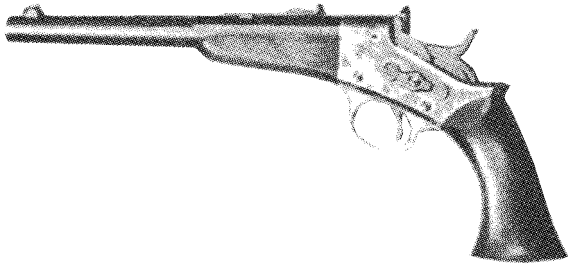
Remington Model 1890 Police

This is a 5.5"-barreled replica of the original Remington Pistol. It is chambered for .357 Magnum, .44-40, .45 ACP, .45 ACP/.45 L.C. conversion, and .45 Colt. The frame is case colored steel and the trigger guard is brass. It was available in either blued or nickel-plate. Grips are two-piece walnut and are fitted with a grip ring. Overall length is 11.75" and weight is about 41 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
440	325	250	175	125	125

Model 1871 Rolling Block Pistol

This is a single-shot target pistol chambered for .22 LR, .22 Magnum, .22 Hornet, .222 Rem., 223 Rem., .45 Long Colt, or .357 Magnum. It has a 9.5" half-octagonal, half-round barrel and is blued, with a case colored receiver and walnut grip and forearm. The trigger guard is brass. Overall length is 14" and weight is about 44 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
400	300	225	200	150	100

Model 1871 Rolling Block Carbine

This model is similar to the pistol, with a 22.5" half-octagonal, half-round barrel and a full-length walnut stock. trigger guard and buttplate are brass. Overall length is 35.5" and weight is approximately 4.8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
475	350	275	225	175	125

Henry Rifle

This is a brass-framed reproduction of the famous Winchester/Henry Rifle. It is chambered for the .44-40 cartridge, and this is basically the only departure from being a true and faithful copy. The octagonal barrel is 24.25" on the rifle model and 22.25" on the carbine model. There are also two Trapper models offered: an 18.5" barrel and a 16.5" version. This is a high-quality rifle and amazingly close to the original in configuration. There are three grades of engraving also available. Weights are: rifle 9.2 lbs., carbine 9 lbs., 18.5" trapper 7.9 lbs., 16.5" trapper 7.4 lbs. Finish can be steel, standard blued or charcoal blue.

NIB	Exc.	V.G.	Good	Fair	Poor
900	700	550	450	350	200

NOTE: Grade A add $350. Grade B add $450. Grade C add $600.

Winchester Model 1866

This is a faithful replica of the Winchester 1866. It is chambered for .22 LR, .22 Magnum, .38 Special, and .44-40, and .45 Long Colt. The rifle version has a brass frame and a 24.25" tapered octagon barrel. The frame finish is brass, with a walnut stock. Weight is about 8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
800	650	550	450	350	200

1866 Yellowboy Carbine

This model is similar to the standard rifle, but is offered with a 19" round tapered barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
700	600	500	450	350	200

Winchester Model 1873 Carbine

This is a reproduction of the Winchester 1873 chambered for .357 Magnum, .45 Long Colt, and .44-40. It has a case colored steel receiver and a 19" round tapered barrel. The lever is also case colored. The stock and forearm are walnut. Overall length is 38.25" and weight is about 7.4 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
900	700	500	450	350	200

Winchester Model 1873 Rifle

This model is similar to the Carbine, with a 24.25" octagonal barrel. Overall length is 43.25" and weight is approximately 8.2 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
950	750	600	450	350	200

NOTE: Extra barrel lengths from 30" to 20" in .45 L.C. and .44-40 are also offered at extra cost.

Winchester 1873 Short Sporting Rifle

As above but fitted with a 20" octagon barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
950	750	—	—	—	—

Winchester 1873 Half-Octagon Rifle

Same as above but with 24.25" half octagon barrel. Stock has a checkered pistol grip.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	800	600	450	350	200

Winchester 1873 Musket

Chambered for the .44-40 or .45 Long Colt cartridge and fitted with a 30" barrel with full stock and three barrel bands. Magazine capacity is 14 rounds. Weight is about 9 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	800	600	450	350	200

Model 1885 High Wall Single-Shot Carbine

Chambered for .38-55, .30-30, .44-40, .45 Colt, .40-65, or .45-70 with 28" barrel. Walnut stock.

350	300	250	200	150	100

Cattleman

This is a single-action revolver patterned closely after the Colt Single-Action Army. It is chambered in various popular calibers: .357 Magnum, .44-40, .44 Special, .45 ACP, .45 L.C./.45 ACP convertible, and .45 Colt. It is offered with barrel lengths of 4.75", 5.5", and 7.5". It is offered with either a modern or black powder-type frame and brass or steel backstraps. The finish is blued, with walnut grips. A Sheriff's Model with a 3" barrel and no ejector rod chambered for .44-40 and .45 Colt is also available and is valued the same. Weight is approximately 38 oz. for 5.5" barrel gun.

UNION FIRE ARMS COMPANY

Toledo, Ohio

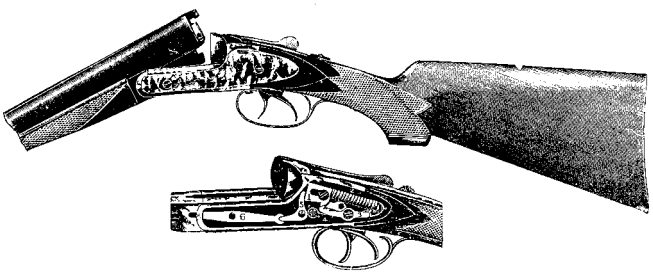
This company was incorporated in 1902 and used the names of Union Fire Arms, Union Arms Company, Illinois Arms Company (made for Sears) and Bee Be Arms Company. In 1917 the company was either bought up or absorbed by Ithaca Gun Company.

NOTE: Union Fire Arms Company (or Union Firearms Company, as it is sometimes known) slide action shotguns are not commonly seen. Though not widely collected, they seem to attract considerable interest as oddities, much as the Spencer/Bannerman slide action shotguns do. The values given below are approximate; as always, true value lies in the eyes of the buyer, not the seller.

Double Barrel Shotguns

Union's predecessor, Colton Manufacturing Co. (1894-1902) made a double for Sears. It was cleverly designed with coil mainspring striker locks set into sideplates. The Union double in 12 and 16 gauge with steel or Damascus barrels derived from it, but was a traditional hammerless sidelock side-by-side well-made gun (1902-1913) and also sold by Sears. Values depend on grade and condition.

Union also offered, about 1905, an unusual boxlock hammer gun, the Model 25 in 12 gauge only. It employs external hammers but they are mounted within the frame and the spurs protrude in front of the topsnap opener. These guns are hard to find and values range from $300 to $1,200 depending on condition. They are produced with steel, twist, or Damascus barrels but only in a plain grade.

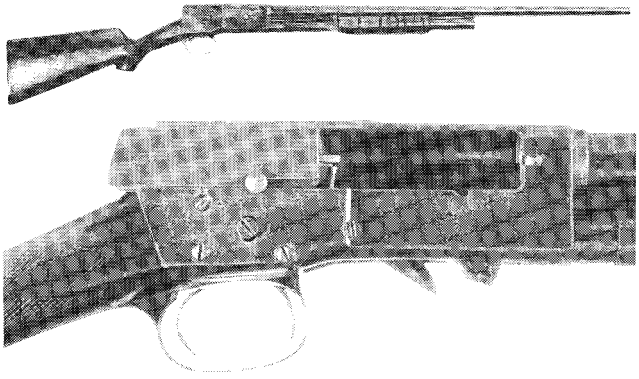


Courtesy Nick Niles

Exc.	V.G.	Good	Fair	Poor
1300	525	4050	300	200

Model 24

Slide action, Model 25 Peerless that was a fancy version of the Model 24 and the Model 25A, which was a trap model, were manufactured from 1902 to 1913 in 12 or 16 gauge with 24", 26", 28", or 32" steel or Damascus barrels. This gun had a unique double trigger. The front trigger cocked and decocked an internal firing pin and the back trigger fired the gun. The gun is marked on the left side of the frame and the pump release is on the right side. This model had one serious drawback, in that the slide that extracted a spent shell extended back over the comb of the stock. This often hit the shooter's thumb knuckle and caused injury. In 1907 Union redesigned their slide by reducing its length and shielding it behind a steel plate that covered the rear half of the opening. These are the Model 24, 25, and 25A improved versions. Approximately 17,000 of all models combined were made.



Exc.	V.G.	Good	Fair	Poor
—	750	300	200	100

Model 50

Manufactured 1911 to 1913. This was basically a redesign of the Model 24. The main distinguishing feature of the Model 50 was that the frame sloped down to meet the comb of the stock and the double trigger system was replaced by a single trigger. It came in 12 or 16 gauge with a 26", 28", 30", or 32" Krupp steel barrel. Fewer than 3,000 were made.

Exc.	V.G.	Good	Fair	Poor
—	850	400	300	200

Model 22

This was essentially a no frills Model 23. It had the same barrel length and steel options, but it had a plain walnut stock and no engraving. There were fewer than 10,000 Model 22 and 23s made.

Exc.	V.G.	Good	Fair	Poor
—	300	100	75	50

Model 23

Hammerless double, manufactured between 1902 and 1913 with or without automatic ejectors. With some engraving, it came in both single and double trigger models; this was their top grade gun. Came in 12 and 16 gauge with 28", 30", or 32" steel, twist, or Damascus barrels.

Exc.	V.G.	Good	Fair	Poor
—	450	150	125	100

Diamond Grade

Single-shot, manufactured between 1905 and 1910. It had a unique octagonal breech in 12 gauge only with 30" steel, laminated, or Damascus barrel. This was their premium grade single-shot. Few of these were made.

Exc.	V.G.	Good	Fair	Poor
—	450	200	100	50

Model 18

Single-shot, manufactured 1906 to 1913 came in 12 or 16 gauge. 30", 32", 34", or 36" steel barrel. A plain single-shot. Very few made.

Exc.	V.G.	Good	Fair	Poor
—	200	75	50	25

Reifngraber

A .32 or .38 S&W caliber gas operated semi-automatic pistol, with a 3" barrel. Blued with walnut grips, approximately 100 of these pistols were manufactured.

Exc.	V.G.	Good	Fair	Poor
—	2250	1100	500	350

Automatic Revolver

.32 S&W caliber, similar to the Webley Fosbery semi-automatic revolver with a 3" barrel. Blued with either walnut or hard rubber grips. The cylinder has zigzag grooves.

UNITED SPORTING ARMS, INC.

Tucson, Arizona

THE HISTORY OF SEVILLE AND EL DORADO REVOLVERS

by J.C. Munnell

The history of United Sporting Arms, its related companies, and the Seville and El Dorado line of single-action revolvers is a long and tortuous one. It actually begins in 1973 or 1974, with the formation of United States Arms in Riverhead, New York, by three individuals. Before any but a few prototype guns were made, the partners split up, with one remaining as United States Arms, and the other two forming United Sporting Arms in nearby Hauppauge, New York.

United States Arms produced the Abilene revolver, intended to compete head-on price-wise with the Ruger Blackhawk, while United Sporting Arms, intending to make a superior (and higher-priced) product, initially produced the Seville in chrome moly steel, and slightly later, the El Dorado revolver out of stainless steel.

The Abilene was manufactured in Riverhead until 1979 or 1980 in calibers .357 and .44 magnum, and possibly the .45 Colt, all in blued steel. The assets of this company were eventually sold to A.I.G., Inc., which was a division of Mossberg. A.I.G. assembled guns from existing parts until 1983, at which time the Abilene production ended. These guns bore a North Haven, CT address, and utilized a distinctive hammer-nose safety device instead of the former transfer bar system. Calibers were the same, and all guns were made from carbon steel. Some guns had a Magnaloy finish, thereby giving rise to the misconception that some Abilenes were made from stainless steel, none were.

Meanwhile, the two remaining original partners began production of the United Sporting Arms Seville revolver in 1977. By late in that year, this company had accomplished several firearms "firsts" with production of the stainless steel El Dorado revolver. This was the first use of 17-4 pH stainless for a revolver frame, far pre-dating Freedom Arms, and was made at a time when Sturm Ruger's engineering department was sending lengthy letters explaining why stainless steel was totally unsuitable for guns chambered for the .44 magnum cartridge. It would be years until the rest of the firearms industry caught up to this fledgling company.

In 1979, one of the remaining partners established a second production facility in Tombstone, Arizona, under the name of United Sporting Arms of Arizona, Inc. Guns made in this plant still utilized frames made in New York, and therefore bore the Hauppauge, N.Y., frame inscription. However, Tombstone-built guns will contain the letter "T" as a suffix to the serial number. In Tombstone, the Silver Seville was born, having a highly-polished stainless grip frame on an otherwise blued gun. This is a striking combination, and has become quite popular on custom guns as well as some limited production runs from other makers. (Neither the guns themselves, nor the official company records reflect this designation, only the boxes for the guns do.) Here, to the .41 magnum and .45 Colt calibers were added to the Seville line. No stainless steel guns were made in Tombstone, Arizona.

Later in 1979, the Arizona facility was relocated to the town of Bisbee, Arizona. Less than 200 guns were made with the Bisbee address. These were all made from blued steel, and were all in .45 Colt or.44 Magnum, except as noted. Oddly enough, in the short time the company was at this location, three very distinct models were produced.

First was the Tombstone Commemorative. Although 200 were commissioned by the city of Tombstone, only about 60 were ever completed. These guns had blued frames, and stainless steel cylinders, barrels and grip frames. Some engraving was present on the cylinder and barrel, and the legend "Tombstone, Arizona 100 years of history 1879-1979" appears in three lines on the barrel. The guns came in a wooden case, and serial numbers began with TC-1. All were in .44-40 WCF caliber.

The second Bisbee gun was the Helldorado. Originally designed for the Old Tucson stunt man group "The Fall Guys," the gun had a flat-top frame with no sights, and was intended for blanks only. Only 4 were made. The final Bisbee introduction, and the only one to survive the next location change, was the Quik Kit. This was an ingenious multi-caliber system of interchangeable barrels and cylinders; invented by Ray Herriott of Centaur Systems. Only about 30 such guns were produced in Bisbee, some in blue and some in stainless. All bore the Centaur logo on the frame and all had the serial number prefix of "QK."

In late 1979, the company moved once again, this time to Tucson, Arizona. By now, the split from the New York concern was completed legally as well as physically, new guns were in blue and stainless, but all were called Sevilles. (The New York operation retained exclusive rights to the El Dorado name.) Also at this time, the frame marking on the guns simply read "Sporting Arms, Inc."

Between late 1979 and the end of 1981, several new variations of the Seville revolver were introduced. Shortly after Ruger announced the Blackhawk SRM in .357 Maximum caliber, United Sporting Arms offered a lengthened-frame stainless steel gun in this caliber. This gun did not suffer from the various maladies which eventually doomed the Ruger version, and was winning silhouette matches long after the demise of the Blackhawk SRM. This model also spawned the awesome .375 USA Seville—the same caliber later renamed the .375 Super Magnum by Dan Wesson. Although only two prototypes of this caliber were made before the next company change, several hundred guns were made in .357 Maximum.

Also during this period the Sheriffs' Model with 3-1/2" barrel was introduced. Most of these guns were produced in chrome moly steel, and most were shipped with a distinctive round-butt "bird's-head" grip frame. This proved very popular, and these guns became a mainstay of the company's line right until the

end. Most of these Sheriffs' Models had fully adjustable sights, but at least three were made with Colt-like fixed sights, all of which, oddly, were convertibles in.45 Colt and .45 ACP.

Guns were produced in calibers 9mm Winchester Magnum, and .45 Winchester Magnum, primarily for export to Europe. A few guns were made in .44-40 and .44 Special. Also introduced was the Hunter Finish, a bead-blasted stainless steel, and the Rawhide finish, with the same treatment to a blued gun. A very few blued guns were made with a brass grip frame, as well as the "Silver Seville" configuration.

In early February of 1982, the company again changed ownership. The company name, and the frame marking on the guns, returned to United Sporting Arms, Inc. About half of the production was devoted to the so-called long-frame guns—.357 Maximum and .375 USA—and about half of these were silhouette guns with 10-1/2" barrels. The .454 magnum (.454 Casull) was added to the line. However, only 30 of these guns were ever made. (Note: perhaps as many as 50 guns in this chambering were made and marked "Sporting Arms, Inc." These guns were NOT made in any United Sporting Arms factory, and are very definitely of sub-standard quality.) These guns were made on a special frame, different from all other caliber guns.

Prototype guns were made—usually two in each caliber. Produced were .41 Super Magnum and .44 Super Magnum (long before Dan Wesson made guns available in .445 and .414 Super Magnums), as well as .375 Special, and, oddly enough, .218 Mashburn Bee. None of these went into regular; production.

Normal production guns were, as to be expected, with blued, stainless steel, "silver" and brass grip-frame guns were all produced. Quite a few bird's-head grip guns were made, not only in the Sherrif's Model configuration. Guns in heavy-recoiling calibers are particularly comfortable to shoot two-handed with this grip configuration. The author has a .454 Magnum Seville with a 6-1/2" barrel and the bird's-head grip frame, and it is by far the most comfortable gun I've ever shot, even with 325 grain bullets at over 1700 fps!

In November of 1985, the company was again sold, and this time it was moved to Post Fails, Idaho. Problems developed almost immediately, and even though it would be three years until the assets were sold (to the previous owners from Tucson), very few guns were ever made; less than 200. The only new product introduced in Idaho was the .32 H&R magnum chambering.

Caution: Several hundred frames "disappeared" from the Idaho plant right before the bankruptcy sale, and several bootleg guns have turned up. These guns are of distinctly dubious quality, as are many of the Idaho-marked guns. Supposedly, the BATF is aware of the situation, and arrests may yet happen.

When the assets of the Idaho plant were sold to the former owners, they had no desire to resume the firearm-manufacturing business, so they shipped the remaining parts, tooling and moulds to Chimney Rock, North Carolina. In a moment you'll see why.

While all this changing of location and ownership was going on, the remaining original partner in Hauppauge, N.Y. had reorganized as El Dorado Arms, Inc., and had been in continuous production of the El Dorado revolver (although on a very limited basis) since 1979. Until the mid-1980s, all El Dorados were made from 17-4 pH stainless steel, and nearly all were chambered for the .44 magnum cartridge.

In 1985, El Dorado Arms relocated to Chimney Rock, N.C., where production continued, and the model line was expanded to include the Laredo in blued steel, and the fixed-sight Rebel in both blued and stainless steel. Also introduced at this time (although at least two prototype guns so chambered had been made in New York) was the .22 long rifle chambering, complete with match chambers, specifically for the silhouette market. Eventually .22 rimfire magnum guns were added.

The only thing lacking from the North Carolina lineup was a long-frame revolver for the Super Magnum calibers. When the remaining Idaho assets were received in North Carolina, not only were there parts for the long-frame gun, but also the molds to produce more parts for these guns. In fact quite a few El Dorado .357 and .375 Super Magnum-chambered guns found their way into the silhouette winner's circle, alongside their smaller brothers.

Ironically, it had taken nine years, but all the components of United Sporting Arms had came full circle, and were reunited under one roof. And this was under the ownership of one of the founders of the original United States Arms!

Production of El Dorado revolvers always was very limited, and it finally ceased for good in 1997 or 1998.

Altogether, only about 6,000 or 7,000 guns were produced by all of the United Sporting Arms/El Dorado Arms companies. (Total production of the Abilene revolver by either United States Arms or A.I.G. is not available). However, even forgetting the eight different frame inscriptions, barrel lengths between 3-1/2" and 10-1/2" were made; there were all-blue, all stainless, blue and stainless, and blue and brass guns, standard finish, "hunter" and "rawhide" finishes as well as high-polish stainless; standard and bird's-head grip-frame guns; Quik-Kits, convertibles and Tombstone Commemoratives; long-frame, short-frame and .454-frame guns. There were also at least 21 different chamberings. Thus, the variations are practically endless.

Quality, except for the very few noted instances, was always very high. An informal United Sporting Arms slogan was that a Seville was what a Super Blackhawk could be if Ruger had a custom shop. Given the truth of this statement, it must be admitted that an El Dorado Arms gun was what a custom Seville could have been.

Advertised prices for Sevilles and El Dorados run the full gamut from bargain "orphaned" gun prices to those reflecting the semi-custom nature of these guns. For the most part, what price stability does exist is on the higher end, and this is as it should be.

For most of the production of United Sporting Arms guns, and some of the El Dorado Arms guns, copies of original factory records are available. For a letter of verification for any particular gun (refunded if no records are available), send $20 to J.C. Munnell, 633 Long Run Rd., McKeesport, PA 15132.

Two examples of Quik-Kit revolvers. At the top is a Ruger reworked by United Sporting Arms, Inc. of Tucson and at the bottom is a standard production revolver from the same company.

These two United Sporting Arms, Inc. of Bisbee, Arizona, revolvers are the sightless Heldorados.

Three different barrel lengths of the long frame Seville. From top to bottom; 10-1/2", 7-1/2", and 6-1/2". All of these revolvers were made by United Sporting Arms, Inc. of Tucson, Arizona.

Deduct 20 percent if United Sporting Arms, Post Falls, ID. Add 20 percent if El Dorado Arms (either N.Y. or N.C.). Add 10 percent for 1-1/2" barrel Sheriff's Model. Add 20 percent for 10-1/2" barrel. Add 20 percent for bird's-head grip frame. Add 20 percent if brass grip frame.

UNITED STATES ARMS

Otis A. Smith Company
Rockfall, Connecticut

Single-Action Revolver

A .44 rimfire and centerfire single-action revolver with a 7" barrel and integral ejector. The hammer nose is fitted with two firing pins so that rimfire or centerfire cartridges can be used interchangeably. The barrel marked "United States Arms Company - New York," the top strap "No. 44." Blued with either hard rubber or rosewood grips. Manufactured in limited quantities. Circa 1870 to 1875.

UNITED STATES HISTORICAL SOCIETY

Richmond, Virginia

The arms listed are manufactured by the Williamsburg Firearms Manufactory and the Virginia Firearms Manufactory. This company ceased business under this name in 1994 and resumed business under the name of America Remembers in Mechanicsville, Va.

UNITED STATES FIRE ARMS MFG.

(Formerly United States Patent Firearms Mfg. Co.)
Hartford, Connecticut

This company began business in 1992. The company uses parts manufactured in the U.S. and fits, finishes, and assembles the gun in Hartford. Produces a wide variety of extremely high-quality replica arms.

NOTE: This company offers a wide variety of special order options on its revolvers, from special bluing to grips to engraving. These special order options will affect price to a significant degree.

Single-Action Army Revolver

Offered in a wide variety of calibers including .22 rimfire, .32 WCF, .38 S&W, .357 Magnum, .38-40, .41 Colt, .44 Russian, .44-40, .45 Colt, and .45 ACP. Barrel lengths are 4.75", 5.5", and 7.5" with or without ejector. A modern cross pin frame is available for an additional $10. Prices listed are for standard grips and finish, Armory bone case finish, and Dome blue finish.

VOLCANIC ARMS COMPANY

New Haven, Connecticut

SEE—Winchester Repeating Arms Co.

VOLKSPISTOLE

Various Makers
Germany

Volkspistole

Quite mysterious, a few have ever been noted. It was designed as a cheaply manufactured, last-ditch weapon that was supposed to be used to flood the German countryside and cause casualties among the invaders at the close of WWII. It is chambered for the 9mm Parabellum cartridge and features a gas-operated, delayed blowback action. It has a 5.1" barrel with an 8-round, detachable box magazine. The construction is of steel stampings. It has no safety devices and no markings whatsoever. Examples noted are in the white, and there are no sights affixed to them. It appears that this weapon never actually went into production, and it would be impossible to estimate a value.

VOLQUARTSEN CUSTOM

Carroll, Iowa

This company was started in 1973, and began specializing in Ruger 10/22 aftermarket conversions. In 1997 the company began producing its own receivers.

SEMI-AUTO RIFLES

These rifles are based on the Ruger 10/22 design. They are chambered for the .22 LR or .22 WMR cartridge.

Standard

Fitted with an 18.5" stainless steel barrel and either a Hogue rubber stock or brown laminated stock. No sights. Integral Weaver rail.

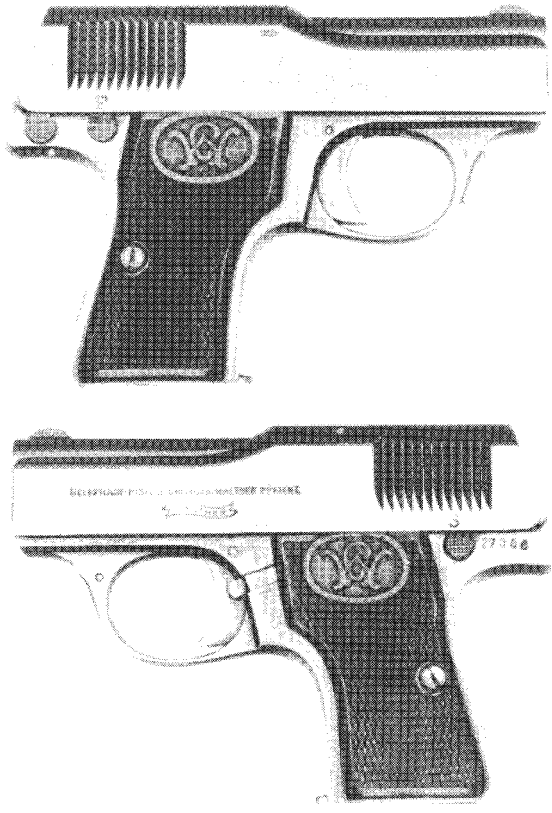
WALTHER, CARL
Zella Mehilis and Ulm/Donau, Germany

In 1886 Carl Walther set up a workshop to make sporting arms. Until 1900 his operation remained small. In 1907 he designed the 6.35mm blowback pistol. This design was offered for sale in 1908. In less than a year after the introduction of the first pistol the second model was introduced. Called the Model 2, this pistol was more advanced than the first design and became a popular handgun in Germany prior to WWI. Two years later the Model 3 was introduced and successive models were designed and produced through 1921 when the Model 9 was announced. In 1929 Walther built the now famous Model PP, Polizei Pistole, which became synonymous with quality and advanced design. The Walther legend was born and has been maintained up to this date as a fine high-quality German-built pistol. After WWII the Walther company relocated in Ulm/Donau, Germany.

Editor's Comment: There are a large number of Walther variations, especially during the WWII era, and it requires years of experience to learn the subtleties of these variations. When dealing with expensive Walther pistols it is suggested that an expert appraisal be obtained before buying or selling these highly collectible handguns.

Model 1
A 6.35mm semi-automatic pistol barrel lengths of 2"-6". Blued with checkered hard rubber grips with the Walther logo on each grip. Introduced in 1908.



Courtesy James Rankin

Sport Model 1926
Walther Standard Sport
Sport Model Target
Walther Hammerless Target 22
Walther 1932 Olympia
Special Stoeger Model

All of these .22 LR caliber semi-automatic pistols are the same target pistol introduced by Walther in 1926. A well-made pistol with a barrel length of between 6"-16". It has one-piece checkered wrap-around wood grips. There was also a .22 Short version of the Olympia model produced for rapid fire Olympic shooting. There was also a torpedo-shape target weight available for shooters.

850	650	450	350	250

NOTE: Add $200 for target weight. Add $500 for case.

Walther 1936 Olympia

This semi-automatic target pistol in .22 caliber resembled the earlier 1932 Olympia, but with many improvements. There were four standard models produced with many variations of each one. These variations included many barrel lengths, and both round and octagon barrels. There were duraluminum slides, frames and triggers. Various weight configurations to as many as four separate weights to one gun. One-piece wrap-around checkered wood grips in different configurations for the individual shooter. Produced until 1944. The four models were:

Funfklamph Pentathlon
Jagerschafts—Hunter
Sport or Standard Model
Schnellfeur—Rapid Fire

Model PP

A semi-automatic pistol in .22, .25, .32 and .380 caliber. Introduced in 1928. It was the first successful commercial double-action pistol. It was manufactured in finishes of blue, silver, and gold, and with three different types of engraving. Grips were generally two-piece black or white plastic with the Walther banner on each grip. Grips in wood or ivory are seen, but usually on engraved guns. There are many variations of the Model PP and numerous NSDAP markings seen on the pre-1946 models that were produced during the Nazi regime. All reflect various prices.

Model PP Mark II

These Walthers were manufactured under license by Walther and produced by the Manurhin Company. They were sold exclusively by Interarms, Alexandria, Virginia. The Mark IIs were the same pistols as those above and have the same types of finish and engraving as well as the same value.

Model PP Manurhin

Manurhin Company manufactured with Manurhin logo and inscription. Usually "licensed by Walther" somewhere on the pistol. The same pistols as those above, bearing the same types of finish and engraving, and having the same values.

Model PP Sport, Manurhin

.22 caliber. This is the same gun as the Model PP with different barrel lengths running from 5-3/4" to 7-3/4". It is basically a target .22 with adjustable rear sights for elevation and windage. The front sight is also adjustable. There is a barrel bushing at the muzzle that attaches the front sight to the barrel. The grips are contoured checkered plastic and are either squared at the bottom of the grips or are in the shape of an inverted bird's-head.

Exc.	V.G.	Good	Fair	Poor
900	600	450	375	275

Model PP Sport C, Manurhin

.22 caliber. This is the same gun as the Model PP Sport but in single-action with a spur hammer. It has front and rear adjustable sights and squared target grips in checkered black, brown and plastic. Blued and silver finish.

Exc.	V.G.	Good	Fair	Poor
900	600	450	375	275

Model PP Sport, Walther

A .22 caliber Sport was manufactured by Manurhin, but sold by Walther with the Walther logo and inscription. This is the same gun as the Model PP Sport, Manurhin. Only sold for a period of two years.

WARNER ARMS CORPORATION

Brooklyn, New York and Norwich, Connecticut

Established in 1912, this firm marketed revolvers, rifles, semi-automatic pistols and shotguns made for them by other companies (including N.R. Davis & Sons, Ithaca Gun Company and so forth). In 1917, the company was purchased by N.R. Davis & Company. *See also Davis-Warner.*

The arms marketed by Warner Prior to 1917 are listed.

SHOTGUNS

Single Trigger Hammerless Utica Special Double-Barrel

In 12 gauge with 28", 30", or 32" barrels.

Double Trigger Hammerless Double-Barrel

In 12 or 16 gauge with 28", 30", or 32" barrels.

Grade X, SF, XT, SFT, XD and XDF Hammer Guns

In 12, 16 or 20 gauge with 28", 30", or 32" barrels.

Field Grade Hammer Gun

In 12 or 16 gauge with 28" or 30" barrels.

Boxlock Hammerless

In 12 or 16 gauge with 28", 30", or 32" barrels.

RIFLES

Number 522

A .22 caliber single-shot rifle with an 18" barrel.

Number 532

A .32 caliber single-shot rifle with an 18" barrel.

REVOLVERS

Double-Action

.32 and .38 caliber with 4" or 5" barrels.

Double-Action Hammerless

.32 and .38 caliber with 4" or 5" barrels.

SEMI-AUTOMATIC PISTOLS

WARNER, JAMES

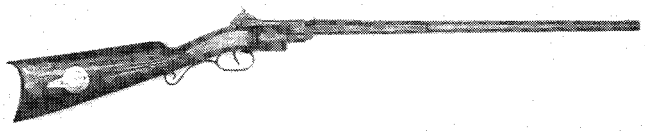
Springfield, Massachusetts

Revolving Carbines

A variety of revolving carbines were made by this maker, nearly all of which are of .40 caliber, with octagonal barrels measuring 20" to 24" in length. The most commonly encountered variations are listed.

Manually Revolved Grooved Cylinder

This model is fitted with two triggers, one of which is a release so that the cylinder can be manually turned. Not fitted with a loading lever. The top strap marked "James Warner/Springfield, Mass." Approximately 75 were made in 1849.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	4700	2200	500

Retractable Cylinder Model

This version has a cylinder that fits over the breech, and it must be retracted before it can be manually rotated. The cylinder release is a button located in front of the trigger. It is marked "James Warner/Springfield Mass" and with an eagle over the letters "U.S." The cylinder is etched, and there is no loading lever. It also has a walnut stock with patch box and no forearm. There were approximately 25 manufactured in 1849.

Exc.	V.G.	Good	Fair	Poor
—	—	6900	3000	800

Automatic Revolving Cylinder

The cylinder is automatically turned when the hammer is cocked. This model is fitted with a loading lever and is marked "Warner's Patent/Jan. 1851" and "Springfield Arms Co." Approximately 200 were made during the 1850s.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

WATSON BROTHERS

London, England

SEE—British Double Guns

WEATHERBY

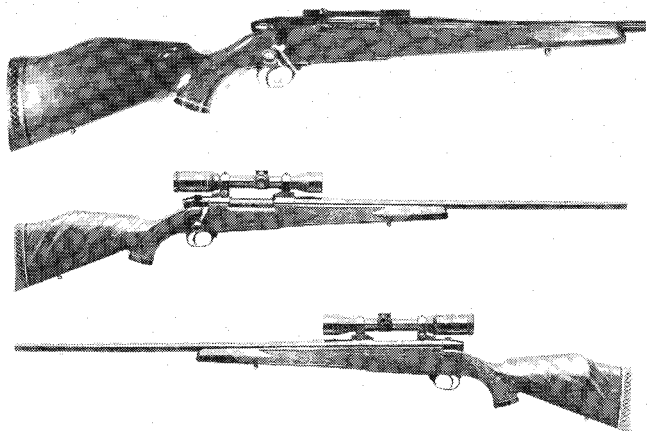
Atascadero, California

This corporation was founded in 1945 by Roy Weatherby. He pioneered the high-velocity hunting rifle. His rifles were designed to fire cartridges that he also produced. They are examples of fine craftsmanship and have been used to take some of the top trophy animals from all around the world. Formerly these rifles were manufactured in West Germany. They are currently produced in Japan. Although the Japanese rifles are, in the opinion of the editors, every bit as fine a firearm as the German versions, collectors have given an approximate 25 percent premium to the German-manufactured versions. The values given are for the current-production Japanese weapons. Simply add the premium for a German-manufactured rifle. There are other premiums that collectors are paying in 1994 and these are listed.

NOTE: For German manufacture in calibers .224 through .300 add 25 percent for 24" barrels and 35 percent for 26" barrels.

Mark V

This is a deluxe, bolt-action repeating rifle chambered for various popular standard calibers, as well as the full line of Weatherby cartridges from .240 Weatherby Magnum to .300 Weatherby Magnum. It is furnished with either a 24" or 26" barrel without sights. It has either a 3- or 5-round magazine, depending on the caliber. It has a deluxe, high-polish blued finish with a select, skip-line checkered walnut stock with a rosewood forearm tip and pistol grip cap. This rifle is available with a left-hand action.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1000	850	700	600	500	400

Weatherby Mark V Deluxe

Step-up version of classic Mark V. Features include deluxe Claro walnut Monte Carlo stock with rosewood forend, 26-inch or 28-inch high-polish blued sightless barrel. Chambered in .257, .270, 7mm, .300, .340, .378, .416, and .460 Weatherby Magnum. MSRP: $2500.

Mark V Sporter

Introduced in 1993 this model is identical to the Mark V Deluxe without the custom features. The metal is a low luster finish, the stock is Claro walnut with high gloss finish. A Monte Carlo comb with raised cheekpiece and black 1" recoil pad are standard features on this model. Available in Weatherby calibers from .257 through .340 plus .270 Win., .30-06, 7mm Rem. Mag., .300 Win Mag., .338 Win. Mag. Weighs 8 to 8.5 lbs. depending on caliber.

5000	3500	3000	2500	2000	1500

Mark V .378 Weatherby Magnum

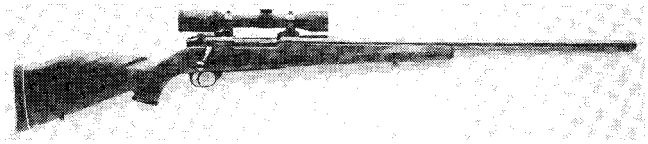
This version is chambered for the .378 Weatherby Magnum cartridge and is considered to be one of the most powerful rifles currently available in the world. It is furnished with a 26" barrel only.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	900	700	500	450	400

NOTE: For German guns in this caliber add 50 percent.

Mark V .416 Weatherby Magnum

This is an extremely powerful rifle suitable for hunting the biggest game. It is the first new caliber to be released by Weatherby since 1965. It was introduced in 1989.



NIB	Exc.	V.G.	Good	Fair	Poor
1100	900	700	—	—	—

Mark V .460 Weatherby Magnum

This is said to be the most powerful commercial rifle available in the world, with the possible exception of some of the recently-reintroduced British nitro chamberings. It is considered to be overkill for any game except the largest and most dangerous creatures that roam the African continent. It is available with a 24" or 26" heavy barrel with an integral, recoil-reducing muzzlebrake. It has a custom reinforced stock.

NIB	Exc.	V.G.	Good	Fair	Poor
1350	1200	1000	800	—	—

NOTE: For German guns in this caliber add 100 percent.

Mark V .340 Weatherby Magnum

This version is chambered for a larger magnum cartridge and is offered with the 26" barrel only.

1050	900	750	650	550	400

NOTE: For German guns in this caliber add 70 percent.

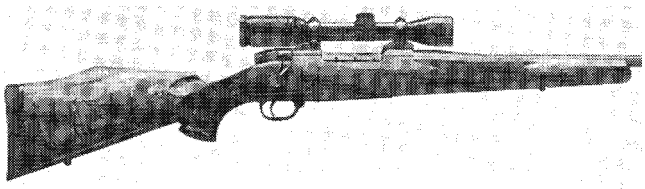
Mark V Dangerous Game Rifle

This model was introduced in 2001 and features a synthetic stock with Monte Carlo and 24" or 26" barrel with barrel band and hooded front sight depending on caliber. Chambered for the .378 Weatherby Mag., .416 Weatherby Mag., and the .460 Weatherby Mag. Adjustable trigger. Weight is between 8.74 and 9.5 lbs. depending on caliber. In 2003 the .458 Lott was offered for this model.

NIB	Exc.	V.G.	Good	Fair	Poor
2890	2250	—	—	—	—

Mark V Euromark

This model features a hand-checkered, oil-finished, Claro walnut stock with an ebony forend tip and pistol grip cap. It has a satin blued finish. It was introduced in 1986.



NIB	Exc.	V.G.	Good	Fair	Poor
1050	900	750	650	—	—

Mark V Fluted Stainless

Introduced late in 1996 this model features a fluted stainless steel barrel chambered for the .257 Weatherby Magnum to the .300 Weatherby Magnum calibers as well as the 7mm Rem. Mag. and the .300 Win. Mag. The stock is synthetic with raised comb and checkered stock. Weight varies depending on caliber.

NIB	Exc.	V.G.	Good	Fair	Poor
1100	850	700	500	—	—

Mark V Fluted Synthetic

This model is similar to the above model with a blued carbon steel action and barrel with synthetic stock. Introduced late in 1996.

NIB	Exc.	V.G.	Good	Fair	Poor
900	725	600	—	—	—

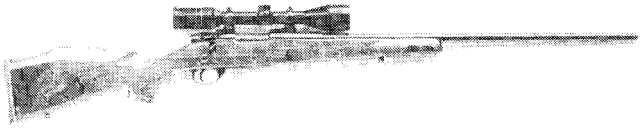
Mark V SLS

This model features a stainless steel barreled action with laminated wood stock fitted with a 1" black recoil pad. Rifle is chambered for .257 through .340 Weatherby Magnum calibers as well as 7mm Rem. Mag., .300 and .338 Win. Mag., and the .375 H&H Mag. Weight is about 8.25 lbs. depending on caliber. Introduced in late 1996.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	950	750	—	—	—

Mark V Varmint

This version is chambered for the .22-250 and the .224 Weatherby cartridge. It is offered with a 24" or 26" heavy barrel.



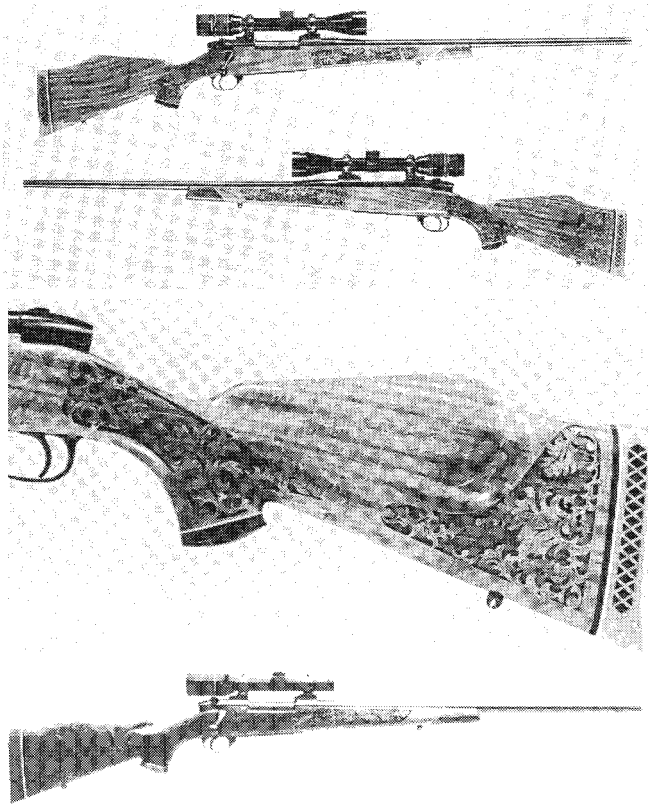
NIB	Exc.	V.G.	Good	Fair	Poor
975	800	750	550	450	400

NOTE: For German built add 50 percent.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Mark V Lazermark

This version had a laser-carved pattern on the stock and forearm in place of the usual checkering. It was introduced in 1985.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1100	1000	800	700	—	—

Mark V Fibermark Composite

This version has a matte blue finish and is furnished with a synthetic black, wrinkle-finished stock. Chambered for calibers from .22-250 to .375 H&H with barrel lengths from 24" to 26" depending on caliber.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
900	700	—	—	—	—

NOTE: Add $200 for stainless steel models.

Mark V Ultramark

This is a custom-finished version with a glass-bedded action and a special, high-polish blue. The action is hand-honed, and the walnut stock features basket weave checkering. It was introduced in 1989.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1250	1150	900	750	—	—

Mark V Accumark

Introduced in 1995 this rifle features a Mark V Magnum action. The trigger is preset at the factory for 3.5 lbs. of pull. It is fully adjustable for sear engagement at let-off weight. The action metal is black oxide coated with a bead blast matte finish. The stainless steel barrel is 26" in length with a low luster brushed finish. Weight is approximately 8 lbs. and is offered in caliber from .257 to .340 Weatherby Magnum, 7mm Rem. Magnum, and .300 Win. Magnum. In August the company announced that this model would also be offered in the .30-.378 Weatherby caliber. In 1997 this model was offered chambered for the 7mm STW cartridge. Available in right-hand only.

900	750	425	250	100

Model 1884 R.I.C. Naval

As above, with a brass frame and oxidized finish. Barrel length 2.75" and of octagonal form.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
2250	1650	1225	600	500

British Bulldog

Similar to the new Model 1883 R.I.C. blued, checkered walnut grips. Those engraved on the back strap "W.R.A. Co." were sold through the Winchester Repeating Arms Company's New York sales agency and are worth a considerable premium over the values listed. Manufactured from 1878 to 1914.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
900	550	325	200	150

NOTE: Add a premium for U.S. dealer markings, see model description.

Pug

Similar to the British Bulldog but somewhat smaller. Interesting in that it has a manual safety. Chambered in .450, .442, and possibly others as well.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
800	500	325	200	150

Model 1878 Army Express Revolver

A .455 caliber double-action revolver with a 6" barrel and integral ejector. Blued with one-piece walnut grips.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
2100	1500	850	500	350

NOTE: Add 100 percent premium for single-action version. Add 25 percent for .450 Long (.45 Colt) markings.

Webley Kaufmann Model 1880

A top break, hinged-frame double-action revolver chambered for the .450 centerfire cartridge, with a 5.75" barrel and a curved bird's-head butt. Blued, with walnut grips.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
2300	1000	800	—	—

Webley-Green Model

A double-action, top break revolver chambered for the .455 cartridge, with a 6" ribbed barrel and a 6-shot cylinder. The cylinder flutes on this model are angular and not rounded in shape. Blued, with checkered walnut, squared butt grips with a lanyard ring on the butt. Introduced in 1882 and manufactured until 1896. Also known as the "WG" model.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1900	1350	700	—	—

Mark I

A .442, .455, or .476 double-action top break revolver with a 4" barrel and 6-shot cylinder. Blued with checkered walnut grips. Manufactured from 1887 to 1894.

WEBLEY SEMI-AUTOMATIC PISTOLS

Text by Joseph Schroeder

Webley's first attempt to enter the new self-loading pistol field occurred in the 1890s, when they actually made a few prototype Gabbet-Fairfax "Mars" pistols (see under Gabbet-Fairfax) before deciding that the design was hopelessly complicated and impractical. They then enjoyed some success with the Webley-Fosbery automatic Revolver, a natural for England's premier revolver maker, while experimenting with semi-automatic pistol designs in the 1903-1905 period. Their first commercial pistol, the .32 caliber 1905, was quickly followed by a variety of related designs in various calibers. An interesting sidebar on Webley commercial self-loading pistols is that they were all numbered in the same series, so serial numbers bear no relation to the quantity of a given model actually produced, but do indicate when they were made.

Webley-Fosbery Automatic Revolver

Recoil forces the top half of this unusual pistol back to cock the hammer, while a stud in the frame cams the cylinder around to bring a fresh chamber into position. Early examples under serial number 75 or so appear to be hand-made as no two seem to be identical; these bring a 100 percent premium over late-model pistols. Other low-number guns, under serial number 300 or so, also differ in appearance from the later production and bring a 25 percent premium. Early production was all in .455 Webley with a 6-round cylinder; a .38 ACP version with an 8-round cylinder was introduced about 1903 but is much scarcer than the .455.

Courtesy Joseph Schroeder

.455 Caliber

Exc.	V.G.	Good	Fair	Poor
9000	4500	3000	2000	1250

.38 Caliber

Exc.	V.G.	Good	Fair	Poor
10000	7250	4500	3000	2000

Model 1904

Made experimentally in both .38 ACP and .455 calibers, the highest serial numbered 1904 known is in the 30s and very few seem to have survived. A later Webley experimental, the Model 1906, made in .45 for the U.S. Army trial but apparently never submitted. Either model is too rare to price.

Model 1904

Courtesy Joseph Schroeder

A Webley Fosbery Model 1902 semi-automatic revolver in .38 caliber sold at auction for $14,950. Fitted with a 6" barrel. Condition is 95 percent blue.
Bonham & Butterfield

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Model 1906 Courtesy Joseph Schroeder

Model 1905

Webley's first commercial semi-automatic pistol was this compact .32 caliber. The earliest Model 1905s have a diagonal flat machined on the slide and a hammer-mounted safety; these bring about a 50 percent premium. The Model 1905 was replaced by the Model 1908 after about perhaps 20,000 were made.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
850	600	400	250	150

NOTE: Prices listed apply only to the Model 1905.

Model 1907

The 1907 is a .25 caliber pistol with an outside hammer and was one of Webley's most popular handguns; it remained in production until WWII and over 50,000 were made.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
550	375	275	175	100

Model 1908

The Model 1908 is a slight redesign of the Model 1905. Webley's most popular self-loading pistol, it remained in production until WWII. Examples bearing a crown and the letters "MP" were made for the Metropolitan Police and bring a slight premium.

Exc.	V.G.	Good	Fair	Poor
650	550	350	175	125

Model 1909

The Model 1909 is a modified and enlarged version of the Model 1908, chambered for the 9mm Browning Long cartridge. It was never popular, and manufacture ended in 1914 with just under 1,700 made. Its most unusual feature was the slide release on top of the slide.

Courtesy Joseph Schroeder

Courtesy J.B. Wood

Exc.	V.G.	Good	Fair	Poor
1475	850	500	300	200

Model 1910 .380

The Model 1910 .380 was simply a Model 1908 modified to accept the .380 cartridge. Never very popular, under 2,000 were sold.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
1500	875	525	—	—

Model 1910 .38 ACP

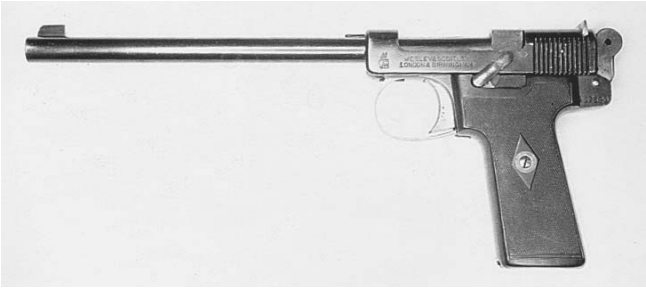
This was Webley's first locked-breech pistol, based closely on the experimental Model 1906 design and chambered for the .38 ACP cartridge. There are two models, both with internal hammers, but one with a grip safety and the later without. Total production for both was under 1,000, so both are rare.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
2250	1500	900	500	350

Model 1911

The Model 1911 is a single-shot .22 caliber training version of the Model 1908, and developed specifically for the Metropolitan Police. It features a "blow open" action that ejects the fired cartridge but remains open for reloading, and the bottom of the frame is slotted for attaching a shoulder stock. Stocks are quite rare, and will probably add more than 100 percent to the value of the pistol.



Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
1000	750	500	—	—

Model 1912

A perceived need for a hammerless version of the Model 1907 .25 caliber led to the introduction of the Model 1912. It actually does have an internal hammer, but the recoil spring is two coils in the slide instead of the large V-spring under the right grip frame found in all other Webley semi-automatic pistols. Not as popular as the Model 1907, production totaled almost 15,000 vs. over 50,000 for the hammer model.

Exc.	V.G.	Good	Fair	Poor
675	450	350	225	125

Model 1913

The Model 1913 was the result of years of development in conjunction with the British government and was finally adopted in 1913 as the Model 1913 MK1N for Royal Navy issue. It has the same breech-locking system as the Model 1910, but has an external hammer and is chambered for the .455 Webley Self-Loading cartridge. About 1,000 Model 1913s were sold commercially and serial-numbered along with the smaller-caliber pistols. In 1915 a variation of the Model 1913 with butt slotted for a shoulder stock, an adjustable rear sight, and a hammer safety adopted for use by the Royal Horse Artillery. Shoulder stocks are very rare, and will double values listed for the RHA model. All militaries were numbered in their own series; about 10,000 made in both variations.

Exc.	V.G.	Good	Fair	Poor
1950	1200	800	500	300

Model 1913 (RHA model)

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
2500	2000	1500	850	600

Model 1922

The Model 1922 was a redesign of the Model 1909 in hopes of military adoption. The grip safety was replaced by a manual safety mounted on the slide, the grip angle was changed, and a lanyard ring added to the butt. Unfortunately for Webley its only official use was by the Union Defence Force of South Africa (1,000 pistols). South African guns are marked with a large "U" with an arrow in it and bring a 20 percent premium.

WESSON FIREARMS, DAN

Norwich, New York

In 1996 the assets of the Wesson Firearms Co. were purchased by the New York International Corp. All interchangeable barrel models were produced. There are no plans at this time to build fixed barrel models. At the present time, parts and service for original Dan Wesson revolvers are available from the new company. Full production of new models occurred in 1997. These firearms are laser marked on the barrel or frame with: "NYI" in an oval and below "DAN WESSON FIREARMS" on the next line "NORWICH, NEW YORK USA."

NOTE: In April, 2005 Dan Wesson Firearms was acquired by CZ-USA. Production continues (somewhat irregularly) at the Norwich, New York, facility.

NEW GENERATION SMALL-FRAME SERIES

NOTE: The "7" prefix denotes stainless steel frame and barrel. For models listed add between 4 percent and 9 percent depending on barrel length and for stainless steel.

Model 22/722

This is a 6-shot revolver chambered for .22 caliber cartridge. Interchangeable barrel lengths are 2.5", 4", 5.6", 8", and 10". Adjustable rear sight and interchangeable front sight. Hogue finger groove rubber grips. Weight is 36 oz. for 2.5" barrel and 58 oz. for 10" barrel.

WESSON FIREARMS CO., INC.

Palmer, Massachusetts

The company was founded in 1968 by Daniel B. Wesson, the great-grandson of D.B. Wesson, co-founder of Smith & Wesson. This line of handguns is unique for its barrel/shroud interchangeability. Dan Wesson revolvers have established themselves as champion metallic silhouette competition guns. The company offers a comprehensive line of handguns for almost every use. The company will also custom build a handgun to customer specifications. Dan Wesson Arms was restructured on January 4, 1991, and identified as Wesson Firearms Company, Inc. Wesson handguns made after this date will be stamped with this new corporate name. In 1995 the company declared bankruptcy. (See WESSON FIREARMS, DAN.)

Model 11

WESSON, FRANK

Worcester, Massachusetts
Springfield, Massachusetts

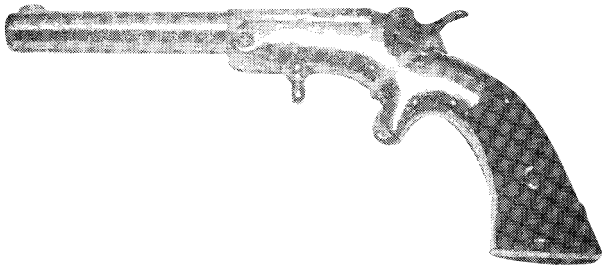
Manual Extractor Model

A .22 caliber spur trigger single-shot pistol with a 4" octagonal barrel and thin brass frame. The barrel release is located in the front of the trigger. No markings. Approximately 200 were made in 1856 and 1857.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	950	400	100

First Model Small Frame

As above, with a 3", 3.5", or 6" half-octagonal barrel. Blued with rosewood or walnut grips. The barrel marked "Frank Wesson Worcester Mass/Pat'd Oct. 25, 1859 & Nov. 11, 1862." Serial numbered from 1 to 2500.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	575	225	75

Second Type

As above, with a flat sighted frame and a circular sideplate.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	575	225	75

First Model Medium Frame

As above, in .30 or .32 rimfire with a 4" half-octagonal barrel and an iron frame. Approximately 1,000 were made between 1859 and 1862.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	600	225	75

Medium Frame Second Model

As above, with a longer spur trigger and a slightly wider frame at the barrel hinge. Manufactured from 1862 to 1870.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	600	225	75

Small Frame Pocket Rifle

A .22 caliber spur trigger single-shot pistol with a 6" half octagonal barrel and narrow brass frame. This model is adopted for use with a detachable skeleton shoulder stock. The barrel marked "Frank Wesson Worcester, Mass." Manufactured from 1865 to 1875 with approximately 5,000 made.

Pistol Only

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	925	350	100

NOTE: Matching shoulder stock add 100 percent.

Medium Frame Pocket Rifle

As above, in .22, .30, or .32 rimfire with a 10" or 12" half octagonal barrel. Approximately 1,000 were made from 1862 to 1870.

Pistol Only

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	500	200	75

NOTE: Matching shoulder stock add 100 percent.

Model 1870 Small Frame Pocket Rifle

As above, in .22 caliber with a 10", 12", 15", or 18" or 20" half octagonal barrel that rotates to the side for loading. This model was made with either a brass or iron frame. It has a half cocked notch on the hammer.

Pistol Only

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	550	200	75

NOTE: Matching shoulder stock add 100 percent.

1870 Medium Frame Pocket Rifle First Type

As above, but with a slightly larger frame chambered for .32 rimfire. Approximately 5,000 were made from 1870 to 1893.

Pistol Only

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	500	175	75

NOTE: Match shoulder stock add 100 percent.

1870 Medium Frame Pocket Rifle Second Type

As above, with an iron frame and a push-button half cocked safety.

Pistol Only

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	475	175	75

NOTE: Match shoulder stock add 100 percent.

1870 Medium Frame Pocket Rifle Third Type

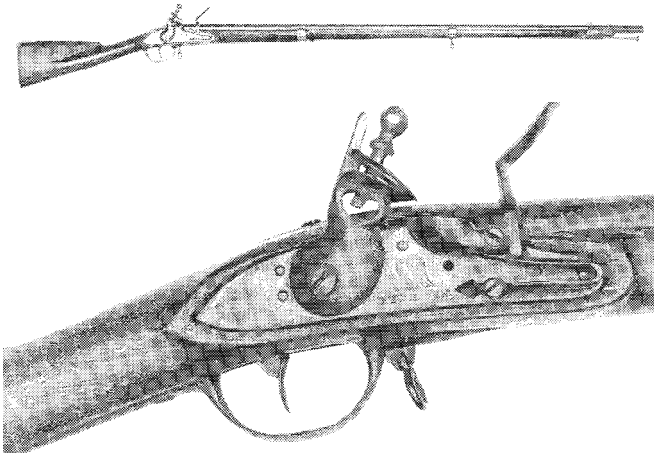
WHITNEY ARMS COMPANY

INCLUDING
ELI WHITNEY, SR. / P. & E.W. BLAKE / ELI WHITNEY, JR.

As the United States' first major commercial arms maker, Eli Whitney's New Haven plant, which began production in 1798 and continued under family control for the next 90 years, was one of the more important American arms manufactories of the 19th century. Its products, accordingly, are eminently collectible. Moreover, during its 90 years of operation, the Whitney clan produced a number of unusual arms, some exact copies of regulation U.S. martial longarms, others variations and derivatives of U.S. and foreign longarms, a variety of percussion revolvers, and finally a variety of single-shot and repeating breechloading rifles in an attempt to capture a portion of the burgeoning market in these cartridge arms during the post-Civil War period. Contrary to the prevailing myth, Eli Whitney, Sr., who also invented the cotton gin, did NOT perfect a system of interchangeability of parts in the arms industry. His contributions in this line were more as a propagandist for the concept that was brought to fruition by others, notably Simeon North and John Hall.

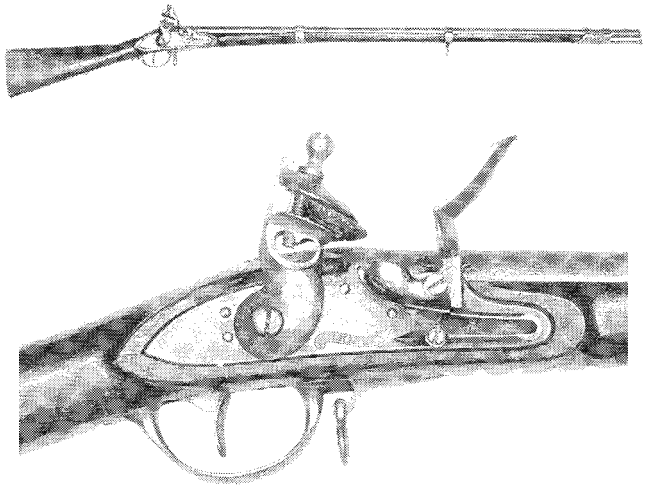
Eli Whitney, Sr. Armory Muskets, 1798-1824. 1798 U.S. Contract Muskets, Types I-IV



On 14 January 1798, Eli Whitney, Sr., having convinced the U.S. War Department that he could mass-produce interchangeable parts muskets, was awarded a contract for 10,000 muskets following the "Charlesville" (French M1766) pattern, then also being copied at the newly opened Springfield Armory and most of the U.S. musket contractors. Whitney's 1798 contract muskets measure between 58-7/8" and 57-3/4" in overall length, with the longer arms delivered earlier. The .69-caliber smoothbore barrels measure approximately 44", though most are shy of that length by anywhere from 1/16" to a maximum of 1-1/4". Lockplates are flat with a beveled edge and are marked "U.STATES" in a curve on the pointed tail and with a perched eagle with down folded wings over "NEW HAVEN" forward of the cock. Four differences in the material and manner of attachment of the pan distinguish the subtypes. The first deliver of 500 muskets in September of 1801 had an integral, faceted iron pan (Type I); the second delivery of 500 muskets in June of 1802 also had faceted iron pans, but were detachable (Type II). The 1,000 muskets delivered in September of 1802 and March of 1803 had faceted, detachable pans, but these were made of brass instead of iron (Type III). The final 8,000 muskets, delivered between 1803 and 1809, had detachable brass pans with a rounded bottom that Whitney copied from the French M1777 musket (Type IV) and a rounded cock, also copied from the French M1777 musket. Generally speaking, due to the limited production of Types I - III, they should command a higher price; prices are given for the more common Type IV 1798 contract musket. It should be noted however, that about 1804 Whitney delivered 112 Type IV muskets to Connecticut's "1st Company of Governor's Foot Guards." Although similar to the Type IV musket, these 112 arms are distinguished by the absence of the "U.STATES" on the tail of the lock and the addition of the name "CONNECTICUT" to the left side plate. Such an arm should demand a considerable premium over the usual Type IV musket.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4500	2000	500

Whitney Connecticut, New York, and U.S. 1812 Contract Muskets



In 1808, Whitney received a contract from the state of New York for 2,000 muskets. In 1810, he received a second contract from the same source for an additional 2,000 muskets, all of which were eventually delivered by mid-1813. In the interim, in 1809, the state of Connecticut contracted with Whitney to deliver 700 muskets per year over the next three years. With the outbreak of the War of 1812, in July of 1812, a contract was let to Eli Whitney for 15,000 muskets (later extended by another 3,000 muskets), conforming to the pattern he had made for the state of New York, but with 42"-long barrels. All of these contract muskets shared most of the same features. Overall length was 58". The .69-caliber smoothbore barrel was nominally 42", though the two state contracts did not rigidly enforce that dimension. The lockplate of these muskets bore the inscription "NEW HAVEN" within a curving scroll forward of the cock. Like the Type III 1798 U.S. contract muskets, the lockplates incorporated a detachable round-bottomed brass pan and a round faced cock. The stock was distinguished by having a low, virtually nonexistent comb similar to that of the 1816 musket pattern. The New York state contract muskets are distinguished by having the state ownership mark "SNY" on the axis of the barrel near the breech. (It should be noted that the first 1,000 muskets delivered under the U.S. 1812 contract were also delivered to New York, but these have the mark across the breech at right angles to the axis of the barrel.) The Connecticut contract muskets are distinguishable by having the state-ownership mark "S.C." (for "state of Connecticut" on the barrel and the top of the comb of the stock. On Connecticut muskets in better condition, the Connecticut coat of arms (a shield with three clusters of grape vines) should also be visible struck into the wood on the left side of the musket opposite the lock. Verifiable Connecticut and New York contract muskets should bring a premium over the U.S. contract muskets.

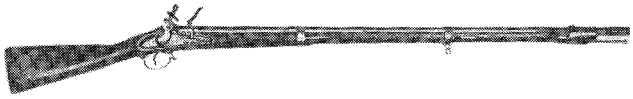
REMINDER

The figures listed in this book reflect relative values, not prices. Only the buyer and seller can determine price.

Whitney (and P. & E.W. Blake) U.S. M1816/1822 Contract Muskets



The U.S. M1816/1822 muskets manufactured at Whitney's Armory were identical to those produced at the U.S. Armories at Springfield and Harpers Ferry. The overall length was 57-3/4". The 42"-long, .69-caliber smoothbore barrels were finished with a browning solution until 1831; after that date the metal was left in the polished "bright." The stock and the lock reflect Whitney's earlier attempts impart his design elements into the U.S. patterns. The stock had the low comb of his M1812 musket and the lock incorporated the rounded cock and round bottomed brass pan that he had championed from the French M1777 musket. The lock markings varied during the period that the arm was produced, though all were marked on the pointed tail with the vertical stamp: "NEW HAVEN" arced around the date (1825-1830), or in three vertical lines: "NEW / HAVEN / (date: 1831-1842)." Those made between 1825 and 1830 under the direct supervision of Whitney's nephews bore the two line mark "U.S. / P. & E.W. BLAKE" forward of the cock; those made from 1830 to 1837 bear the "U.S" over "E. WHITNEY" with a crossed arrow and olive branch between; after 1837 the crossed arrow and olive branch motif was eliminated in favor of the simple two lines. In addition to the Whitney Armory's federal contracts, Whitney executed at least one contract with the state of South Carolina in the mid-1830s for an estimated 800 to 2,000 muskets. Basically identical in configuration to the federal contract muskets, the South Carolina muskets were distinguished by the substitution of "S.C." for "U.S." over the "E. WHITNEY" stamp of the lockplate. They also bear the state ownership mark "So. CAROLINA" on the top of the barrel. Due to their relative rarity and Confederate usage (especially if altered to percussion by means of a brazed bolster), the South Carolina contract arms should bring a considerable premium.

—	—	3500	1500	500

Whitney Armory U.S. M1816/M1822 Muskets, Flintlock or Altered to Percussion and Adapted with "Sea Fencible" Heavy Buttplates

A number of the Whitney U.S. M1816/M1822 muskets were delivered to the Commonwealth of Massachusetts under the terms of the 1808 Militia Act. Many of these were subsequently altered to percussion at the Watertown Arsenal near Boston for the state after 1850. At some time in their career both some of the flintlock arms and those that had been altered to percussion were adapted to a heavy brass buttplate with a peculiar knob at its heel. In the process the buttstock was usually narrowed to conform to the width of the new buttplate. Because many of the muskets encountered with this buttplate bore the inspection mark of Samuel Fuller ("SF/V" within a lozenge), these arms were initially considered to have been made for the Massachusetts "Sea Fencible" organizations formed during and after the War of 1812. That appellation, however, has been dismissed, although the exact purpose of the new buttplate and the date of its application are not known. These butt-plates are usually (but not necessarily) found on Whitney contract muskets and invariably are marked with the Massachusetts state ownership mark "MS" on the barrel as well as rack numbers on the tang of the buttplate itself. Despite the unknown purpose of these arms, they command a considerable premium over standard flintlock or altered to percussion Whitney muskets.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3500	1250	400

Whitney Armory U.S. M1816/M1822 Muskets, Altered to Percussion

From 1850 through 1856, many of the contract muskets in store at the U.S. arsenals were altered from flintlock to percussion by means of the "Belgian" or "cone-in barrel" method. The system of alteration involved the removal of the flintlock battery from the lock, filing in the screw holes from those parts, substituting a percussion hammer for the cock, plugging the vent, removing the breech plug so as to "upset" the upper, right-hand side top of the barrel, drilling and threading the "upset" section for a cone, reinserting the breech plug, and screwing in a new percussion cone. The percussioned musket was effective but the barrel was considerably weakened by the process, and while some were rifled during the American Civil War, most saw service in that conflict as smoothbores. As a general rule, the muskets so altered generally command about one-third the price of the arm in original flintlock. Exceptions are those with state ownership marks (eg. "OHIO" in the stock), with regimental marks, or with the so-called "Sea Fencible" buttplate.

Whitney Armory Muskets, 1825-1842

Eli Whitney died in 1825. Although he had a son destined to take over the family business, Eli Whitney, Jr. was only 5 years old when his father passed away and could not assume legal possession until he turned 21 in 1842. In the interim, the com-

pany was administered by the senior Whitney's trustees, Henry Edwards and James Goodrich, while the plant itself was run by Whitney's nephews, Philo and Eli Whitney Blake. During their control of the factory, three contracts were fulfilled for the U.S. government, one awarded in August of 1822 for 15,000 muskets (delivered between 1826 and 1830), a second awarded in March of 1830 for 8,750 muskets (delivered between 1831 and 1836) and a final contract in January of 1840 for 3,000 muskets (delivered between 1840 and 1842). An additional 6,750 were delivered under annual allotments granted by the War Department between 1835 and 1839 over and above the contracts for distribution to the states under the 1808 Militia Act. Although the 1840 contract had originally called for U.S. M1840 muskets, in April of that year, the contract was altered so that Whitney's plant could continue to deliver what it had delivered consistently from 1824, the U.S. M1816/1822 flintlock musket.

Eli Whitney, Jr. Armory Rifles and Rifle-Muskets, 1842-1865

Upon reaching the age of 21 in 1842, Eli Whitney, Jr. assumed command of his late father's gun making empire. Although he realized that the armory required updating to meet the improved tolerances adopted by the U.S. War Department, he also realized that a profit might be made in turning out arms of lesser standards for independent sale to the militia or the states. As a result, the younger Whitney's product line included not only several of the regulation U.S. longarms, but also a number of "good and serviceable" militia arms, including:

Whitney U.S. M1841 Contract Rifle (unaltered)

Between 1842 and 1855 Eli Whitney, Jr. received five contracts from the U.S. War Department to manufacture the newly adopted U.S. M1841 percussion rifle: 7,500 on October of 1842 (delivered between 1844 and 1847), 7,500 in March of 1848, subsequently extended to 10,000 in January of 1849 (delivered between 1849 and 1853) 5,000 (previously contracted for by Edward K. Tryon) in October of 1848 (delivered contiguous with the 1848 contract for 10,000), 5,000 in 1853 (delivered between 1853 and 1855), and 100 in 1855 (delivered that year). All except the final 1,100 delivered in 1855 conformed to the model made at Harpers Ferry, and of those 1,100, the only difference of 500 of them was the ramrod. This rifle was 49" in length, overall, having a 33" long browned barrel with .54 caliber rifled (7 groove) bore. The barrel bears the stamp of inspection at the breech, usually "U S /(inspectors' initials) / P," while the left flat (after mid-1848 for Whitney rifles) should also bear the stamping "STEEL" to indicate that the barrel had been rolled from "cast steel." Furniture is brass, the buttplate bearing the stamped letters, "U S." The lockplate is flat with a beveled edge and bears the horizontal two line inscription "E. WHITNEY" / "U S" forward of the hammer and the vertical, two line inscription "N. HAVEN" / (date) on the tail. (The date also appears on the breech plug tang). As originally made, the M1841 rifle was not adapted for a bayonet, though several modifications were made to the rifle between 1855 and 1862 to affect that adaptation.

Whitney U.S. M1841/1855 Contract Rifle, Adapted to Saber Bayonet and Long Range Sights

Before the final 600 rifles (of the 2,600 made in 1855) left the factory, the U.S. War Department contracted with Whitney to bring them up to the standards of the modified U.S. M1841 rifle then being produced or adapted at the Harpers Ferry Armory. The adaptation was two fold. First, a long range rear "ladder" style rear sight, having a 2-1/4" base was soldered to the top of the barrel; then a 1/2" long bayonet lug with 1" guide was brazed to the right side of the barrel, 2-1/2" from the muzzle. To permit disassembly, the old front band was removed and replaced with a shortened version. A new ramrod (also applied to 500 rifles without this adaptation), having an integral iron head cupped for the newly adopted "Minie ball" replaced the flat brass headed ramrod to complete the process; the rifle remained in .54 caliber with 7 grooves. Neither was the front sight modified. Bayonets were furnished by the Ames Manufacturing Company on a separate contract. Rifles so adapted at the Whitney Armory are among the rarer variants of the U.S. M1841 line and prices reflect that rarity.

Whitney U.S. M1841 Contract Rifles, Adapted to Saber Bayonets and Long Range Rear Sights (Colt 1862 Adaptation)

A large number of unaltered U.S. M1841 rifles remained on hand in U.S. Arsenals when the Civil War broke out, primarily those of Whitney's and Robbins & Lawrence's manufacture. To upgrade these rifles, revolver maker, Samuel Colt arranged to purchase 10,500 and adapt them to bayonets and long-range sights. The sight that he affixed consisted of the two leaf rear sight he had been using on his revolving rifles, with one leaf flopping forward and one flopping backward from the 100 yard block. The saber bayonet lug he attached consisted of a blued clamping ring with integral 1/2"-long lug attached that could fastened to the barrel so that the lug projected from the right side. These lugs were numbered both to the bayonet and the rifle's barrel, the number appearing on the lower surface of the barrel just behind the location of the clamping ring. Colt also bored the rifles up to .58 caliber, leaving some with 7 grooves but rerifling others with 3 wide grooves. An estimated half of the 10,200 rifles so modified by Colt were of Whitney's earlier production. Due to the Colt association, rifles so modified usually command slightly higher prices than other Civil War adaptations for saber or socket bayonets.

Whitney South Carolina Contract M1841 Rifle

To meet the perceived needs of South Carolina during the anti-slavery debates following the Mexican War Annexation, Whitney produced a variant of the U.S. M1841 rifle for that state, delivering only 274 in 1849. The marking of this rifle differed only in having the letters "S C" on the plate beneath the "E. WHITNEY" stamp. Because South Carolina had previously contracted for 1,000 variant M1841 rifles from William Glaze & Co. in 1853 which accepted a socket bayonet, Whitney provided the 274 1849 dated rifles with that provision also, although the lug was located under the barrel instead of atop it. Because the socket bayonet dominated the forward 3" of the barrel, the front sight was relocated to the top of the upper strap of the front band. Rifles from this contract are exceedingly rare.

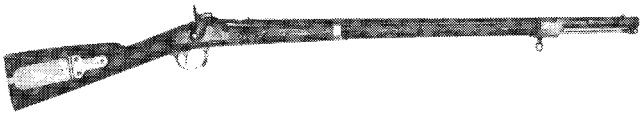
Whitney "Good & Serviceable" M1841 Derivatives

From parts or entire rifles rejected for his federal contracts for U.S. M1841 rifles, between 1848 and 1860, Eli Whitney, Jr. assembled a number of rifles similar in overall characteristics to the federal contract rifles but differing both in quality and in a number of minor details. At least four variants were produced between 1855 and 1862 and sold to various states or independent militia companies. Distinguishing characteristics of these four are:

Type I. M1841 rifle adapted to saber bayonet but not to long range sights.

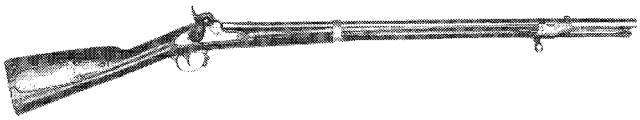


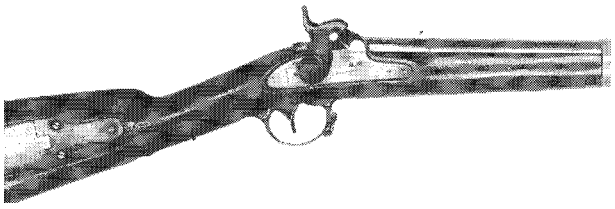
A 1/2"-long saber bayonet lug (either with or without the 1" guide) brazed to the right side of the barrel; long front band replaced with short double strapped band left over from 1855 contract. Some of this type (without 1" guide) are known with "OHIO" state ownership marks and are thought to be from among the 420 purchased by the state in 1861 from Schuyler, Hartley & Graham. Examples are known with the lockplate dated 1855 and without any date or "US" stamp below "E. WHITNEY."

Type II. M1841 rifle adapted to saber bayonet and Sharps long range sight.

These rifles also bear the 1/2" brazed saber bayonet lug (with the 1" guide) and the short front band, but they also have a Sharps M1853 "ladder" rear sight added in lieu of the standard notched iron block. Moreover, rifles in this configuration lack the brass patchbox lid and its underlying cavity for implements and greased patches.

Type III. M1841 rifle adapted to socket bayonet and Sharps long-range sight.





These late-production (1859-1860) derivatives of the M1841 rifle are adapted to the Sharps long-range sight used on the Type II. rifles but have a patch box. Unlike standard production, however, it is covered with an iron lid and hingle. The trigger guard strap is also iron. Lock plates delete both the date from the tail and the "US" under "E. WHITNEY." An iron stud is added below the barrel near the muzzle for a socket bayonet, necessitating the relocation of the brass blade front sight to the upper strap of the forward band. Probably fewer than 100 of this configuration were made, making it the most desirable of the derivative M1841 rifles.

Type IV. M1841 rifle unadapted using modified parts.

Rifles of this configuration use the same markings as the type III rifles but delete entirely the patch box and its lid (like the type II rifles). The trigger guard strap is iron and the lock screws seem to be the same as Whitney used for his Whitney short Enfield derivative rifles. It is suspected that these rifles were purchased from New York dealers and sold to Georgia during the secession crisis of 1860-1861, thereby enhancing their collector's value, though in general Whitney M1841 derivative rifles are equal in pricing:

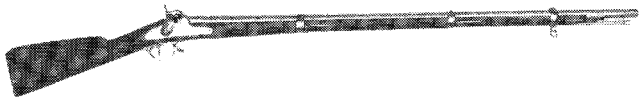
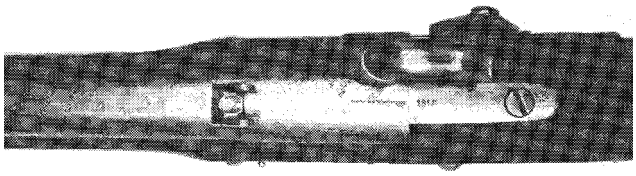
—	—	3250	1250	500

Whitney M1842 Rifled Musket Derivative



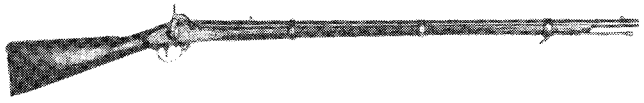


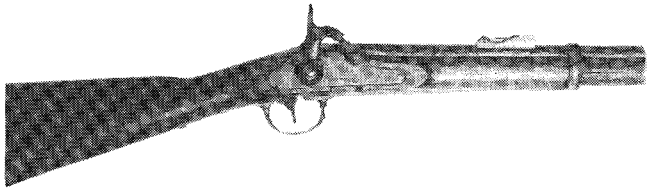
Using rejected U.S. M1842 barrels sold at auction by the Springfield Armory, Whitney assembled approximately 2,000 .69 caliber rifled muskets that he exchanged with the state of New Hampshire in 1858 for a number of old flintlock muskets owned by that state. These rifled muskets exhibit a number of anomalies from the U.S. M1842 musket, although overall length (57-3/4") and the barrel length (42") remain the same as that musket, the bores are rifles with 7 narrow grooves, and in addition to the dates and inspection marks placed at Springfield usually bear the state ownership mark "NEW HAMPSHIRE" on the top of the barrel. In finishing these rifled muskets, Whitney utilized a number of parts from other gun makers, including Sharps M1853 "ladder" style carbine rear sights, bands from the Robbins & Lawrence P1853 Enfield rifle-musket contract, and internal lock parts remaining from his M1841 rifles. Parts that are unique to these arms include the iron nosecap and the flat lockplate. The lockplates are unmarked, but the barrels usually show a letter/number code common to Whitney's production during this period. Despite a production of approximately 2,000 muskets, the survival rate for this type of arm is quite low.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1250	400

Whitney P1853 "Long Enfield" Rifle-Musket Derivative

Having secured a number of bands and other furniture from the Robbins & Lawrence contract for P1853 Enfield rifle-muskets, about 1859 Whitney developed a derivative of that arm that combined those bands with a 40"-barrel .58 caliber, rifled with 7 grooves that basically resembled the configuration of the U.S. M1855 rifle-musket, a copy of which Whitney was also making. The 56"-long rifle-musket that resulted was sold to state militia companies and two states, Maryland purchasing 2,000 and Georgia contracting for 1,700 (of which 1,225 were delivered). Although several of the components of the furniture were from the Robbins & Lawrence contract, the nosecap was pewter (Enfield style), and the iron buttplate and brass trigger guard bow/iron strap were of a style peculiar to Whitney' Enfield series. The rear sight resembled the ladder pattern of the U.S. M1855 rifle musket. The unique flat, unbeveled lockplate simply bears the one line stamp, "E. WHITNEY" forward of the hammer.





Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1250	600

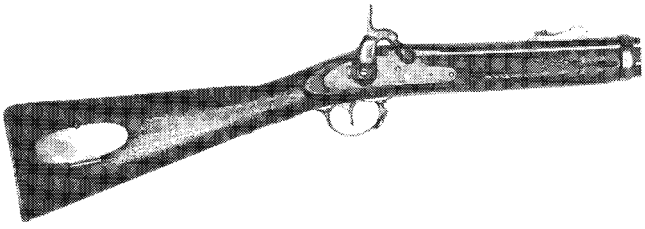
This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Whitney P1853 "Short Enfield" Rifle Derivative

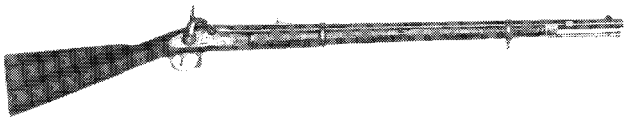
At the same time that Whitney developed his "Long Enfield" Derivative Rifle-Musket, he also prepared a short version of it similar to the British P1856 sergeant's rifle. Having an overall length of 49", the rifle version had a 33"-long barrel in .58 caliber and rifled with 7 grooves like the rifle-musket. The furniture was basically the same as the rifle-musket as well, with a pewter nosecap, iron buttplate, and combination brass bow and iron strap trigger guard (although some variants are known with all brass P1853 trigger guards). The two iron bands were from the Robbins & Lawrence contract salvage, as were the brass lock screw washers. The flat, unbeveled lockplate is the same style as used in the Long Enfield derivative rifle-muskets and is similarly marked "E. WHITNEY" forward of the hammer. In the manufacture of the rifle, four variants evolved.

Type I. Buttstock incorporated an oval iron patch box; front and rear sights were of standard U.S. M1841 configuration and no provision was made for a saber bayonet.

Type II. Buttstock continued to incorporate an oval iron patch box; rear sight was now the long range "ladder" type on a 2-5/16" base as used on the long Enfield rifle-musket derivative. Front sight was an iron block with integral blade. A 1/2" long saber bayonet lug was added to the right side of the barrel.



Type III. The oval iron patchbox was deleted from the buttstock. Front and rear sights remain as in Type II, as does bayonet lug.



Type IV. Identical to Type III but with a new single leaf rear sight on a 1-1/4" long base.

Total production of these rifles is estimated to have been between 800 and 1,000, with approximately half of the number going to southern states. Prices should not vary between the four types; however, confirmed Confederate usage will increase the value significantly.

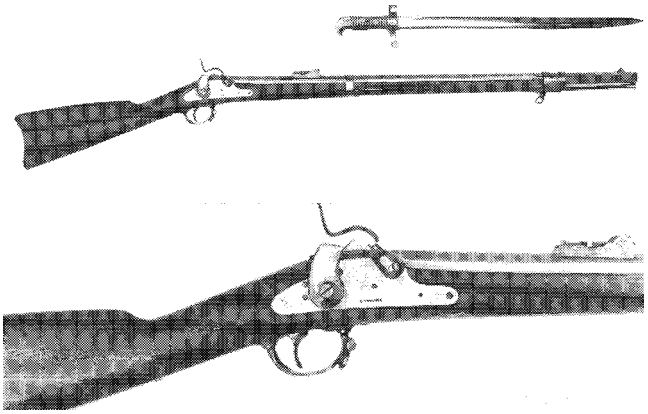
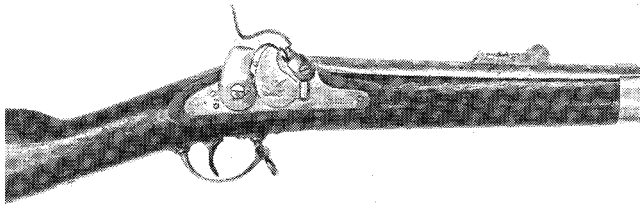
Whitney M1855 Rifle Derivative



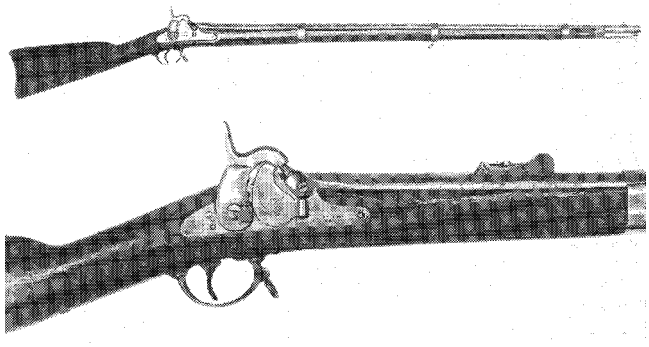
At the same time that Whitney advertised his Enfield derivative series of rifle-muskets and rifles, he also indicated the availability of a short rifle with saber bayonet. This rifle combined rejected barrels made at Harpers Ferry in 1858 for the U.S. M1855 rifles with rejected, unmilled Maynard tape primer lockplates that had been shaved of their top "hump," marked forward of the hammer with the single line stamp, "E. WHITNEY." The buttplate and the trigger guard also conform to that of the U.S. M1855 rifle, but the bands are brass, remaining from Whitney's M1841/1855 rifle contract. Early in production these rifles used round brass lock screw washers following the M1855 pattern; later production used the winged brass lock screw washers that Whitney inherited from the Robbins & Lawrence P1853 rifle-musket contract and which he used on his Enfield series derivatives. At least two patterns of saber bayonet were used on this rifle.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3500	1250	500

Whitney M1855 Rifle-Musket Derivative

In 1861, Whitney accepted a U.S. contract to produce 40,000 U.S. "M1855" rifle-muskets. What Whitney had in mind under this contract and what the War Department demanded were two different arms. Whitney's product was similar to the U.S. M1855 rifle-musket but differed in a number of respects. The 40" barrel was .58 caliber but was rifled with 7 rather than 3 grooves and was adapted to the English P1853 socket bayonet he had been using on his Enfield derivative rifle-muskets. The initial rear sight, while similar to the U.S. M1855 type, was slightly shorter, having a 2-5/16" base. (On later production, Whitney substituted a shorter, 1-1/4"-long base with a single, pierced leaf sight.) The nosecap, moreover, was made of pewter and followed the Enfield pattern rather than being malleable iron of the U.S. M1855 pattern. On later production, Whitney also substituted brass winged lock screw washers from his Enfield derivative series. The lockplates for these arms were drawn from complete Maynard locks made at the federal armories in 1858 and 1859 but later rejected for flaws. Upon these plates Whitney stamped "E. WHITNEY / N. HAVEN," as on his early Connecticut contract M1861 derivative rifle-muskets. Except for the letter/number code, the barrels are unmarked. Examples are known whose stocks bear indications of issue to the 8th Connecticut Infantry during the Civil War, suggesting Whitney may have sold the few made to Connecticut under his first state contract. Arms with these regimental marks should command a premium over unmarked arms.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3500	1250	500

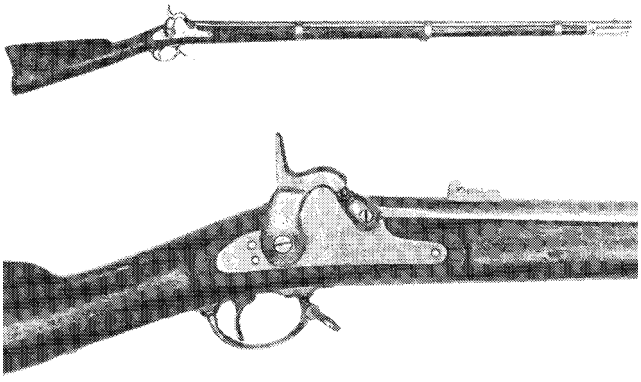
Whitney M1861 Connecticut Contract Rifle-Musket Derivative

In 1861 and 1862, Eli Whitney, Jr. entered into two contracts with his home state of Connecticut for respectively 6,000 and 8,000 rifle-muskets generally conforming to the U.S. M1861 rifle musket. A number of exceptions to the U.S. model, however, were permitted. On the first contract, the 40" barrels were in .58 caliber but were made with 7 groove rifling instead of 3 groove; on the second contract, the arms were made with 3-groove rifling. Nosecaps for both contracts were of the U.S. M1855/1861 pattern but were cast in pewter instead of malleable iron. An exception was also permitted in the rear sights, which initially were the same 1-1/4" long base with pierced single leaf that Whitney had used on his Type IV short Enfield derivative rifles, though later the base was changed to conform to the pattern adopted for the U.S. M1861 rifle-musket but still retaining the single leaf. Lockplates were M1861-style, marked forward of the hammer "E. WHITNEY / N. HAVEN" on early production and with an eagle surmounting a panoply of flags and trophies over "WHITNEYVILLE" on later production. The barrels bore the typical Whitney letter/number code and were adapted to the Enfield pattern socket bayonets rather than the U.S. M1855 socket bayonets. Later production occasionally bears the inspection letters "G.W.Q."

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2750	1150	400

Whitney "High Humpback" Lockplate M1861 Rifle-Musket Derivative

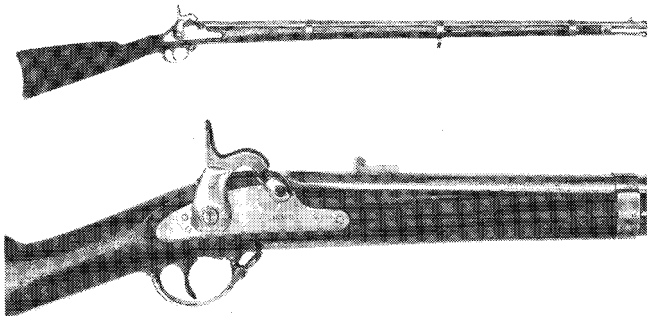
With the completion of his Connecticut contracts, Whitney combined the excess parts from its production with some of the unmilled and unshaved lockplates that he still had on hand from his M1855 Rifle Derivatives. The 56"-long rifle-muskets that resulted have 40" barrels in .58 caliber with 3-groove rifling and a rear sight that conforms to the U.S. M1861 pattern that Whitney began making in 1863. The flat, beveled unmilled lockplates bear the two line stamp "E. WHITNEY / N. HAVEN" that Whitney had used on his M1855 rifle-musket derivative and on the early M1861 Connecticut contract rifle-muskets, but showing considerable wear, to the extent that the second line is often incomplete or missing entirely. Photograph evidence indicates that the 21st Connecticut Infantry received some of these rifle-muskets. They are often mistaken as a southern purchase, which artificially raises the asking prices.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1250	500

Whitney "Manton" M1861 Rifle-Musket Derivative

In order to dispose of some of his inferior arms from the second Connecticut state contract, Whitney assembled at least 1,300 bearing a fictitious Old English lock stamp "Manton" forward of the hammer and the date "1862" on its tail. In most respects this arm resembled the U.S. M1861 rifle musket, complete with 3-groove rifling in its .58-caliber, 40" barrel with typical Whitney letter/number code near the muzzle (and often also marked "G.W.Q. on its left flat). Nosecaps, in typical Whitney style, were case from pewter instead of being formed from malleable iron. The rear sight closely follows the M1861 pattern but lacks the step on its side walls since it utilized a simple pierced leaf instead of the compound double leaf of the M1861 rifle-musket. These arms were disposed of in the New York City market after the 1863 Draft Riot and issued to the New York National Guard.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4250	2000	600

Whitney "Direct Vent" M1861 Rifle-Musket Derivatives

In his continued efforts to dispose of surplus and rejected parts from his Connecticut and federal contracts, Whitney devised in 1863 a rifle-musket generally conforming to the M1861 rifle-musket except in two notable features. The bolster, instead of projecting considerably away from the barrel and having a clean-out screw was relatively short and flat faced. The process of making this bolster eliminated one production sequence, since it was not possible to drill the hole for the cone directly to the barrel. To accommodate the new cone position, the lockplates were made flat, without the bevel, and inletted flush with the stock. Lockplates bear the eagle surmounting the panoply of flags and trophies over "WHITNEYVILLE" stamp forward of the hammer, and are known with "1863" on the tail or without any date. The rear sight is the same as used on the "Manton" rifle-musket derivative. Arms with barrels than 40", 39", and 30" exist, all in .58 caliber with 3-groove rifling; however, the shortest of these may be post-war modifications for cadet use. Quantities made are not known, but surviving examples suggest limited production, probably to use faulty parts from the 1863 federal contract.

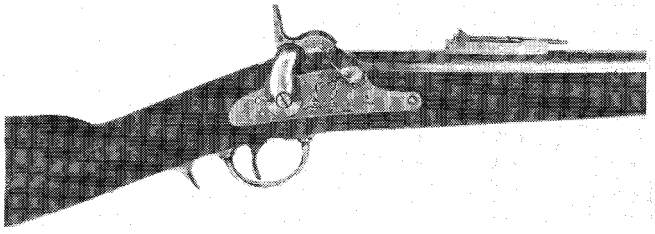
Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1250	400

Whitney U.S. M1861 Contract Rifle-Musket

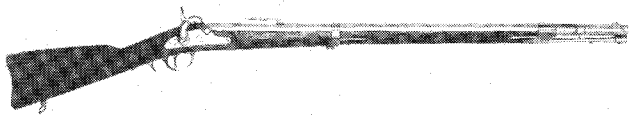
In October of 1863, Whitney secured a contract with the U.S. War Department to produce 15,000 U.S. M1861 rifle-muskets. The arms manufactured under this contract conform in all respects to the Springfield Model adopted in 1861. The 40" barrel is in .58 caliber and rifled with 3 grooves; its rear sight conforms to the two-leaf model with stepped side walls. Nosecap is M1861 style and made of malleable iron. Socket bayonets furnished with them conform to the U.S. M1855/M1861 pattern. Marks include "US" on buttplate and standard inspection marks on barrel and stock. Lockplate marked with eagle surmounting letters "US" forward of the hammer and "WHITNEYVILLE" on the forward projection of the plate; date, "1863" or "1864" stamped on tail of the plate.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1250	400

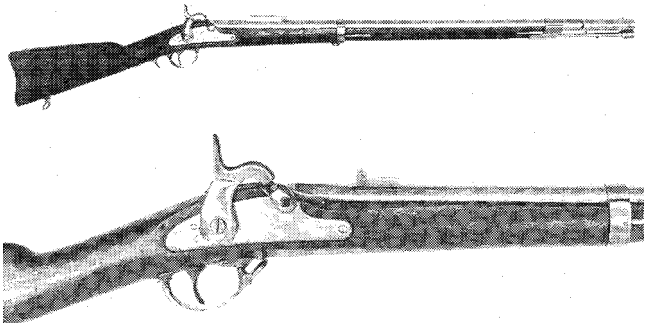
Whitney U.S. Navy Contract Rifle



This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.



In July of 1861, Whitney entered a contact with the U.S. Navy to produce 10,000 rifles of the "Plymouth Pattern." So called after the U.S. Navy warship whereupon the first Harpers Ferry trial rifles had been developed, the new Navy rifle borrowed many of its characteristics from the French M1846 "carbine a tige." Overall length was 50" with a 34"-long barrel bearing a saber bayonet lug with guide extending nearly to the muzzle on its right side. The bore was .69 caliber, rifled with three broad lands and grooves. The rear sight copied the French M1846 and M1859 styles, i.e. it has an elevating ladder but no sidewalls. On early production the sights are serially numbered to the rifle's serial number (appearing on the breech plug tang). Barrels bear the standard U.S. inspection marks on the left quarter flat and the production date ("1863" or "1864") on the top of the barrel near the breech. Two lock markings have been encountered. The earlier production uses flat beveled plate marked with the date "1863" on its tail and an eagle surmounting a panoply of flags and trophies over the name "WHITNEYVILLE." In later (after serial no. 3,000) the lock's tail is marked "1864" and the stamping forward of the hammer matches that on the U.S. M1861 Whitney contract rifle-muskets, i.e. a small eagle over "U S" and "WHITNEYVILLE" in the forward projection of the plate. Inspector's initials (F.C.W.) appear on the barrel and in a cartouche on the stock.



Exc.	V.G.	Good	Fair	Poor

The Whitney Arms Company, 1865-1888

With the close of the American Civil War, Eli Whitney, Jr. again turned his eyes to the manufacture of inexpensive arms from parts remaining on hand from his Civil War contracts. Extra barrels were turned into inexpensive muzzleloading shotguns, and a few breechloading designs were toyed with. Following Remington's example, Whitney soon realized that a substantial profit could be made in the production of single-shot martial arms for foreign governments. The result was a series of breechloading arms that copied many salient features of the Remington line, including a direct copy after the expiration of the Remington patent for the "rolling block" mechanism. Not until the late 1870s did Whitney acquire the rights to several patents that led to the production of a lever-action repeating rifle. During the post-war period, revolver production, which had begun with evasions of Colt's patents in the decade prior to the Civil War, mushroomed with the production of small spur-trigger rimfire cartridge revolvers. Despite the variety of arms produced, by 1883 Whitney was considering the sale of his company. Business reverses over the next five years necessitated the sale of the firm to Winchester in 1888. Primarily interested securing in the patent rights for Whitney's lever-action series of rifles, Winchester closed the plant and moved its machinery to New Haven. After 90 years of production, the Whitneyville Armory ceased to exist.

Single Barreled Percussion Shotgun

This firearm was manufactured by Whitney out of surplus .58 caliber rifle barrels that were opened up and converted to smoothbore .60-caliber shotgun barrels. They are offered in lengths of 28" to 36" and are marked "Whitney Arms Co., Whitneyville, Conn. Homogeneous Wrought Steel." The finish is blued, with varnished walnut stocks that are crudely checkered. There were approximately 2,000 manufactured between 1866 and 1869. These guns are rarely encountered on today's market.

Exc.	V.G.	Good	Fair	Poor
—	—	950	400	150

Double-Barreled Percussion Shotgun

The specifications for this version are similar to that of the single barrel except that there are two side-by-side barrels with double locks and hammers and double triggers. They are slightly more common than the single barreled version.

Whitney Phoenix

There is little known about the origin of this model. It is built on a patent issued to Whitney in 1874. There are a number of variations that are all marked "Phoenix, Patent May 24, 74." The Whitney name is not marked on any of the versions. They are all single-shot breechloaders with a breechblock that lifts to the right side and upward for loading. The barrels are all blued, with either case colored or blued receivers and walnut stocks. There were approximately 25,000 total manufactured between 1867 and 1881. The models and values are listed.

Whitney-Laidley Model I Rolling Block

Whitney acquired manufacturing rights for this model from the inventors T. Laidley and C.A. Emery, who had received the patent in 1866. Whitney immediately started to modify the action to become competitive with the Remington Rolling Block. There were approximately 50,000 manufactured total between 1871 and 1881. There are a number of variations of this model.

Military Carbine

There were approximately 5,000 manufactured chambered for the .433, .45, or .50 centerfire cartridges. It has a 20.5" round barrel with military-type sights and a saddle ring on the receiver. The finish is blued, with a case colored frame and a walnut stock. Most of them were shipped to Central or South America.

—	—	4250	1750	500

Whitney-Remington Model 2 Rolling Block

When Remington's patent for the Rolling Block action expired, Whitney was quick to reproduce the action, labeling it his "New Improved System." It is essentially quite similar to Remington's Rolling Block and is easily recognized when compared with the Model 1 because it has only two parts — the hammer and the breechblock. The frame is also rounded. The tang on this model is marked "Whitney Arms Company, New Haven Ct USA." There were approximately 50,000 total manufactured between 1881 and 1888. There are a number of variations are listed.

Shotgun

This is a smoothbore version chambered for 12, 14, 16, or 20 gauge. It is offered with barrel lengths between 26" and 30". Twenty inch barrels have also been noted.

Exc.	V.G.	Good	Fair	Poor
—	—	650	250	100

Military Carbine

This version is chambered for the .433 and .45 centerfire cartridges. It has a 20.5" barrel and is blued, with a case colored receiver and walnut stock. There were approximately 5,000 manufactured. Most were sent to South or Central America.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	700	300

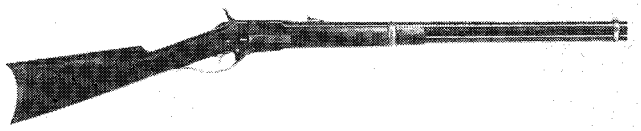
Civilian Carbine

This version is chambered for the .44 rimfire or centerfire cartridge with an 18.5" round barrel. The finish is similar to the Military Carbine. There were approximately 2,000 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1600	600	250

Military Rifle

This version is chambered for the .433, .45, or .50 centerfire cartridge. It has a 32.5" or 35" barrel. It is finished similarly to the Military Carbine. There were approximately 39,000 manufactured.



Courtesy Buffalo Bill Historical Center, Cody, Wyoming

Exc.	V.G.	Good	Fair	Poor
—	—	2000	750	300

No. 1 Sporting Rifle

This version is chambered for various popular sporting cartridges and is offered with barrel lengths from 26" to 30", either round or octagonal in configuration. The finish is blued, with a case colored receiver and a varnished walnut stock. There were many options available that could radically affect the value, and a qualified appraisal would be advisable. There were approximately 3,000 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	2500	1000	400

No. 2 Sporting Rifle

This is a smaller version of the No. 1 Rifle, chambered for the .22 rimfire, .32, .38, and .44-40 centerfire cartridges. Again, a qualified appraisal would be helpful, as many options can affect the value.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	700	250

Whitney-Burgess-Morse Rifle

This is a lever action repeating rifle chambered for the .45-70 Government cartridge. There are three variations. All have a magazine tube mounted beneath the barrel with blued finishes and walnut stocks. The barrels are marked "G. W. Morse Patented Oct. 28th 1856." The tang is marked "A. Burgess Patented Jan. 7th, 1873, Patented Oct 19th 1873." There were approximately 3,000 total manufactured between 1878 and 1882. The variations are listed.

Sporting Rifle

This version has a 28" octagonal or round barrel. The magazine tube holds 9 rounds. There are a number of options available that can increase the value drastically; and we recommend competent, individual appraisal. Value given is for a standard model.

Exc.	V.G.	Good	Fair	Poor
—	—	3250	1250	400

Military Rifle

This version has a 33" round barrel with a full-length forearm held on by two barrel bands. It features military sights and has an 11-round tubular magazine. It has a bayonet lug and sling swivels. This variation is also found chambered for the .43 Spanish and .42 Russian cartridges. There were approximately 1,000 manufactured.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4250	2000	700

Carbine

This version has a 22" round barrel with a full-length forearm held on by one barrel band. It has a 7-round tubular magazine and a saddle ring attached to the frame. There were approximately 500 manufactured.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4750	2250	750

Whitney-Kennedy Rifle

This is a lever action repeating rifle that was manufactured in two sizes. It has a magazine tube mounted under the barrel and a blued finish with a case colored lever. The stock is walnut. The barrel is marked "Whitney Arms Co New Haven, Conn. U.S.A." Occasionally, the word "Kennedy" is marked after the Whitney name. There are two major variations. One features a standard-type action lever; and the other, the same "S"-shaped lever that is found on the Burgess model. This version would be worth approximately 10 percent additional. As with many of the rifles of this era, there were many options available that will affect the values. We strongly recommend securing a qualified appraisal for all but the standard models if a transaction is contemplated. There were approximately 15,000 manufactured between 1879 and 1886. The variations of the Whitney-Kennedy and their values are listed.

Courtesy Buffalo Bill Historical Center, Cody, Wyoming

Small Frame Sporting Rifle

This version is chambered for the .32-20, .38-40, and the .40-40 cartridges. It has a 24" barrel that is either round or octagonal in configuration. Examples will be noted with either a full-length or half-length tubular magazine.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2750	1200	500

Large Frame Sporting Rifle

This version is chambered for the .40-60, .45-60, .45-75, and the .50-90 cartridges. The .50-caliber version is uncommon and will bring a 20 percent premium. The barrel lengths offered are 26" or 28".

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3000	1350	500

Military Rifle

This is a large-frame model, chambered for the .40-.60, .44-.40, and the .45-60 cartridges. It has a 32.25" round barrel and either an 11- or 16-round tubular magazine. It has a full-length walnut forend held on by two barrel bands and features a bayonet lug and sling swivels. There were approximately 1,000 manufactured. Most were shipped to Central or South America.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3750	1750	550

Military Carbine

This is built on either the small-frame or large-frame action and is chambered for the .38-40, .44-40, .40-60, or .45-60 cartridges. It has either a 20" or 22" round barrel and a 9- or 12-round tubular magazine, depending on the caliber. It has a short forend held on by a single barrel band. There were approximately 1,000 manufactured. Most were sent to Central or South America.

—	—	3750	1750	550

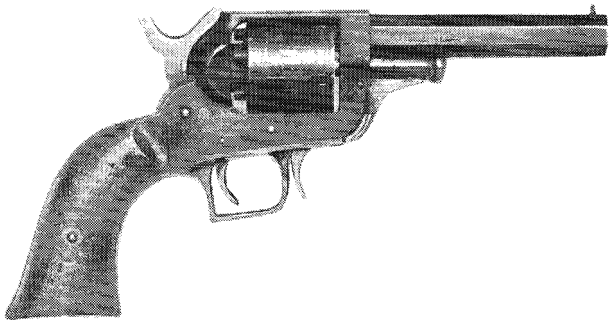
Hooded Cylinder Pocket Revolver

This is an unusual revolver that is chambered for .28 caliber percussion. It has a manually rotated, 6-shot hooded cylinder that has etched decorations. The octagonal barrel is offered in lengths of 3" to 6". There is a button at the back of the frame that unlocks the cylinder so that it can be rotated. The finish is blued, with a brass frame and two-piece rounded walnut grips. It is marked "E. Whitney N. Haven Ct." There were approximately 200 manufactured between 1850 and 1853.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3250	1500	600

Two Trigger Pocket Revolver

This is a conventional-appearing pocket revolver with a manually rotated cylinder. There is a second trigger located in front of the conventional trigger guard that releases the cylinder so that it can be turned. It is chambered for .32 caliber percussion and has an octagonal barrel from 3" to 6" in length. It has a 5-shot unfluted cylinder that is etched and a brass frame. The remainder is blued, with squared walnut two-piece grips. An iron-frame version is also available, but only 50 were produced. It would bring approximately 60 percent additional. There were approximately 650 total manufactured between 1852 and 1854.

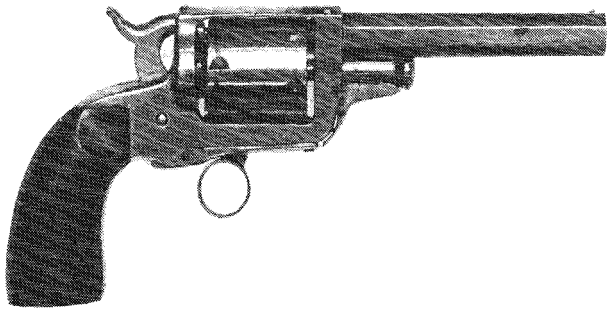


Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2000	850	300

Whitney-Beals Patent Revolver

This was an unusual, ring-trigger pocket pistol that was made in three basic variations.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

First Model

This version is chambered for .31-caliber percussion and has barrels of octagonal configuration from 2" to 6" in length. It has a brass frame and a 6-shot cylinder. It is marked "F. Beals/New Haven, Ct." There were only 50 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	3500	1500	450

.31 Caliber Model

This version has an iron frame and a 7-shot cylinder. The octagonal barrels are from 2" to 6" in length. It is marked "Address E. Whitney/Whitneyville, Ct." There were approximately 2,300 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1500	600	200

.28 Caliber Model

Except for the caliber, this model is similar to the .31 Caliber Model. There were approximately 850 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	700	300

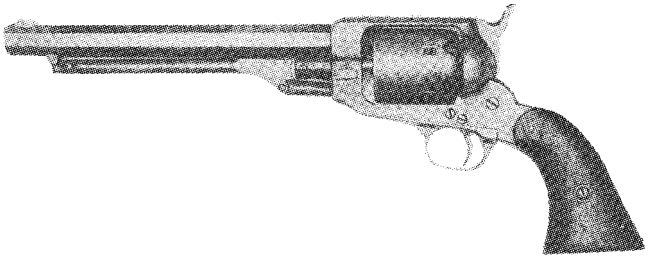
Whitney 1851 Navy

This is a faithful copy of the 1851 Colt Revolver. It is virtually identical. There is a possibility that surplus Colt parts were utilized in the construction of this revolver. There were approximately 400 manufactured in 1857 and 1858.

Exc.	V.G.	Good	Fair	Poor
—	—	4250	1750	650

Whitney Navy Revolver

This is a single-action revolver chambered for .36 caliber percussion. It has a standard octagonal barrel length of 7.5". It has an iron frame and a 6-shot unfluted cylinder that is roll engraved. The finish is blued, with a case colored loading lever and two-piece walnut grips. The barrel is marked either "E. Whitney/N. Haven" or "Eagle Co." There are a number of minor variations on this revolver, and we strongly urge competent appraisal if contemplating a transaction. There were 33,000 total manufactured between 1858 and 1862.



Courtesy Wallis & Wallis, Lewes, Sussex, England

First Model

Nearly the entire production of the First Model is marked "Eagle Co." The reason for this marking is unknown. There are four distinct variations of this model.

First Variation

This model has no integral loading-lever assembly and has a thin top strap. There were only 100 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	3750	1500	550

Second Variation

This version is similar to the First Variation, with an integral loading lever. There were approximately 200 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	3000	1200	400

Third Variation

This is similar to the Second, with a three-screw frame instead of four screws. The loading lever is also modified. There were approximately 500 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	2500	1000	300

Fourth Variation

This version has a rounded frame and a safety notch between the nipples on the rear of the cylinder. There have been examples noted marked "E. Whitney/N. Haven." There were approximately 700 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	2500	1000	300

Second Model

First Variation

This version features a more robust frame with a brass trigger guard. The barrel is marked "E. Whitney/N. Haven." The cylinder pin is secured by a wing nut, and there is an integral loading lever. There were approximately 1,200 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	2000	900	300

Second Variation

This version has six improved safety notches on the rear of the cylinder. There were approximately 10,000 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	750	250

Third Variation

This version has an improved, Colt-type loading-lever latch. There were approximately 2,000 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	750	250

Fourth Variation

This is similar to the Third except the cylinder is marked "Whitneyville." There were approximately 10,000 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	750	250

Fifth Variation

This version has a larger trigger guard. There were approximately 4,000 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	750	250

Sixth Variation

This version has the larger trigger guard and five-groove rifling instead of the usual seven-groove. There were approximately 2,500 manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	750	250

Whitney Pocket Revolver

This is a single-action revolver chambered for .31 caliber percussion. It has octagonal barrels between 3" and 6" in length. It has a 5-shot unfluted cylinder that is roll engraved and marked "Whitneyville." The frame is iron with a blued finish and a case colored integral loading lever. The grips are two-piece walnut. The development of this model, as far as models and variations go, is identical to that which we described in the Navy Model designation. The values are different, and we list them for reference. Again, we recommend securing qualified appraisal if a transaction is contemplated. There were approximately 32,500 manufactured from 1858 to 1862.

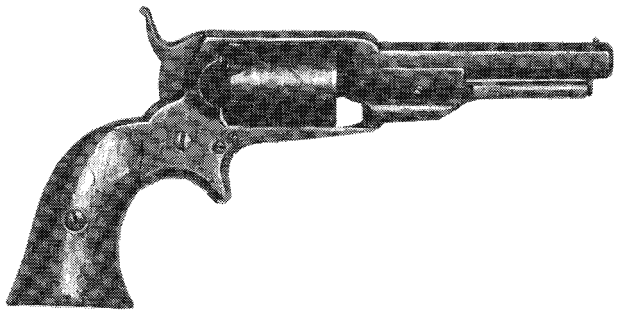
New Model Pocket Revolver

This is a single-action, spur-triggered pocket revolver chambered for .28-caliber percussion. It has a 3.5" octagonal barrel and a 6-shot roll engraved cylinder. It features an iron frame with a blued finish and two-piece walnut grips. The barrel is marked "E. Whitney/N. Haven." There were approximately 2,000 manufactured between 1860 and 1867.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1250	500	200

Rimfire Pocket Revolver

This is a spur-trigger, single-action, solid-frame pocket revolver that was produced in three frame sizes, depending on the caliber. It is chambered for the .22, .32, and .38 rimfire cartridges. The frame is brass, and it is found in a variety of finishes-nickel-plated or blued, or a combination thereof. The bird's-head grips are rosewood or hard rubber; ivory or pearl grips are sometimes encountered and will bring a slight premium in value. The barrels are octagonal and from 1.5" to 5" in length. The barrels are marked "Whitneyville Armory Ct. USA." They have also been noted with the trade names "Monitor," "Defender," or "Eagle." They were commonly referred to as the Model No. 1, No. 1.5, Model 2, or Model 2.5. The values for all are quite similar. There were approximately 30,000 manufactured of all types between 1871 and 1879.

WHITNEY FIREARMS COMPANY

Hartford, Connecticut

Wolverine

A .22 caliber semi-automatic pistol with a 4.75" barrel. Blued or nickel-plated with plastic grips and an aluminum alloy frame. This pistol is readily distinguishable by its streamlined form. Approximately 13,000 examples were made with the blue finish and 900 with a nickel-plated finish. Some slides are marked "Wolverine Whitney Firearms Inc., New Haven, Conn USA." Others are marked "Whitney" only. The Wolverine-marked pistols are considered more rare. Pistol were produced in two lo-

cations: New Haven, Connecticut and Hartford, Connecticut. Manufactured from 1955 to 1962. Now being reproduced by Olympic Arms. Pricing is for original version.

Blue Finish

Blued pistols most often have brown or black grips.

WILDEY FIREARMS CO., INC.

Cheshire, Connecticut
Newburg, New York
Warren, Connecticut

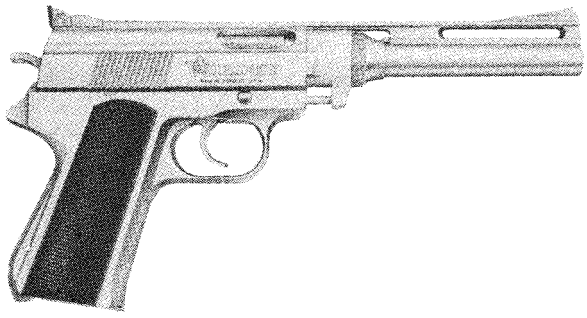
Wildey Auto Pistol

A gas-operated, rotary-bolt, double-action semi-automatic pistol chambered for the .357 Peterbuilt, the .45 Winchester Magnum, or the .475 Wildey Magnum cartridges. with 5", 6", 7", 8", or 10" ventilated rib barrels. The gas-operated action is adjustable and features a single-shot cutoff. The rotary bolt has three heavy locking lugs. Constructed of stainless steel with adjustable sights and wood grips. The values of this rarely encountered pistol are based on not only the condition, but the caliber—as well the serial-number range, with earlier-numbered guns being worth a good deal more than the later or current production models.

Cheshire, Conn., Address

Produced in .45 Winchester Magnum only and is serial numbered from No. 1 through 2489.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.



Serial No. 1 through 200

NIB	Exc.	V.G.	Good	Fair	Poor
2000	1500	1200	—	—	—

NOTE: Serial numbers above 200 would be worth approximately $200 less respectively in each category of condition.

WILSON & CO.

SEE—English Military Firearms

WILSON, J. P.

Ilion, New York

Percussion Alarm Gun

This unusual little device is chambered for .22 caliber percussion. It consists of approximately a 1" rectangular brass block with a chamber bored into it that accepts a blackpowder charge. There is no provision for a projectile. There is a spring retained arm on top, which works as a hammer. As the device is activated by a door or a window, the hammer snaps closed, striking a percussion cap that causes the charge to fire, thereby creating an alarm notifying that the perimeter has been breached. It is marked "J. P. Wilson/Patented Feb. 8, 1859/Ilion, NY."

KZ 9mm

Polymer-frame 1911 chambered for 9mm. Full size is 16+1 capacity with 5" barrel at 33 oz. Compact size is 14+1 capacity with 4.1" barrel at 31 oz. LOA Introduced 2006. MSRP: $1510 full size/1550 compact.

ADP 9mm

Wilson's first production pistol. 11-round capacity, polymer frame. 19.5 oz. 6.3" overall length, 3.75" barrel. Introduced 2006. MSRP: $579.

SEMI-CUSTOM PISTOLS

These pistols were first built in 1996 using Springfield Armory pistols as the base gun. The Protector Compact was built on the Springfield Compact pistol. In 1997 all Service Grade pistols are built on the new Wilson Combat slide and frame with the exception of the Protector compact which is built on a Colt commander slide and a Colt Officer Model frame. The semi-custom pistols are all marked with 1996A2 on the left-hand side of the slide. Service Grade pistols bear the name Protector, Protector Compact, or Classic on the rights side of the frame's dust cover.

Wilson Model 1996A2

This pistol, introduced in 1996, is offered in a number of different configurations. These configurations affect price. The base pistol is chambered for the .45 ACP cartridge, has snag-free sights and blue finish. Barrel length is 5", magazine capacity is 8 rounds, and weight is approximately 38 oz. There are numerous special features on the standard pistol.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1350	1050	—	—	—	—

NOTE: Add $70 for tritium night sights, $125 for Wilson adjustable sights, $275 for nights sights, ambi safety, hard chrome frame, $325 for Wilson adjustable sights, ambi safety, hard chrome frame.

Service Grade Protector

This model is fitted to a 5" slide with match barrel adjustable sights, and numerous other special features. Weight is about 38 oz. Black polymer finish on slide and frame. Introduced in 1996.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1695	1350	—	—	—	—

NOTE: Add $100 for stainless steel.

Service Grade Protector Compact

Same as above but fitted with a 4.25" match-grade barrel. Weight is about 34 oz. Introduced in 1996.

Service Grade Tactical

This .45 ACP pistol is fitted with a 5" tapered cone handfitted barrel. Cocking serrations on front and rear of slide. High-ride beavertail safety and other special features. Night sights are standard. Cocobolo grips. Weight is about 38 oz. finish is black polymer. Magazine capacity is 8 rounds. Introduced in 1999.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1725	1350	—	—	—	—

Service Grade Classic

This model has a 5" barrel, adjustable sights, hard chrome finish on frame, and other special features. Weight is about 38 oz. Introduced in 1996.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1795	1400	—	—	—	—

NOTE: Add $100 for stainless steel.

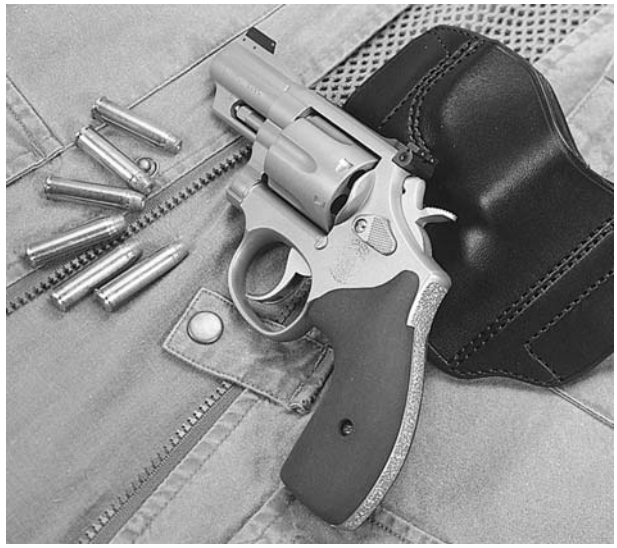
Service Grade Target

Chambered for the .45 ACP cartridge, this model features a 5" stainless steel match handfitted barrel with full length guide rod. Front and rear cocking serrations. Magazine well is beveled and grips are cocobolo. Numerous other special features. Weight is about 38 oz. Finish is black polymer. Magazine capacity is 8 rounds.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1725	1350	—	—	—	—

Custom Carry Revolver

Built on a Smith & Wesson .357 Magnum Model 66, this model features a 2.5" barrel with adjustable night sights. Cylinder is chambered and grip is black nylon with smooth finish. Stainless steel finish. Weight is about 30 oz.



NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
1075	850	—	—	—	—

.22 Classic Rimfire Pistol

Chambered for the .22 caliber rimfire cartridge and fitted with a 5" barrel. Hard chrome frame and black anodized slide. Weight is less than standard .45 caliber pistol. Introduced in 1996.

NIB	Exc.	V.G.	Good	Fair	Poor
1145	875	—	—	—	—

CUSTOM-BUILT PISTOLS

Wilson Custom pistols bear the Wilson Combat or Wilson Custom label on the right side of the frame on the dust cover. Full custom guns are typically built on a Colt, Springfield Armory, Norinco, STI, Strayer Voight or Wilson Combat gun.

Combat Classic Super Grade (Tactical Super Grade)

Fitted with a 5" match-grade handfit stainless steel barrel. Adjustable sights, high ride beavertail safety, contoured magazine well and polymer slide with hard chrome frame. Weight is approximately 45 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
3495	2750	—	—	—	—

Tactical Super Grade Compact

Similar to the above model but with a 4.1" match grade barrel. Magazine capacity is 7 rounds. Weight is about 40 oz. Introduced in 2003.

NIB	Exc.	V.G.	Good	Fair	Poor
3495	2750	—	—	—	—

Stealth Defense System

Built with a 4.25" slide with match-grade stainless steel barrel. This model features night sights, checkered front strap and mainspring spring housing with numerous special features. Black polymer finish. Weight is approximately 34 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
2895	2250	1500	—	—	—

Defensive Combat Pistol

This .45 ACP pistol is built with a 5" match-grade stainless steel barrel, night sights, and numerous special features. Finish is black polymer. Weight 38 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
2395	1850	1250	—	—	—

Classic Master Grade

This .45 ACP pistol is fitted with a 5" stainless steel handfitted match-grade barrel. Numerous special features such as ultralight hammer, ambidextrous safety, etc. Finish is stainless steel frame and black polymer slide. Weight is about 38 oz. and magazine capacity is 8 rounds.

NIB	Exc.	V.G.	Good	Fair	Poor
2895	2250	—	—	—	—

Tactical Elite

This is similar to other Wilson pistols with the addition of the special tactical heavy tapered cone barrel.

NIB	Exc.	V.G.	Good	Fair	Poor

1800	1450	—	—	—	—

NOTE: Add $100 for Armor-Tuff finish.

WINCHESTER
RIFLES AND SHOTGUNS

WINCHESTER REPEATING ARMS COMPANY

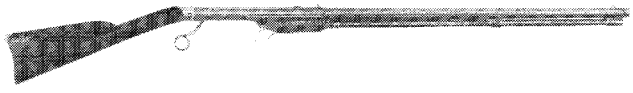
New Haven, Connecticut

The prices given here are for the most part standard guns without optional features that were so often furnished by the factory. These optional or extra-cost features are too numerous to list and can affect the price of a shotgun or rifle to an enormous degree. In some cases these options are one of a kind. Collectors and those interested in Winchester firearms have the benefit of some of the original factory records. These records are now stored in the Cody Firearms Museum, Buffalo Bill Historical Center, P.O. Box 1000, Cody, Wyoming (307) 587-4771. For a $25 fee the museum will provide factory letters containing the original specifications of certain Winchester models using the original factory records.

CAUTION: Buyers should confirm by Cody letter any special-order feature on any Winchester within the Cody record range before paying a premium for a scarce feature.

Hunt Repeating Rifle

Walter Hunt described his repeating rifle as the Volition Repeater. Hunt was granted U.S. patent number 6663 in August 1849 for his repeating rifle that was to pave the way for future generations of Winchester repeating rifles. Hunt's rifle design was unique and innovative as was his patent number 5701 for a conical lead bullet that was to be fired in his rifle. This ingenious bullet had a hole in its base filled with powder and closed by a disc with an opening in the middle to expel the ignition from an independent priming source that used priming pellets made of fulminate of mercury. The rifle actually worked but only the patent model was built; it is now in the Cody Firearms Museum.



Jennings

Second in the evolutionary line of Winchester rifles is the Jennings. Made by Robbins & Lawrence of Windsor, Vermont, this rifle incorporated the original concept of the Hunt design with the additional improvements utilized by Lewis Jennings. The Jennings rifle is important not only as a link in the chain of repeating-rifle development but also because it introduced Benjamin Henry Tyler to the concept of the tubular magazine lever-action repeating rifle. The Jennings rifle was built in three separate and distinct models. While total production of the three types was contracted for 5,000 guns, it is probable that only about 1,000 were actually produced.

First Model

The First Model Jennings was built in a .54 caliber, breech-loading, single-shot configuration with a ring trigger, oval trigger guard, and 26" barrel. A ramrod was fixed to the underside of the barrel as well. This variation was made from 1850 to 1851.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4000	1750	700

Second Model

The Second Model Jennings was produced adopting the improvements made by Horace Smith. This Second Model is a breech-loading repeating rifle with an under barrel magazine tube and a 26" barrel. The frame is sculptured, unlike the First Model. The ring trigger is still present, but the trigger guard was removed as part of the design change. The caliber remained a .54, and the rifle was fitted with a 25" barrel. The Second Model was produced in 1851 and 1852.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	8000	4000	1500

Third Model

The Third Model represents an attempt by investors to use the remaining parts and close out production. The .54 caliber Third Model was a muzzleloading rifle with a ramrod mounted under the barrel and a 26-1/2" barrel. The frame was the same as that used on the First Model, but the trigger was more of the conventional type. The trigger guard had a bow in the middle giving this model a distinctive appearance. This variation was produced in 1852 and marks the end of the early conceptual period in repeating rifle development.

Smith & Wesson Volcanic Firearms

An interesting connection in the evolution of the lever-action repeating firearm is found in the production of a small group of pistols and rifles built in Norwich, Connecticut, by Horace Smith and Daniel Wesson under the firm name of Smith & Wesson. The company built two types of Volcanic pistols. One was a large-frame model with an 8" barrel and chambered in .41 caliber. About 500 of these large frames were produced. The other pistol was a small-frame version with a 4" barrel chambered in .31 caliber. Slightly more of these small-frame pistols were built, about 700, than the large-frame version. In both variations the barrel, magazine, and frame were blued. Smith & Wesson also produced a lever-action repeating rifle. These rifles are exceedingly rare with fewer than 10 having been built. They were chambered for the .528 caliber and were fitted with 23" barrels. Because of the small number of rifles built, no value is offered.

Volcanic Firearms (Volcanic Repeating Arms Company)

With the incorporation of the Volcanic Repeating Arms Company, a new and important individual was introduced who would have an impact on the American arms industry for the next 100 years: Oliver F. Winchester. This new company introduced the Volcanic pistol using the improvements made by Horace Smith and Daniel Wesson. Volcanic firearms are marked on the barrel, "THE VOLCANIC REPEATING ARMS CO. PATENT NEW HAVEN, CONN. FEB. 14, 1854." The Volcanic was offered as a .38 caliber breechloading tubular magazine repeater with blued barrel and bronze frame. These pistols were available in three barrel lengths.

NOTE: A few Volcanic pistols were produced with detachable shoulder stocks. These are considered quite rare. For original guns with this option, the prices listed should be increased by 25 percent.

Volcanic Firearms (New Haven Arms Company)

In 1857 the New Haven Arms Company was formed to continue the production of the former Volcanic Repeating Arms Company. Volcanic firearms continued to be built but were now marked on the barrel, "NEW HAVEN, CONN. PATENT FEB. 14, 1854." The Volcanic pistols produced by the New Haven Arms Company were built in .30 caliber and used the same basic frame as the original Volcanic. These pistols were produced in 3-1/2" and 6" barrel lengths.

Henry Rifle

With the development of B. Tyler Henry's improvements in the metallic rimfire cartridge and his additional improvements in the Volcanic frame, the direct predecessor to the Winchester lever-action repeater was born. The new cartridge was the .44 caliber rimfire, and the Henry rifle featured a 24" octagon barrel with a tubular magazine holding 15 shells. The rifle had no forearm, but was furnished with a walnut buttstock with two styles of buttplates: an early rounded heel crescent shape seen on guns produced from 1860 to 1862 and the later sharper heel crescent butt found on guns built from 1863 to 1866. The early models, produced from 1860 to 1861, were fitted with an iron frame, and the later models, built from 1861 to 1866, were fitted with brass frames. About 14,000 Henry rifles were made during the entire production period; only about 300 were iron frame rifles.

Martially Inspected Henry Rifles

Beginning in 1863 the Federal Government ordered 1,730 Henry Rifles for use in the Civil War. Most of these government-inspected rifles fall into serial number range 3000 to 4000 while the balance are close to this serial-number range. They are marked "C.G.C." for Charles G. Chapman, the government inspector. These Henry rifles were used under actual combat conditions and for that reason it is doubtful that there are any rifles that would fall into the excellent condition category. Therefore no price is given.

NOTE: There are many counterfeit examples of these rifles. It is strongly advised that an expert in this field be consulted prior to a sale.

Winchester's Improvement Carbine

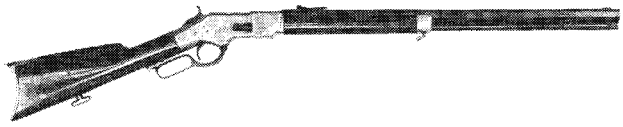
Overall length 43-1/2"; barrel length 24"; caliber .44 rimfire. Walnut stock with a brass buttplate; the receiver and magazine cover/forend of brass; the barrel and magazine tube blued. The magazine loading port is exposed by sliding the forend forward. This design was protected by O.F. Winchester's British Patent Number 3285 issued December 19, 1865. Unmarked except for internally located serial numbers. Approximately 700 manufactured in December of 1865 and early 1866, the majority of which were sold to Maximilian of Mexico. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition.

Exc.	V.G.	Good	Fair	Poor
33000	26000	18500	12500	9000

Model 1866

In 1866 the New Haven Arms Company changed its name to the Winchester Repeating Arms Company. The first firearm to be built under the Winchester name was the Model 1866. This first Winchester was a much-improved version of the Henry. A new magazine tube developed by Nelson King, Winchester's plant superintendent, was a vast improvement over the slotted magazine tube used on the Henry and its predecessor. The old tube allowed dirt to enter through the slots and was weakened because of it. King's patent, assigned to Winchester, featured a solid tube that was much stronger and reliable. His patent also dealt with an improved loading system for the rifle. The rifle now featured a loading port on the right side of the receiver with a spring-loaded cover. The frame continued to be made from brass. The Model 1866 was chambered for the .44 caliber Flat Rimfire or the .44 caliber Pointed Rimfire. Both cartridges could be used interchangeably.

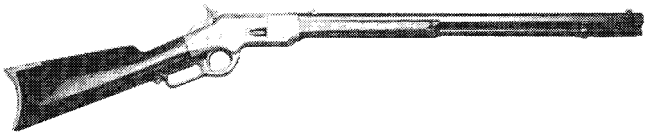
The barrel on the Model 1866 was marked with two different markings. The first, which is seen on early guns up to serial number 23000, reads "HENRY'S PATENT-OCT. 16, 1860 KING'S PATENT-MARCH 29, 1866." The second marking reads, "WINCHESTER'S-REPEATING-ARMS.NEW HAVEN, CT. KING'S-IMPROVEMENT-PATENTED MARCH 29, 1866 OCTOBER 16, 1860." There are three basic variations of the Model 1866:



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

1. Sporting Rifle round or octagon barrel. Approximately 28,000 were produced.
2. Carbine round barrel. Approximately 127,000 were produced.
3. Musket round barrel. Approximately 14,000 were produced.

The rifle and musket held 17 cartridges, and the carbine had a capacity of 13 cartridges. Unlike the Henry, Model 1866s were fitted with a walnut forearm. The Model 1866 was discontinued in 1898 with approximately 170,000 guns produced. The Model 1866 was sold in various special order configurations, such as barrels longer or shorter than standard, including engraved guns. The prices listed represent only standard-model 1866s. For guns with special-order features, an independent appraisal from an expert is highly recommended.



Courtesy Bonhams & Butterfields, San Francisco, California

First Model

This first style has both the Henry and King patent dates stamped on the barrel, a flat-loading port cover, and a two-screw upper tang. Perhaps the most distinctive feature of the First Model is the rapid drop at the top rear of the receiver near the hammer. This is often referred to as the "Henry Drop," a reference to the same receiver drop found on the Henry rifle. First Models will be seen up through the 15000 serial number range.

* Single-Shot

Third Model

The third style's most noticeable characteristic is the more moderately curved receiver shape at the rear of the frame. The serial number is now stamped in block numerals behind the trigger, thus allowing the numbers to be seen for the first time without removing the stock. The barrel marking is stamped with the Winchester address. The Third Model is found between serial numbers 25000 and 149000. For the first time, a musket version was produced in this serial-number range.

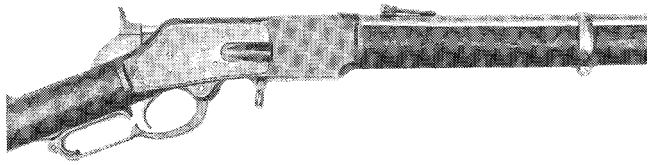
Model 1866 Iron Frame Rifle Musket

Overall length 54-1/2"; barrel length 33-1/4"; caliber .45 centerfire. Walnut stock with case hardened furniture, barrel burnished bright, the receiver case hardened. The finger lever catch mounted within a large bolster at the rear of the lever. Unmarked except for serial numbers that appear externally on the receiver and often the buttplate tang. Approximately 25 made during the early autumn of 1866. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition. Due to the recent identification of this model pricing schedules have yet to be established.

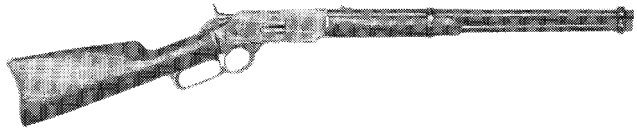


Model 1866 Iron Frame Swiss Sharpshooters Rifle

As above, but in .41 Swiss caliber and fitted with a Scheutzen style stock supplied by the firm of Weber Ruesch in Zurich. Marked Weber Ruesch, Zurich on the barrel and serial numbered externally. Approximately 400 to 450 manufactured in 1866 and 1867. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition. Due to the recent identification of this model pricing schedules have yet to be established.

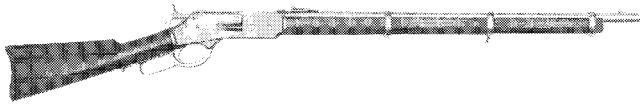
Model 1867 Iron Frame Carbine

Overall length 39-1/4"; barrel length 20"; caliber .44 rimfire. Walnut stock with case hardened furniture; the barrel and magazine tube blued; the receiver case hardened. The finger lever catch mounted within the rear curl of the lever. Unmarked except for serial numbers that appear externally on the receiver and often the buttplate tang. Approximately 20 manufactured. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition. Due to the recent identification of this model pricing schedules have yet to be established.



Model 1868 Iron Frame Rifle Musket

Overall length 49-1/2" (.455 cal.), 50-1/2" or 53" (.45 and .47 cal.); barrel length 29-1/2" (.455 cal.) and 30-1/4" or 33" (.45 and .47 cal.); calibers .45, .455, and .47 centerfire. Walnut stock with case hardened or burnished bright (.45 and .47 cal.) furniture; the barrel burnished bright; the receiver case hardened or burnished bright (.45 and .47 cal.). The finger lever catch mounted on the lower receiver tang. The rear of the finger lever machined with a long flat extension on its upper surface. Unmarked except for serial number. Approximately 30 examples made in .45 and .455 caliber and 250 in .47 caliber. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition. Due to the recent identification of this model pricing schedules have yet to be established.



Model 1868 Iron Frame Carbine

Overall length 40"; barrel length 20"; caliber .44 centerfire. Walnut stock with case hardened furniture; barrel and magazine tube blued; the receiver case hardened. The finger lever catch as above. Unmarked except for serial numbers (receiver and buttplate tang). Approximately 25 manufactured. Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition. Due to the recent identification of this model pricing schedules have yet to be established.

Model 1873

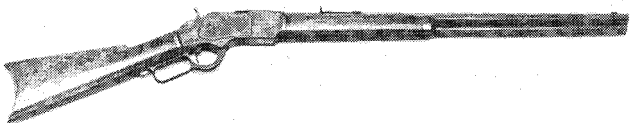
This Winchester rifle was one of the most popular lever-actions the company ever produced. This is the "gun that won the West" and with good reason. It was chambered for the more powerful centerfire cartridge, the .44-40. Compared to the .44 Henry, this cartridge was twice as good. With the introduction of the single-action Colt pistol in 1878, chambered for the same cartridge, the individual had the convenience of a pistol for protection and the accuracy of the Winchester for food and protection. The .44-40 was the standard cartridge for the Model 1873. Three additional cartridges were offered but were not as popular as the .44. The .38-40 was first offered in 1879 and the.32-20 was introduced in 1882. In 1884 the Model 1873 was offered in .22 caliber rimfire, with a few special order guns built in .22 extra long rimfire. Approximately 19,552 .22 caliber Model 1873s were produced.

Early Model 1873s were fitted with an iron receiver until 1884, when a steel receiver was introduced. The Model 1873 was offered in three styles:

1. Sporting Rifle, 24" round, octagon, or half-octagon barrel. Equipped standard with a crescent iron buttplate, straight-grip stock and capped forearm.
2. Carbine, 20" round barrel. Furnished standard with a rounded iron buttplate, straight-grip stock, and carbine style forend fastened to the barrel with a single barrel band.
3. Musket, 30" round barrel. Standard musket is furnished with a nearly full-length forearm fastened to the barrel with three barrel bands. The buttstock has a rounded buttplate.

The upper tang was marked with the model designation and the serial number was stamped on the lower tang. Caliber stampings on the Model 1873 are found on the bottom of the frame and on the breech end of the barrel. Winchester discontinued the Model 1873 in 1919, after producing about 720,000 guns.

The Winchester Model 1873 was offered with a large number of extra-cost options that greatly affect the value of the gun. For example, Winchester built two sets of special Model 1873s: the 1-of-100 and the 1-of-1000. Winchester sold only eight 1-of-100 Model 1873s, and 136 of the 1-of-1000 guns that were built. In 1991 a few of these special guns were sold at auction and brought prices exceeding $75,000. The prices listed here are for standard guns only. For Model 1873 with special features, it is best to secure an expert appraisal. Model 1873s with case colored receivers will bring a premium.



Courtesy Bonhams & Butterfields, San Francisco, California

A Winchester Model 1873 rifle, serial number 27, sold at auction for $55,000. Fitted with a 24" round barrel with experimental button magazine. Set trigger and blued finish. Condition is 90 percent original blue on action and 70 percent on barrel. Stock is very good.
Little John's Auction Service, Inc.

A First Model 1873 rifle sold at auction for $60,000. Factory engraved. Chambered for the .44-40 and fitted with a 24" octagon heavy barrel. Checkered fancy walnut stock. Set trigger. Tang sight. Condition is 96 percent original blue with 80 percent case colors.
Little John's Auction Service, Inc.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

First Model

The primary difference between the various styles of the Model 1873 is found in the appearance and construction of the dust cover. The First Model has a dust cover held in place with grooved guides on either side. A checkered oval finger grip is found on top of the dust cover. The latch that holds the lever firmly in place is anchored into the lower tang with visible threads. On later First Models, these threads are not visible. First Models appear from serial number 1 to about 31000.

Model 1873 .22 Rimfire Rifle

Winchester's first .22 caliber rifle and the first .22 caliber repeating rifle made in America was introduced in 1884 and discontinued in 1904. Its drawback was the small caliber. The general preference during this period of time was for the larger-caliber rifles. Winchester sold a little more than 19,000 .22 caliber Model 1873s.

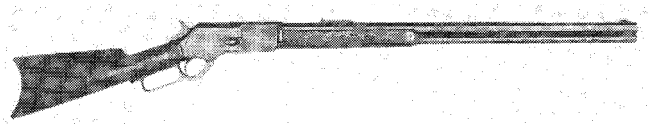
Model 1876

Winchester's Model 1876, sometimes referred to as the Centennial Model, was the company's response to the public's demand for a repeater rifle capable of handling larger and more potent calibers. Many single-shot rifles were available at this time to shoot more powerful cartridges, and Winchester redesigned the earlier Model 1873 to answer this need. The principal changes made to the Model 1873 were a larger and stronger receiver to handle more powerful cartridges. Both the carbine and the musket had their forearms extended to cover the full length of the magazine tube. The carbine barrel was increased in length from 20" to 22", and the musket barrel length was increased from 30 to 32". The Model 1876 was the first Winchester to be offered with a pistol-grip stock on its special

Sporting Rifle. The Model 1876 was available in these calibers: .45-77 W.C.F., .50-95 Express, .45-60 W.C.F., .40-60 W.C.F. The Model 1876 was offered in four different styles:

1. Sporting Rifle, 28" round, octagon, or half-octagon barrel. This rifle was fitted with a straight-grip stock with crescent iron buttplate. A special sporting rifle was offered with a pistol-grip stock.
2. Express Rifle, 26" round, octagon, or half-octagon barrel. The same sporting rifle stock was used.
3. Carbine, 22" round barrel with full length forearm secured by one barrel band and straight-grip stock.
4. Musket, 32" round barrel with full-length forearm secured by one barrel band and straight-grip stock. Stamped on the barrel is the Winchester address with King's patent date. The caliber marking is stamped on the bottom of the receiver near the magazine tube and the breech end of the barrel. Winchester also furnished the Model 1876 in 1-of-100 and 1-of-1000 special guns. Only 8 1-of-100 Model 1876s were built and 54 1-of-1000 76s were built. As with their Model 1873 counterparts, these rare guns often sell in the $75,000 range or more. Approximately 64,000 Model 1876s were built by Winchester between 1876 and 1897. As with other Winchesters, the prices given are for standard guns.

First Model



As with the Model 1873, the primary difference in model types lies in the dust cover. The First Model has no dust cover and is seen between serial number 1 and 3000.

Winchester Hotchkiss Bolt-Action Rifle

This model is also known as the Hotchkiss Magazine Gun or the Model 1883. This rifle was designed by Benjamin Hotchkiss in 1876, and Winchester acquired the manufacturing rights to the rifle in 1877. In 1879 the first guns were delivered for sale. The Hotchkiss rifle was a bolt-action firearm designed for military and sporting use. It was the first bolt-action rifle made by Winchester. The rifle was furnished in .45-70 Government, and although the 1884 Winchester catalog lists a .40-65 Hotchkiss as being available, no evidence exists that such a chamber was ever actually furnished. The Model 1883 was available in three different styles:

1. Sporting Rifle, 26" round, octagon, or half-octagon barrel fitted with a rifle-type stock that included a modified pistol grip or straight-grip stock.
2. Carbine, 24" round or 22-1/2" round barrel with military-style straight-grip stock.

A Third Model 1876 Deluxe rifle sold at auction for $24,000. Chambered for the .50-95 cartridge and fitted with a 22" round barrel. Checkered pistol grip stock with fancy wood. Condition is 90 percent case colors and 93 percent original blue. Stock in very good condition. *Little John's Auction Service, Inc.*

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

3. Musket, 32" or 28" round barrel with almost full-length military-style straight-grip stock. Winchester produced the Model 1883 until 1899, having built about 85,000 guns.

First Model

This model has the safety and a turn button magazine cut-off located above the trigger guard on the right side. The Sporting Rifle is furnished with a 26" round or octagon barrel while the carbine has a 24" round barrel with a saddle ring on the left side of the stock. The musket has a 32" round barrel with two barrel bands, a steel forearm tip, and bayonet attachment under the barrel. The serial number range for the First Model is between 1 and about 6419.

Second Model

On this model the safety is located on the top left side of the receiver, and the magazine cutoff is located on the top right side of the receiver to the rear of the bolt handle. The sporting rifle remains unchanged from the First Model with the above exceptions. The carbine has a 22-1/2" round barrel with a nickeled forearm cap. The musket now has a 28" barrel. Serial number range for the Second Model runs from 6420 to 22521.

Model 1885 (Single-Shot)

The Model 1885 marks an important development between Winchester and John M. Browning. The Single-Shot rifle was the first of many Browning patents that Winchester would purchase and provided the company with the opportunity to diversify its firearms line. The Model 1885 was the first single-shot rifle built by Winchester. The company offered more calibers in this model than any other. A total of 45 centerfire calibers were offered from the .22 extra long to the 50-110 Express, as well as 14 rimfire caliber from .22 B.B. cap to the .44 Flat Henry. Numerous barrel lengths, shapes, and weights were available as were stock configurations, sights, and finishes. These rifles were also available in solid frame and takedown styles. One could almost argue that each of the 139,725 Model 1885s built are unique. Many collectors of the Winchester Single-Shot specialize in nothing else. For this reason it is difficult to provide pricing that will cover most of the Model 1885s that the collector will encounter. However the prices given here are for standard guns in standard configurations.

The Model 1885 was offered in two basic frame types:

A. The High Wall was the first frame type produced and is so called because the frame covers the breech and hammer except for the hammer spur.

B. The breech and hammer are visible on the Low Wall frame with its low sides. This frame type was first introduced around the 5000 serial number range.

Both the High Wall and the Low Wall were available in two type frame profiles; the Thickside and the Thinside. The Thickside frame has flat sides that do not widen out to meet the stock. The Thickside is more common on the low wall rifle and rare on the High Walls.

The Thinside frame has shallow milled sides that widen out to meet the stock. Thinside frames are common on High Wall guns and rare on Low Wall rifles.

1. The standard High Wall rifle was available with octagon or round barrel with length determined by caliber. The butt stock and forearm were plain walnut with crescent buttplate and blued frame.
2. The standard Low Wall featured a round or octagon barrel with length determined by caliber and a plain walnut stock and forearm with crescent buttplate.
3. The High Wall musket most often had a 26" round barrel chambered for the .22 caliber cartridge. Larger calibers were available as were different barrel lengths. The High Wall Musket featured an almost full length forearm fastened to the barrel with a single barrel band and rounded buttplate.
4. The Low Wall musket is most often referred to as the Winder Musket named after the distinguished marksman, Colonel C.B. Winder. This model features a Lyman receiver sight and was made in .22 caliber.
5. The High Wall Schuetzen rifle was designed for serious target shooting and was available with numerous extras including a 30" octagon barrel medium weight without rear sight seat; fancy walnut checkered pistol grip Schuetzen-style cheekpiece; Schuetzen-style buttplate; checkered forearm; double set triggers; spur finger lever, and adjustable palm rest.
6. The Low Wall carbine was available in 15", 16", 18", and 20" round barrels. The carbine featured a saddle ring on the left side of the frame and a rounded buttplate.
7. The Model 1885 was also available in a High Wall shotgun in 20 gauge with 26" round barrel and straight-grip stock with shotgun style rubber buttplate. The Model 1885 was manufactured between 1885 and 1920 with a total production of about 140,000 guns.

CALIBER NOTE: As stated above it is difficult to provide pricing on specific rifles, especially calibers, because of the wide range of variables. However, the collector may find it useful to know that the most common rimfire calibers were the .22 Short, .22 WCF, and .22 Long, in that order, with the .22 Long Rifle a distant fourth. The most common centerfire chambers were the .32 WCF and the .32-40. Other popular centerfire calibers were the .38-55, .25-20, .44 WCF, .32 Long WCF, and the .45-70. There were a number of chamberings that are extremely rare (one of each built). It is strongly recommended that research is done prior to a sale.

NOTE: Model 1885s with case colored frames bring a premium of 25 percent over guns with blued frames. Model 1885s in calibers .50-110 and .50-100 will bring a premium depending on style and configuration.

Model 1886

Based on a John Browning patent, the Model 1886 was one of the finest and strongest lever-actions ever utilized in a Winchester rifle. Winchester introduced the Model 1886 in order to take advantage of the more powerful centerfire cartridges of the time.

Model 1886 rifles and carbines were furnished with walnut stocks, case hardened frames, and blued barrels and magazine tubes. In 1901 Winchester discontinued the use of case hardened frames on all its rifles and used blued frames instead. For this reason, case hardened Model 1886 rifles will bring a premium. Winchester provided a large selection of extra cost options on the Model 1886, and for rifles with these options, a separate valuation should be made by a reliable source. The Model 1886 was produced from 1886 to 1935 with about 160,000 in production.

The rifle was available in 10 different chambers:

.45-70 U.S. Government	.50-110 Express
.45-90 W.C.F.	.40-70 W.C. F.
.40-82 W.C.F.	.38-70 W.C. F.
.40-65 W.C.F.	.50-100-450
.38-56 W.C.F.	.33 W.C. F.

The most popular caliber was the .45-70 Government. Prices of the Model 1886 are influenced by caliber, with the larger calibers bringing a premium. The 1886 was available in several different configurations.

1. Sporting Rifle, 26", round, octagon, or half-octagon barrel, full or half magazine and straight-grip stock with plain forearm.
2. Fancy Sporting Rifle, 26", round or octagon barrel, full or half magazine and fancy checkered walnut pistol-grip stock with checkered forearm.
3. Takedown Rifle, 24" round barrel, full or half magazine with straight-grip stock fitted with shotgun rubber buttplate and plain forearm.
4. Extra Lightweight Takedown Rifle, 22" round barrel, full or half magazine with straight-grip stock fitted with shotgun rubber buttplate and plain forearm.
5. Extra Lightweight Rifle, 22" round barrel, full or half magazine with straight-grip stock fitted with a shotgun rubber butt-plate and plain forearm.
6. Carbine, 22" round barrel, full or half magazine, with straight-grip stock and plain forearm.
7. Musket, 30" round barrel, musket-style forearm with one barrel band. Military-style sights. About 350 Model 1886 Muskets were produced.

Model 71

When Winchester dropped the Model 1886 from its line in 1935, the company replaced its large-bore lever-action rifle with the Model 71 chambered for the .348 caliber. The Model 71 is similar in appearance to the Model 1886 with some internal parts strengthened to handle the powerful .348 cartridge. The rifle was available in three basic configurations:

1. Standard Rifle, 24" round barrel, 3/4 magazine, plain walnut pistol-grip stock and semi-beavertail forearm.
2. Standard Rifle (Carbine), 20" round barrel, 3/4 magazine, plain walnut pistol-grip stock and semi-beavertail forearm.
3. Deluxe Rifle, 24" round barrel, 3/4 magazine, checkered walnut pistol-grip stock and checkered semi-beavertail forearm. The frames and barrels were blued on all models of this rifle.
4. Deluxe Rifle (Carbine), 20" round barrel, 3/4 magazine, checkered walnut pistol-grip stock and checkered semi-beavertail forearm. The frames and barrels were blued on all models of this rifle.

The Model 71 was produced from 1935 to 1957 with about 47,000 built.

Deluxe Rifle (Carbine)

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
3750	3000	2000	1250	700

NOTE: For pre-war Model 71s add a premium of 20 percent. The pre-war Model 71 has a longer tang than its post-war equivalent. For a bolt peep sight add 10 percent.

Model 1892

The Model 1892 was an updated successor to the Model 1873 using a scaled down version of the Model 1886 action. The rifle was chambered for the popular smaller cartridges of the day, namely the .25-20, .32-20, .38-40, .44-40, and the rare .218 Bee. The rifle was available in several different configurations:

1. Sporting Rifle, solid frame or takedown (worth an extra premium of about 20 percent), 24" round, octagon, or half-octagon barrel with 1/2, 2/3, or full magazines. Plain straight-grip walnut stock with capped forearm.
2. Fancy Sporting Rifle, solid frame or takedown (worth 20 percent premium), 24" round, octagon, or half-octagon barrel with 1/2, 2/3, or full magazine. Checkered walnut pistol-grip stock with checkered capped forearm.
3. Carbine, 20" round barrel, full or half magazine, plain walnut straight-grip stock with one barrel band forearm. Carbines were offered only with solid frames.

4. Trapper's Carbine, 18", 16", 15", or 14" round barrel with the same dimensions of standard carbine. Federal law prohibits the possession of rifles with barrel lengths shorter than 16". The Model 1892 Trapper's Carbine can be exempted from this law as a curio and relic with a federal permit providing the trapper is an original trapper and left the factory with the short trapper barrel.
5. Musket, 30" round barrel with full magazine. Almost full-length forearm held by two barrel bands. Buttstock is plain walnut with straight grip.

The Model 1892 was built between 1892 and 1932 with slightly more than 1 million sold. The Model 1892 carbine continued to be offered for sale until 1941.

NOTE: Antique Winchester Model 1892s (pre-1898 manufacture) will bring a premium of 10 percent.

Model 1894

Based on a John M. Browning patent, the Model 1894 was the most successful centerfire rifle Winchester ever produced. This model is still in production, and the values given here reflect those rifles produced before 1964, or around serial number 2550000. The Model 1894 was the first Winchester developed especially for smokeless powder and was chambered for these cartridges: .32-40, .38-55, .25-35 Winchester, .30-30 Winchester, and the .32 Winchester Special. The rifle was available in several different configurations:

1. Sporting Rifle, 26" round, octagon, or half-octagon barrel, in solid frame or takedown. Full, 2/3 or 1/2 magazines were available. Plain walnut straight or pistol-grip stock with crescent buttplate and plain capped forearm.
2. Fancy Sporting Rifle, 26" round, octagon, or half-octagon barrel, in solid frame or takedown. Full, 2/3, or 1/2 magazines were available. Fancy walnut checkered straight or pistol-grip stock with crescent buttplate and checkered fancy capped forearm.
3. Extra lightweight Rifle, 22" or 26" round barrel with half magazine. Plain walnut straight-grip stock with shotgun buttplate and plain capped forearm.
4. Carbine, 20" round barrel, plain walnut straight-grip stock with carbine style buttplate. Forearm was plain walnut uncapped with one barrel band. Carbines were available with solid frame only. Carbines made prior to 1925 were fitted with a saddle ring on the left side of receiver and worth a premium over carbines without saddle ring.
5. Trapper's Carbine, 18", 16", 15", or 14". Buttstock, forearm, and saddle ring specifications same as standard carbine. All Model 1894s were furnished with blued frames and barrels, although case hardened frames were available as an extra-cost option. Case colored Model 1894s are rare and worth a considerable premium, perhaps as much as 1,000 percent. Guns with extra-cost options should be evaluated by an expert to determine proper value. Between 1894 and 1963, approximately 2,550,000 Model 1894s were sold.

NOTE: Antique Winchester Model 1894s (pre-1898 manufacture) will bring a premium of 10 percent. First year production

guns, October 1894 to December 1894, documented by the Cody Museum will command a 100 percent premium.

First Model Sporting Rifle

Very early model that incorporates a screw entering the receiver over the loading port from the outside. Rare.

Exc.	V.G.	Good	Fair	Poor
6500	4250	2500	1500	700

NOTE: Add 30 percent for carbines chambered for .25-35 or .38-55 calibers.

Model 53

This model was in fact a slightly more modern version of the Model 1892 offered in these calibers: .25-20, .32-20, and the .44-40. It was available in only one style: the Sporting Rifle, 22" round barrel, half magazine, straight- or pistol-grip plain walnut stock with shotgun butt. It was available in solid frame or takedown with blued frame and barrel. The Model 53 was produced from 1924 to 1932 with about 25,000 built.

Sporting Rifle

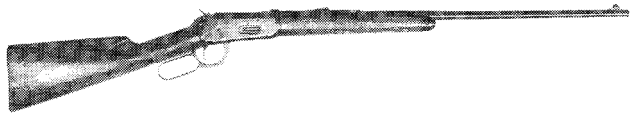
Exc.	V.G.	Good	Fair	Poor
3000	2000	1000	500	300

NOTE: Add 10 percent for takedown model. Add 40 percent for rifles chambered for .44-40 cartridge. A few of these rifles were fitted with stainless steel barrel in the early 1930s. If the black paint on these barrels is in good condition, they will bring a substantial premium.

Model 55

This model was a continuation of the Model 1894 except in a simplified version. Available in the same calibers as the Model 1894, this rifle could be ordered only with a 24" round barrel, plain walnut straight-grip stock with plain forend and shotgun butt. Frame and barrel were blued with solid or takedown features. This model was produced between 1924 and 1932 with about 21,000 sold. Serial numbers for the Model 55 were numbered separately until about serial number 4500; then the guns were numbered in the Model 1894 sequence.

Standard Rifle



Exc.	V.G.	Good	Fair	Poor
1500	1000	650	450	200

NOTE: .25-35 caliber will bring about a 60 percent premium. Add 10 percent for models with solid frame.

Model 64

An improved version of the Model 55, this gun featured a larger magazine, pistol-grip stock, and forged front sight ramp. The trigger pull was also improved. Frame and barrel were blued. Chambered for the .25-35 Win., .30-30 Win., .32 Win. Special, and the .219 zipper added in 1938 (and discontinued in the Model 64 in 1941). Serial number of the Model 64 was concurrent with the Model 1894. Built between 1933 and 1957, approximately 67,000 were sold. This model was reintroduced in 1972 and discontinued in 1973. The values listed are for the early version only.

Standard Rifle

Carbine

20" barrel.

Exc.	V.G.	Good	Fair	Poor
1550	1000	650	500	250

NOTE: For Deluxe model add 50 percent to above prices. For Carbine model add 50 percent to above prices. For rifles chambered for the .219 Zipper and .25-35 cartridges add 50 percent. Add 10 percent for bolt peep sight. Model 64s in .219 Zipper left the factory with bolt peep sights as original equipment.

Model 65

This model was a continuation of the Model 53 and was offered in three calibers: .25-20, .32-20, and .218 Bee. It had several improvements over the Model 53, namely the magazine capacity was increased to seven cartridges, forged ramp for front sight, and a lighter trigger pull. The Model 65 was available only in solid blued frame with blued barrel and pistol grip with plain walnut stock. Only about 5,700 of these rifles were built between 1933 and 1947.

NOTE: Add 10 percent for bolt peep sight. Model 65s in .218 Bee left the factory with bolt peep sights as original equipment.

Model 1895

The Model 1895 was the first nondetachable box magazine rifle offered by Winchester. Built on a John M. Browning patent, this rifle was introduced by Winchester to meet the demand for a rifle that could handle the new high-power, smokeless hunting cartridges of the period. The Model 1895 was available in these calibers: .30-40 Krag, .38-72 Winchester, .40-72 Winchester, .303 British, .35 Winchester, .405 Government, 7.62 Russian, .30-03, and .30-06. The rifle gained fame as a favorite hunting rifle of Theodore Roosevelt. Because of its box magazine, the Model 1895 has a distinctive look like no other Winchester lever-action rifle. The rifle was available in several different configurations:

1. Sporting Rifle, 28" or 24" (depending on caliber) round barrel, plain walnut straight-grip stock with plain forend. The first 5,000 rifles were manufactured with flat-sided receivers, and the balance of production were built with the receiver sides contoured. After serial-number 60000, a takedown version was available.
2. Fancy Sporting Rifle, 28" round barrel, fancy walnut checkered straight-grip stock and fancy walnut checkered forearm. Rifles with serial numbers below 5000 had flat sided frames.
3. Carbine, 22" round barrel, plain walnut straight-grip stock with military-style hand guard forend. Some carbines are furnished with saddle rings on left side of receiver.
4. Musket:
   A. Standard Musket, 28" round, plain walnut straight-grip stock with musket style forend with two barrel bands.
   B. U.S. Army N.R.A. Musket, 30" round barrel, Model 1901 Krag-Jorgensen rear sight. Stock similar to the standard musket. This musket could be used for "Any Military Arm" matches under the rules of the National Rifle Association.
   C. N.R.A. Musket, Models 1903 and 1906, 24" round barrel with special buttplate. Also eligible for all matches under "Any Military Arm" sponsored by the NRA. This musket was fitted with the same stock as listed above.
   D. U.S. Army Musket, 28" round barrel chambered for the .30-40 Krag. Came equipped with or without knife bayonet. These muskets were furnished to the U.S. Army for use during the Spanish-American War and are "US" marked on the receiver.
   E. Russian Musket, similar to standard musket but fitted with clip guides in the top of the receiver and with bayonet. Approximately 294,000 Model 1895 Muskets were sold to the Imperial Russian Government between 1915 and 1916. The first 15,000 Russian Muskets had 8" knife bayonets, and the rest were fitted with 16" bayonets.

The Model 1895 was produced from 1895 to 1931 with about 426,000 sold.

NOTE: Add a 10 percent premium for rifles built before 1898.

Breechloading Double-Barrel Shotgun

Winchester imported an English-made shotgun sold under the Winchester name between 1879 and 1884. The gun was available in 10 and 12 gauge with 30" or 32" Damascus barrels. It was sold in five separate grades referred to as "classes." The lowest grade was the "D" and the best grade was called the "Match Grade." These were marked on the sidelocks. The center rib was stamped "Winchester Repeating Arms Co., New Haven, Connecticut, U.S.A." Prices shown for "D" grade. Add 10 percent for "C" grade; 20 percent for "B" grade; and 30 percent for "A" grade. About 10,000 of these guns were imported by Winchester.

Model 1887 Shotgun

Winchester enjoyed a great deal of success with its imported English shotgun, and the company decided to manufacture a shotgun of its own. In 1885 it purchased the patent for a lever-action shotgun designed by John M. Browning. By 1887 Winchester had delivered the first model 1887 in 12 gauge and shortly after offered the gun in 10 gauge. Both gauges were offered with 30" or 32" Full choked barrels, with the 30" standard on the 12 gauge and 32" standard on the 10 gauge. A Riot Gun was offered in 1898 both in 10, and 12 gauge with 20" barrels choked cylinder. Both variations of the Model 1887 were offered with plain walnut pistol-grip stocks with plain forend. The frame was case hardened and the barrel blued. Between 1887 and 1901 Winchester sold approximately 65,000 Model 1887 shotguns.

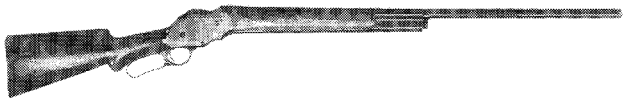
Model 1901 Shotgun

This model is a redesign of the Model 1887 shotgun and was offered in 10 gauge only with a 32" barrel choked Full, Modified, or Cylinder. The barrel was reinforced to withstand the new smokeless powder loads and the frame was blued instead of case hardened. The stock was of plain walnut with a modified pistol and plain forearm. The Model 1901 was built between 1901 and 1920 with about 65,000 guns sold.

Standard Shotgun



Exc.	V.G.	Good	Fair	Poor
1500	1000	600	400	250

Model 1893

This was the first slide-action repeating shotgun built by Winchester. It featured an exposed hammer and side ejection. Based on a John M. Browning patent, this model was not altogether satisfactory. The action proved to be too weak to handle smokeless loads, even though the gun was designed for black powder. The gun was offered in 12 gauge with 30" or 32" barrels choked Full. Other chokes were available on special order and will command a premium. The stock was plain walnut with a modified pistol grip, grooved slide handle, and hard rubber buttplate. The receiver and barrel were blued. Winchester produced the Model 1893 between 1893 and 1897, selling about 31000 guns.

Standard Shotgun

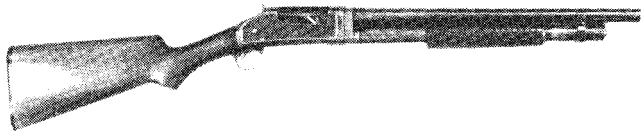
Exc.	V.G.	Good	Fair	Poor
1000	700	600	325	250

Model 1897

The Model 1897 replaced the Model 1893, and while similar to the Model 1893, the new model had several improvements such as a stronger frame, chamber made longer to handle 2-3/4" shells, frame top was covered to force complete side ejection, the stock was made longer and with less drop. The Model 1897 was available in 12 or 16 gauge with the 12 gauge offered either in solid or takedown styles and the 16 gauge available in takedown only. The Model 1897 was available with barrel lengths of 20", 26", 28", 30", and 32" and in practically all choke options from full to cylinder. The shotgun could be ordered in several different configurations:



1. Standard Gun, 12 or 16 gauge, 30" barrel in 12 gauge and 28" barrel in 16 gauge, with plain walnut modified pistol-grip stock and grooved slide handle. Steel buttplate standard.
2. Trap Gun 12 or 16 gauge, 30" barrel in 12 gauge and 28" barrel in 16 gauge, fancy walnut stock with oil finish checkered pistol-grip or straight-grip stock with checkered slide handle. Marked "TRAP" on bottom of frame.
3. Pigeon Gun, 12 or 16 gauge, 28" barrel on both 12 and 16 gauge, straight- or pistol-grip stock same as Trap gun, receiver hand engraved.
4. Tournament Gun, 12 gauge only with 30" barrel, select walnut checkered straight-grip stock and checkered slide handle, top of receiver is matted to reduce glare.
5. Brush Gun, 12 or 16 gauge, 26" barrel, Cylinder choke, has a slightly shorter magazine tube than standard gun, plain walnut modified pistol-grip stock with grooved slide handle.
6. Brush Gun, Takedown, same as above with takedown feature and standard length magazine tube.
7. Riot Gun, 12 gauge, 20" barrel bored to shoot buckshot, plain walnut modified pistol-grip stock with grooved slide handle. Solid frame or takedown.
8. Trench Gun, same as Riot Gun but fitted with barrel hand guard and bayonet.

The Winchester Model 1897 was a great seller for Winchester. During its 60-year production span, 1,025,000 guns were sold.

Model 1890

The Model 1890 was the first slide-action rifle ever produced by Winchester. Designed by John and Matthew Browning, this rifle was chambered for the .22 Short, Long, and Winchester Rimfire cartridges (the WRF cartridge was developed by Winchester specifically for the Model 1890) not on an interchangeable basis. In 1919 the .22 LR cartridge was offered as well. The rifle was a slide-action top ejecting rifle with an 18" under barrel magazine tube. All Model 1890s were furnished standard with plain walnut straight stocks with crescent buttplate and 12 groove slide handle. This rifle was one of the company's best selling small caliber firearms and was in worldwide use. The Model 1890 came in three separate and distinct variations that greatly affect its value:

1. First Model, solid frame, 24" octagon barrel, case hardened frame, and fixed rear sight. Approximately 15,552 of these First Model guns were produced, and their distinctive feature is concealed locking lugs and solid frame. Serial numbered on the lower tang only. Built from 1890 to 1892.
2. Second Model, takedown, 24" octagon barrel, case hardened frame, and adjustable rear sight. Serial numbered from 15553 to 112970 (on lower tang only) these Second Model guns feature the same concealed locking lugs but with the added takedown feature. A Deluxe version was offered with fancy walnut checkered straight- or pistol-grip stock and grooved slide handle.

2A. Second Model (blued frame variation), same as above but with blued frame. Serial numbered from 112971 to 325250 (on lower tang until 232328, then also on bottom front end of receiver) these blued frame Second Models are much more numerous than the case hardened variety. A Deluxe version was offered with fancy walnut checkered straight- or pistol-grip stock and grooved slide handle.

3. Third Model, takedown, 24" octagon barrel, blued frame, adjustable rear sight. Serial numbered from 325251 to as high as 853000 (numbered on both the lower tang and bottom front of receiver) the distinctive feature of the Third Model is the locking cut made on the front top of the receiver to allow the breech bolt to lock externally. A Deluxe version was offered with fancy walnut checkered stock, straight or pistol grip with grooved slide handle. Winchester offered many extra-cost options for this rifle that will greatly affect the value. Secure an expert appraisal before proceeding. The Model 1890 was produced from 1890 to 1932 with approximately 775,000 guns sold.

Model 1906

In 1906 Winchester decided to offer a lower-cost version of the Model 1890. The Model 1906 used the same receiver but was fitted with a 20" round barrel and plain gumwood straight-grip stock. When the Model 1906 was first introduced, it sold for two-thirds of the price of the Model 1890. For the first two years the gun was chambered for the .22 Short cartridge only. In 1908 the rifle was modified to shoot .22 Short, Long, and LR cartridges interchangeably. This modification ensured the Model 1906's success, and between 1906 and 1932 about 800,000 were sold. All Model 1906s were of the takedown variety. The Model 1906 is available in three important variations:

1. 22 Short Only, 20" round barrel, straight-grip gumwood stock and smooth slide handle. These were built from serial number 1 to around 113000.
2. Standard Model 1906, 20" round barrel, straight-grip gumwood stock with 12 groove slide handle. Serial numbered from 113000 to 852000.
3. Model 1906 Expert, 20" round barrel, pistol-grip gumwood stock with fluted smooth slide handle. Expert was available from 1918 to 1924 and was offered in three different finishes regular blued finish, half nickel (receiver, guard, and bolt), and full nickel (receiver, guard, bolt, and barrel nickeled).

Model 61

Winchester developed the Model 61 in an attempt to keep pace with its competitors' hammerless .22 rifles. The Model 61 featured a 24" round or octagonal barrel and could be ordered by the customer in a variety of configurations. Collector interest in this rifle is high because of the fairly large number of variations. The Model 61 is often considered a companion to the Winchester Model 12 and Model 42 shotguns.The following is a list of chamber and barrel variations found in this model:

1.24" round barrel, .22 Short, Long, LR
2.24" octagonal barrel, .22 Short only add 200 percent.
3.24" octagonal barrel, .22 LR only add 200 percent.
4.24" octagonal barrel, .22 W.R.F. only add 200 percent.
5.24" round barrel, .22 LR Shot only add 300 percent.
5A.24" round barrel, shot only Routledge bore add 300 percent.
6.24" round barrel, .22 W.R.F. only add 200 percent.
7.24" round barrel, .22 LR only add 200 percent.
8.24" round barrel, .22 Winchester Magnum add 200 percent.
9.24" round barrel, .22 Short only add 200 percent.

The Model 61 was fitted with a plain walnut pistol-grip stock with grooved slide handle. All Model 61s were of the take down variety. Pre-war models will have a short slide handle. Manufactured between 1932 and 1963, approximately 342,000 guns were sold.

Pre-war Model 61

NOTE: This variation (Model 61 Magnum) was produced from 1960 to 1963.

Model 62 and 62A

When the Model 1890 and Model 1906 were dropped from the Winchester product line in 1932, the company introduced the Model 62 to take their place. An updated version of the earlier slide-action .22 rifles, the Model 62 was fitted with a 23" round barrel and was capable of shooting .22 Short, Long, and LR cartridges interchangeably. Winchester offered a Gallery ver-

sion of the Model 62 that was chambered for .22 Short only. Some of these Gallery guns have "Winchester" stamped on the left side of the receiver. Winchester Model 62 Gallery rifles have a triangular loading port on the loading tube that the standard models did not have. A change in the breech bolt mechanism brought about a change in the name designation from Model 62 to Model 62A. This occurred around serial number 98000. The letter "A" now appears behind the serial number. This model stayed in production until 1958, and collectors will concede a premium for guns built prior to WWII with small slide handles. The stock was of plain walnut with straight grip and grooved slide handle. Both the receiver and barrel were blued. All Model 62 and 62As were takedown. Approximately 409,000 guns were sold.

Pre-war Model 62

NOTE: A Model 62 with "*WINCHESTER*" stamped on the side of the receiver is more desirable than one without the stamping. Deduct 10 percent for Gallery rifles without this stamping.

Model 1903

The first semi-automatic rifle produced by Winchester was designed by T.C. Johnson. This rifle was offered in a takedown version only and was available in a 20" round barrel chambered for the .22 Winchester Automatic Rimfire. This ammunition is no longer produced and when found is very expensive. The tubular magazine is located in the buttstock and holds 10 cartridges. The rifle was available in two different configurations:

1. Standard Rifle, 20" round barrel, plain walnut straight-grip stock with plain forend. Steel crescent butt was standard.
2. Deluxe Rifle, 20" round barrel, fancy checkered walnut pistol-grip stock with checkered forearm. Manufactured from 1903 to 1932, about 126,000 were sold.

NOTE: The first 5,000 guns were built without safeties, and the first 15,000 guns were furnished with bronze firing pins instead of steel. These early Model 1903s will bring a premium of 30 percent.

Model 63

The Model 63 took the place of the Model 1903 in 1933 in an attempt by Winchester to solve the problem of having to use a special .22 caliber cartridge in the gun to operate the blowback system. It is a very high quality semi-automatic rifle. Many collectors and shooters considered it the best rimfire semi-automatic rifle ever produced.The Model 63 was chambered for the .22 LR cartridge and was available in a 20" barrel for the first four years or until about serial number 9800. Thereafter, the model was offered with a 23" round barrel for the remainder of the production period. The gun was fitted with a plain walnut pistol-grip stock and forearm. The tubular magazine was located in the buttstock that came with a steel buttplate. The last 10,000 Model 63s were sold with a grooved receiver top to make the addition of a scope easier. Manufactured between 1933 and 1958, about 175,000 guns were sold.

Model 1905

The Model 1905 was a larger version of the Model 1903, developed by T.C. Johnson to handle the more powerful centerfire cartridges. It was chambered for the .32 Winchester Self-Loading and .35 Self-Loading cartridges, loading by means of a detachable box magazine. Available in takedown only, this model was offered in two different styles:

1. Sporting Rifle, 22" round barrel, plain walnut straight grip (changed to pistol grip in 1908) stock with plain forend.
2. Fancy Sporting Rifle, 22" round barrel, fancy walnut checkered pistol-grip stock with checkered forend. This model was the first Winchester semi-automatic rifle to fire centerfire cartridges. Produced from 1905 to 1920 with about 30,000 rifles sold.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Model 1907

The Model 1907 was an improved version of the Model 1905 and chambered for the new .351 Winchester Self-Loading cartridge. Outward appearance was the same as Model 1905 except for 20" round barrel. This rifle was available in three different styles:

1. Sporting Rifle, 20" round barrel, plain walnut pistol-grip stock with plain forend. Discontinued in 1937.
2. Fancy Sporting Rifle, 20" round barrel, fancy walnut checkered pistol-grip stock and checkered forend.
3. Police Rifle, 20" round barrel, plain walnut pistol-grip stock and beavertail forend. This version was fitted with a leather sling and with or without knife bayonet. First introduced in 1937. Winchester discontinued this model in 1957 after having sold about 59,000 guns.

Model 55 (Rimfire Rifle)

Not to be confused with the lever-action model, this .22 caliber rifle was a semi-automatic single-shot with a 22" round barrel. Fitted with a plain walnut pistol-grip one-piece stock and forend. The safety goes on when each cartridge is inserted into the chamber. This model was not serial numbered and was produced from 1957 to 1961 with about 45,000 guns sold.

Standard Rifle

Model 74

This was a semi-automatic chambered for either the .22 Short or the .22 LR. The rifle has a tubular magazine in the buttstock and a 24" round barrel. The bolt on this rifle was designed to be easily removed for cleaning or repair. The stock was plain walnut pistol-grip with semi-beavertail forend. A Gallery Special was offered that was chambered for the .22 Short and fitted with a steel shell deflector. This gallery model was also available with chrome trimmings at extra cost.

Model 77

This rifle was built on the blow-back design for semi-automatic rifles and is chambered for the .22 LR. It features a 22" round barrel and either a detachable box magazine or under barrel tubular magazine. The rifle has a trigger guard made of nylon. It has a plain walnut pistol-grip stock with semi-beavertail forend and composition buttplate. Built between 1955 and 1963, Winchester sold about 217,000 of these rifles.

Standard Rifle

NOTE: Models with tubular magazines will bring a premium of 10 percent to 20 percent.

Model 100

This rifle is a gas operated semi-automatic and chambered for the .243, .308, and .284 caliber cartridges. The Model 100 was the first commercial Winchester self-loading, centerfire rifle made since the Winchester Model 1905, the Model 1907, and the Model 1910. These models were produced until 1936/37. Winchester did produce the M1 Carbine during WWII. It was available in a rifle version with a 22" round barrel and a carbine version with a 19" barrel. Both were furnished with a detachable box magazine. The stock was a one-piece design with pistol grip and was offered in either hand-cut checkering or pressed basket weave checkering. Rifles were introduced in 1960 and the carbine in 1967. The Model 100 was last produced in 1973 with about 263,000 guns sold.

WARNING: THE MODEL 100 WAS RECALLED IN 1990. DO NOT PURCHASE THIS MODEL WITHOUT FIRST DETERMINING IF THE PROBLEM HAS BEEN REPAIRED. CALL WINCHESTER PRODUCT SERVICE FOR INFORMATION.

475	400	300	250	200

NOTE: Pre-1964 models 15 percent premium. Prices given are for .308 caliber; for .243 add 15 percent, for .284 add 20 percent.

Carbine

Only about 53,000 carbines were made, about one for every five rifles.

Exc.	V.G.	Good	Fair	Poor
575	475	375	325	225

NOTE: Add 25 percent premium for .243, and 100 percent for .284.

Model SXR Super X Rifle

Gas-operated semi-automatic patterned after Browning BAR ShortTrac and LongTrac. Calibers: .30-06 (4), .300WM (3), .270 WSM (3), .300 WSM (3). Barrel: 22-inch (.30-06), 24-inch. Weight: 7-1/4 lbs. Stock: Two-piece checkered walnut. Introduced 2006. MSRP: $839.

Model 88 "Centennial Model" (1855/1955)

The Model 88 was a modern short-stroke lever-action chambered for the .243, .308, 284, and .358 calibers. It was available in a rifle version with 22" round barrel and a carbine version with 19" round barrel. The carbine model was not chambered for the .358 cartridge. Both were furnished with a detachable box magazine. The stock was a one-piece design with pistol grip and was offered with hand-cut checkering or pressed basket weave checkering after 1964. The rifle was introduced in 1955 and the carbine was first offered in 1968. Both versions were discontinued in 1973 with about 283,000 sold.

Rifle

1200	1050	900	650	300

NOTE: Add 25 percent for .243, add 100 percent for .284 calibers. The carbine was not offered in .358 caliber.

Model 99 or Thumb Trigger

This rifle was a modification of the Model 1902 without a traditional trigger. The rifle was fired by depressing the trigger with the thumb, which was part of the sear and extractor located behind the bolt. The rifle was chambered for the .22 Short and Long until 1914 when it was also chambered for the .22 Extra Long. All cartridges could be shot interchangeably. The stock was the same as the Model 1902, Gumwood stained walnut, without the trigger or trigger guard. This model was not serial numbered. Built between 1904 and 1923. Winchester sold about 76,000 rifles.

Courtesy Bonhams & Butterfields, San Francisco, California

2000	1000	450	300	200

Model 1902

Also a single-shot, this model was of the same general design as the Model 1900 with several improvements: a special shaped metal trigger guard was added, a shorter trigger pull, a steel buttplate, a rear peep sight, and the barrel was made heavier at the muzzle. The rifle was chambered for the .22 Short and Long cartridges until 1914 when the .22 Extra Long was added. In 1927 the .22 Extra Long was dropped in favor of the more popular .22 LR. All of these cartridges were interchangeable. The stock was a one-piece plain gumwood with straight grip (the metal trigger guard added a pistol grip feel) and steel buttplate, which was changed to composition in 1907. This model was not serial numbered. About 640,000 Model 1902s were sold between 1902 and 1931 when it was discontinued.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1000	750	400	225	125

Model 1904

This model was a slightly more expensive version of the Model 1902. It featured a 21" round barrel, a one-piece plain gumwood straight-grip stock (the metal trigger guard gave the rifle a pistol grip feel) with a small lip on the forend. Rifle was chambered for the .22 Short and Long until 1914 when the .22 Extra Long was added. The .22 LR cartridge was added in place of the Extra Long in 1927. This model was not serial numbered. Produced between 1904 and 1931, about 303,000 rifles were sold.

Model D Military Rifle

Overall length 46-3/8"; barrel length 26"; caliber 7.62mm. Walnut stock with blued barrel, receiver, magazine housing and furniture. Receiver ring over barrel breech stamped with serial number and Winchester proofmark. A total of 500 Model D Rifles were shipped to Russia for trial in March of 1917.

Prospective purchasers are strongly advised to secure an expert appraisal prior to acquisition. Due to the recent identification of this model pricing schedules have yet to be established.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Imperial Bolt-Action Magazine Rifle (Model 51)

Designed by T.C. Johnson, approximately 25 of these rifles were made during 1919 and 1920 in two different styles and three calibers. The takedown variation has an overall length of 42-1/4", barrel length 22" and was made in .27, .30-06 and .35 Newton calibers. The solid frame version is identical in form, dimensions and calibers. Sight configurations and markings vary.

Winchester Imperial Takedown

Winchester Imperial Solid Frame

Model 43

Introduced in 1949, this rifle was chambered for the .218 Bee, .22 Hornet, .25-20 Winchester, and the .32-20 Winchester. The rifle was a bolt-action with detachable box magazine, fitted with a 24" round barrel and front sight ramp forged integrally with barrel. **This model was not drilled and tapped for scope blocks except for a few late rifles.**This model was available in two styles:

1. Standard Rifle, 24" round barrel, plain walnut pistol-grip stock and forend. One inch sling swivels are standard.
2. Special Rifle, 24" round barrel, select walnut checkered pistol-grip stock and checkered forend. Furnished with either open sporting rear sight or Lyman 57A micrometer receiver sight.

The Model 43 was produced from 1949 to 1957 with about 63,000 sold.

NOTE: Add 10 percent premium for Model 47 with factory peep sight.

Model 52

Editor's Comment: According to Winchester factory records, Model 52 barrels were, "originally drilled and tapped for Winchester telescope bases designed for use with the Winchester 3A, 5A, and Lyman telescopes." These bases had a 6.2" center-to-center spacing ... a change in the bases and the spacing to be used was authorized on January 11, 1933. These new bases had a specially shaped Fecker-type notch added on the right-hand side of both bases. They are known as Winchester Combination Telescope Sight Bases and are satisfactory for use with Winchester, Lyman, Fecker, and Unertl telescopes. Bases are spaced 7.2" center to center ... All Model 52 targets were factory drilled for scope mounting but only the "C" series Sporters were factory drilled for scopes.

One of the finest small-caliber bolt-action rifles ever built, the Model 52 was Winchester's answer to the increased demand for a military-style target rifle following WWI. The Model 52 was a well-made quality-built bolt-action rifle. The rifle was chambered for the .22 LR cartridge. Designed by T.C. Johnson, this rifle was built in several different configurations over its production life:

1. Model 52 with finger groove in forend and one barrel band. Produced from 1920 to 1929.
2. Model 52 Target Rifle, same as above but without finger groove in forend and has first speed lock. Made from 1929 to 1932.
3. Model 52A Target Rifle, same as above with addition of reinforced receiver and locking lug. Made from 1932 to 1935.
4. Model 52B Target Rifle, same as above with addition of adjustable sling swivel and single-shot adaptor. Made from 1935 to 1947.
5. Model 52C Target Rifle, same as above with addition of an easily adjustable vibration-free trigger mechanism. Made from 1947 to 1961.
6. Model 52D Target Rifle, this is a single-shot rifle with free-floating barrel and new design stock with adjustable hand-stop channel.
7. Model 52 Bull Gun, same as target rifle but fitted with extra heavyweight barrel. Made from 1939 to 1960. The Bull Barrel measures 1.125" at the receiver juncture while the heavyweight measures 1". Both barrels measure .875" at the muzzle.
8. Model 52 International Match, a free-style stock with thumb hole and adjustable buttstock and forend introduced in 1969. International Prone model with no thumb hole or adjustable buttplate and forend was introduced in 1975. Both discontinued in 1980.
9. Model 52 Sporter, 24" round barrel, select walnut checkered pistol-grip stock with cheekpiece and forend with black plastic tip. Pistol grip was furnished with hard-rubber grip cap. The Model 52 Sporter was introduced in 1934 and discontinued in 1958. It went through the same improvements as the Target Rifle, thus the designation Model 52A Sporter, etc.

Model 54

The Model 54 was to centerfire cartridges what the Model 52 was to rimfire cartridges. The Model 54 was also a quality-made bolt-action rifle with a nondetachable box magazine and was chambered for a variety of calibers: .270, .30-06, .30-30, 7mm, 7.65, 9.mm, .250-3000, .22 Hornet, .220 Swift, and .257 Roberts. This was Winchester's first bolt-action rifle built for heavy, high velocity ammunition. The rifle was available in several different styles:

1. Standard Rifle, 24" or 20" round barrel (except .220 Swift which was 26"), plain walnut checkered pistol-grip stock and forend.
2. Carbine, 20" round barrel, plain walnut pistol-grip stock with finger groove on each side of forend.
3. Sniper's Rifle, 26" round heavyweight barrel, plain walnut pistol-grip stock and forend.
4. N.R.A. Rifle, 24" round barrel, select walnut checkered pistol-grip stock and forend.
5. Super Grade Rifle, 24" round barrel, select walnut checkered pistol-grip stock with cheekpiece and checkered forend with black plastic tip. Pistol grip was capped with hard rubber cap. Super Grade was equipped with 1" detachable sling swivels.
6. Target Rifle, 24" round heavyweight barrel, plain walnut checkered pistol-grip stock and forend.
7. National Match Rifle, 24" round barrel, plain walnut special target stock and forend.

The Model 54 was introduced in 1925 and was discontinued in 1936 with about 50,000 guns sold.

National Match Rifle

Exc.	V.G.	Good	Fair	Poor
900	750	600	450	375

NOTE: The rare calibers are the 7mm, 7.65mm and the 9mm, which bring considerable premiums (in some cases as much as 250 percent) over standard calibers. Popular calibers such as .22 Hornet, .220 Swift, .30-30, and .257 Roberts will also bring a premium. Proceed with caution on Model 54s with rare caliber markings.

Model 56

This model was designed to be a medium-priced bolt-action rimfire rifle. It featured a detachable box magazine and was chambered for the .22 Short or .22 LR cartridges. The rifle was offered in two styles:

1. Sporting Rifle, 22" round barrel, plain walnut pistol-grip stock and forend.
2. Fancy Sporting Rifle, 22" round barrel, fancy walnut checkered pistol-grip stock and forend.

Both styles had a forend with a distinctive lip on the forend tip. The rifle was introduced in 1926 and was discontinued in 1929 with about 8,500 rifles sold.

Sporting Rifle

1500	1000	750	525	400

Fancy Sporting Rifle

Very rare, use caution.

Exc.	V.G.	Good	Fair	Poor
3000	2000	1500	900	750

NOTE: Add a 50 percent premium for rifles chambered for .22 Short only.

Model 57

The Model 57 was close in appearance to the Model 56 with the addition of a heavier stock, target sights, and swivel bows attached to the stock. The rifle was chambered for the .22 Short or .22 LR and featured a 22" round barrel with detachable box magazine. The stock was plain walnut with pistol grip and plain forend. The rifle was introduced in 1927 and dropped from the Winchester line in 1936 having sold only about 19,000 guns.

Exc.	V.G.	Good	Fair	Poor
750	600	450	325	250

NOTE: Add 20 percent premium for web sling.

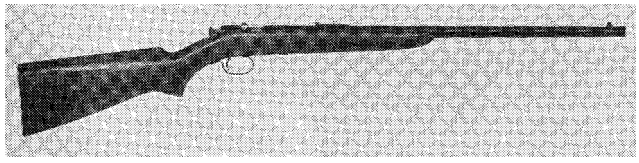
Model 58

This model was an attempt by the company to market a low-priced .22 caliber rimfire rifle in place of its Models 1902 and 1904. This was a single-shot bolt-action, cocked by pulling the firing pin head to the rear. It had an 18" round barrel and was chambered for the .22 Short, Long, and LR interchangeably. The stock was a one-piece plain wood with straight grip. This model was not serial-numbered. The Model 58 was introduced in 1928 and discontinued in 1931. About 39,000 were sold.

Exc.	V.G.	Good	Fair	Poor
2000	1000	425	250	125

Model 59

The Model 59 was essentially a Model 58 with the addition of a pistol-grip stock and a 23" round barrel. Introduced in 1930, it was dropped from the product line in the same year with a total sales of about 9,000 guns.



Courtesy Olin Corporation

Exc.	V.G.	Good	Fair	Poor
2000	1000	400	200	125

Model 60 and 60A

This rifle used the same action as that of the Model 59. When the rifle was first introduced in 1931, it was furnished with a 23" round barrel which was changed to 27" in 1933. Several other mechanical improvements were included with this model; perhaps the most noticeable were the chrome-plated bolt, bolt handle, and trigger. The stock was plain wood with pistol grip. In 1933 the Model 60A was added, which was the same rifle but in a target configuration. The front sight was a square top military blade with a Lyman 55W receiver sight. The Model 60 was discontinued in 1934 with about 166,000 rifles sold. The Model 60A was dropped in 1939 with only about 6,100 rifles sold.

400	300	250	150	100

Model 67

Winchester again upgraded and improved the Model 60 with an expansion of the styles offered to the shooting public. The standard chamber for the rifle was .22 Short, Long, and LR interchangeably with the W.R.F. only added in 1935:

1. Sporting Rifle, 27" round barrel, stock similar to the Model 60.
2. Smoothbore Rifle, 27" barrel, chambered for the .22 long shot or .22 LR shot.
3. Junior Rifle, 20" round barrel and shorter stock.
4. Rifle with miniature target boring, 24" round barrel, chambered for .22 LR shot.

Model 67s were not serial numbered for domestic sales but were numbered for foreign sales. Introduced in 1934 the gun was dropped from the line in 1963 having sold about 384,000. Many of these models were fitted at the factory with telescopes, and the bases were mounted on the rifle and the scope was packed separately.

NOTE: Rifles with factory scopes and no sights add 50 percent. For rifles with factory scopes and no sights chambered for .22 WRF add 200 percent.

Model 69 and 69A

This model was designed by Winchester to answer the demand for a medium-priced hunting and target .22 rimfire bolt-action rifle. The rifle had a detachable box magazine, and many were offered with factory-installed telescopes in 2-3/4 and 5 power. The stock was plain walnut with pistol grip and plain forend. This model was not serial numbered. The 69A version was introduced in 1937 and featured an improved cocking mechanism. Introduced in 1935 as the Model 69, this gun was dropped in 1963 with sales of about 355,000 guns.

450	375	300	200	100

NOTE: Add 25 percent for Target Model. Add 20 percent for grooved receiver.

Model 697

The Model 697 was similar in appearance to the Model 69 except it was equipped exclusively for a telescope. Winchester offered either a 2-3/4 or 5-power scope with the bases attached at the factory and the scope packed separately. Built between 1937 and 1941 with small sales, this model was not serial numbered.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
2000	1200	800	600	400

NOTE: For factory scopes with no sights add 50 percent.

Model 70

Considered by many as the finest bolt-action rifle ever built in the United States, the pre-1964 Model 70 is highly sought after by shooters and collectors alike. Its smooth, strong action has no peer. It is often referred to as "The Riflemen's Rifle." The Model 70 is an updated and improved version of the Model 54 and features a hinged floorplate, new speed locks, new safety design that does not interfere with telescope, manually releasable bolt stop, more attractive buttstock and forend, and forged steel trigger guard. Like many Winchesters, the Model 70 was available with several extra-cost options that should be evaluated by an expert. The values listed are given for pre-1964 Model 70s with serial numbers from 1 to 581471. This rifle was available in several different styles:

1. Standard Grade, 24" round barrel (except 26" round barrel for .220 Swift and .300 H&H Magnum—25" round barrel for .375 H&H Magnum after 1937), plain walnut checkered pistol stock and forend. Built from 1936 to 1963.
2. Standard Grade Carbine, 20" round barrel, chambered for .22 Hornet, .250-3000, .257 Roberts, .270, 7mm, and .30-06, same stock as Standard Grade. Built from 1936 to 1946.
3. Super Grade Rifle, same barrel and calibers as Standard Grade, select walnut checkered and capped pistol-grip stock with cheekpiece and checkered forend with plastic tip. Built from 1936 to 1960.
4. Featherweight, 22" round barrel chambered for .243, .264, .270, .308, .30-06, and .358. Fitted with aluminum trigger guard, aluminum buttplate, and aluminum floor plate. Later versions with plastic buttplate. Built from 1952 to 1963.
5. Featherweight Super Grade, same as above except not chambered for the .358 cartridge, but fitted with Super Grade stock. Built from 1952 to 1963.
6 National Match, same as Standard Grade but fitted with target type stock and telescope bases. Chambered for .30-06 only. Discontinued in 1960.

7. Target, 24" round medium-weight barrel with same stock as National Match in .243 and .30-06 calibers. Discontinued in 1963.
8. Varmint, 26" round heavy barrel, with heavier varmint stock, chambered for .243 and the rare .220 Swift. Built from 1956 to 1963.
9. Westerner, 26" round barrel with Standard Grade stock, chambered for .264 Winchester Magnum. Built from 1960 to 1963. Fitted with a solid rubber pad for early production guns and a vented pad for later guns.
10. Alaskan, 25" round barrel, with Standard Grade stock, chambered for .338 Winchester Magnum and .375 H&H Magnum. Built from 1960 to 1963. Fitted with a solid rubber pad marked Winchester for early production guns and a vented pad both marked Winchester for later guns.
11. Bull Gun, 28" round barrel, same stock as National Match, chambered for .30-06 and .300 H&H Magnum. Built from 1936 to 1963.

The standard calibers offered for the Model 70 are these, in order of rarity: .300 Savage, .35 Rem., .458 Win Magnum, 7mm, .358 Win., .250-3000 Savage, .300 Win Magnum, .338 Win. Magnum, .375 H&H Magnum, .257 Roberts, .220 Swift, .22 Hornet, .264 Win. Magnum, .300 H&H Magnum, .308 Win., .243 Win., .270 W.C.F., .30-06.

NOTE: Prices for the Model 70 are, in many cases, based on the caliber of the rifle; the more rare the caliber, the more premium the gun will command. Many pre-1964 Model 70s are still available in new condition in the original box with all papers. Add 100 percent if the box is serial numbered to the gun. **Use caution** prior to purchase of NIB guns due to fake boxes and papers.

PRICING NOTE: The asterisk **(*)** signifies the value of the rifle with respect to a usable action. Model 70 unaltered receivers bring $500 regardless of the condition of the barrel and stock. If the receiver is unusable then the rifle is worth the value of its usable parts, i.e. less than $500.

For Model 70s with "X" or "D" prefex add a collector premium of 10 percent. These letters indicate that there were two rifles mistakenly stamped with the same serial number.

VALUE TRACKER: WINCHESTER PRE-1964 MODEL 70 RIFLES

Introduced in 1935, the Mauser-inspired Winchester Model 70 quickly built a reputation as the most versatile American sporting rifle ever designed. Model 70 aficionados are pointedly aware of the "pre-'64/post-'64" divide, and it is safe to say that no post-'64 Model 70 has ever approached the value of a pre-'64 example in comparable condition. In 2006, the Model 70 disappeared from the Winchester catalog but returned in 2008. As far as we have been able to determine, the discontinuance of the M70 in 2006 did not result in an immediate value spike for post-'64 examples, as was seen in the case of the late, lamented Model 94 lever action.

Model 72

This model is a bolt-action rifle with tubular magazine. It is chambered for the .22 Short, Long, and LR cartridges interchangeably. Early rifles were available with 2-3/4 or 5 power telescopes, but the majority were furnished with either open sights or peep sights. This rifle was available in two different configurations:

1. Sporting Rifle, 25" round barrel, chambered for the .22 Short, Long, and LR cartridges, one-piece plain walnut pistol-grip stock and forend.
2. Gallery Special, 25" round barrel, chambered for .22 Short only, stock same as Sporting Rifle.

This model was not serial numbered. It was built between 1938 and 1959 with about 161,000 rifles sold.

Courtesy C.H. Wolfersberger

Exc.	V.G.	Good	Fair	Poor
425	350	275	200	125

NOTE: Gallery Special will command a premium of 100 percent. For rifles with factory scopes and no sights add 200 percent depending on condition. Add 25 percent premium for peep sights. Add 20 percent for Model 72A with grooved receiver.

Model 75

Available in two styles:

1. Sporting Rifle, 24" round barrel, chambered for .22 LR, select walnut checkered pistol-grip stock and forend. This rifle was furnished with either open rear sights or a Lyman 57 E receiver sight.
2. Target Rifle, 28" round barrel, chambered for .22 LR, plain walnut pistol-grip stock and forend. The Target Rifle was furnished with either a Winchester 8-power telescope or a variety of target sights.

This model was discontinued in 1958 with about 89,000 sold.

Model 12

This model was designed by T.C. Johnson and was the first slide-action hammerless shotgun built by Winchester. The Model 12 has enjoyed great success in its 51-year history, and over 1,900,000 were sold. This was a high quality, well-made shotgun that is still in use in the hunting and shooting fields across the country. All Model 12s were of the takedown variety. The Model 12 was dropped from regular product line in 1963, but a special model was produced in the Custom Shop until 1979. In 1972 Winchester resurrected the Model 12 in its regular production line in 12 gauge only and ventilated rib. This reintroduced Model 12 was dropped in 1980. The prices listed are for guns made prior to 1964 or for guns with serial numbers below 1968307. This shotgun was offered in several different styles:

1. Standard Grade, 12, 16, 20, and 28 gauge, with plain, solid rib, or vent rib round barrels of standard lengths (26", 28", 30", 32"), plain walnut pistol-grip stock with grooved slide handle. Built from 1912 to 1963.
2. Featherweight, same as above with lightweight alloy trigger guard. Built between 1959 and 1962.
3. Riot Gun, in 12 gauge only with 20" round choked cylinder, stock same as Standard Grade. Built between 1918 and 1963.
4. Trench Gun, chambered for 12 gauge only with 20" round barrel with ventilated hand guard over barrel, fitted with bayonet lug. All metal surfaces are "Parkerized," and these shotguns should be U.S. marked as a military firearm. Introduced in 1918 and built for U.S. Armed Forces on special order.
5. Skeet Grade, chambered for 12, 16, 20, and 28 gauge with 26" round barrel with solid or ventilated rib, select walnut checkered pistol stock and special checkered extension slide handle (longer than standard). Built from 1933 to 1963.
6. Trap Grade, chambered for 12 gauge only with 30" round barrel with solid rib or ventilated rib, select walnut pistol or straight-grip stock, checkered extension slide handle. Built from 1914 to 1963.
7. Heavy Duck Gun, chambered in 12 gauge only with 30" or 32" round barrel with plain, solid, or ventilated rib, plain walnut pistol-grip stock fitted with Winchester solid red rubber recoil pad, plain grooved slide handle. Built from 1935 to 1963.
8. Pigeon Grade, chambered for 12, 16, 20, and 28 gauges with standard barrel lengths and choice of ribs. This was a special order shotgun and will be seen in many different variations, most of these guns were factory engraved. Built 1914 to 1963.

The Model 12 shotgun will be seen in many different combinations of gauges, barrel lengths, ribs, and stocks, all of which determine value. The more rare a particular combination, the higher the price. The buyer is urged to be extremely cautious before purchasing the more rare combinations, such as a 28 gauge. The best advice is to seek assistance from an expert and get as many opinions as possible. The prices listed are for guns in standard configurations.

For guns with Winchester Special ventilated rib add 30 percent. For guns with milled rib add 40 percent. Add 20 percent for 32" barrels on any Model 12 model. Add 30 percent premium for original box and papers.

Model 25

This model is similar in appearance to the Model 12 but does not have the takedown feature. All guns were solid frame. The Model 25 was furnished in 12 gauge with 26" or 28" plain round barrel, plain walnut pistol-grip stock with grooved slide handle. This was an attempt by Winchester to introduce a less expensive version of the Model 12. Introduced in 1949 it was dropped from the product line in 1954 having sold about 88,000 guns.

400	250	200	150	100

Model 20

In order to utilize the expanded production facilities left over from WWI, Winchester introduced a series of three different models of single-shot shotguns; the Model 20 was the first of the three. This model has a visible hammer and a top lever frame. It was the first Winchester to have this type of breakdown action. It was chambered for the .410, 2-1/2" shell. The barrel is 26" round choked full, plain walnut pistol-grip stock with hard rubber buttplate. The forend has a small lip on the front end. The Model 20 was dropped from the product line in 1924 having sold about 24,000 guns.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
700	500	350	200	150

Model 36

The Model 36 was the second of the single-shot shotguns to be introduced in 1920. This model features a bolt-action that is cocked by pulling the firing pin head to the rear. It is fitted with an 18" round barrel, chambered for the 9mm Long Shot, 9mm Short Shot, and 9mm Ball interchangeably, plain gumwood straight-grip stock with special metal pistol grip trigger guard. Winchester referred to this model as the "Garden Gun" for use against birds and pests around the house and barn. This model was not serial numbered. It was dropped from the product line in 1927 having sold about 20,000 guns.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
750	475	375	300	225

Model 41

This was the third of the low-priced single-shot shotguns to be announced in 1920. Like the Model 36, the Model 41 was a bolt-action arrangement but of much stronger construction and design. It features a 24" round barrel, chambered for the .410 2-1/2" shell, plain walnut pistol-grip stock and forend. Straight-grip stock was furnished at no extra charge. This model was not serial numbered. It was discontinued in 1934 having sold about 22,000 guns.

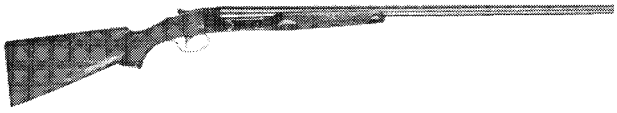
Model 21

The Model 21 was Winchester's finest effort with regard to quality, reliability, and strength. Developed in the late 1920s the introduction of this fine side-by-side shotgun was delayed by the company's financial troubles. When Winchester was purchased by the Olin family, the Model 21 was assured the attention it richly deserved due to John M. Olin's love for the gun. Despite the Model 21 being offered as a production gun it was, in fact, a hand-built custom-made shotgun. Almost each Model 21 built has a personality of its own because each shotgun is slightly different with regard to chokes, barrel lengths, stock dimensions, and embellishments. The gun was introduced in 1931. From 1931 to 1959 the Model 21 was considered a production line gun and about 30,000 were sold. In 1960, when the Custom Shop was opened, the Model 21 was built there using the same procedures. Sales during the Custom Shop era were about 1,000 guns. Winchester changed the name of some of the Model 21 styles but the production methods stayed the same. In 1981 Winchester sold its firearms division to U.S. Repeating Arms Company including the right to build the Model 21. Again the production procedures stayed the same as did many of the former employees. U.S. Repeating Arms expanded and changed some of the style designations for the Model 21. Production was discontinued in about 1991. No sales figures are available for this time period. Collectors and shooters will be given the price breakdown for all three eras of production separately.

NOTE: Fewer than 50 .410 Model 21s were built between 1931 and 1959 in all grades. The number of 28 gauge Model 21s built is unknown but the number is probably no greater than the .410 bore.

Editor's Comment: There were eight 28 gauge Model 21s built during this period and five .410 bores built. These guns obviously command a large premium. Factory letters are available on these guns.



Model 21—1931 to 1959

The Model 21 was available in several different styles and configurations:

1. Standard Grade, chambered in 12, 16, and 20 gauge with barrel length from 26", 28", 30", and 32" with matted rib or ventilated rib, select walnut checkered pistol- or straight-grip stock with checkered beavertail forend. Built from 1931 to 1959.
2. Tournament Grade, same as above with special dimension stock. Marked "TOURNAMENT" on bottom of trigger plate. Built from 1933 to 1934.
3. Trap Grade, same as above with slightly better-grade wood and stock made to customers' dimensions. Marked "TRAP" on trigger plate. Built from 1932 to 1959.
4. Skeet Grade, same as above with the addition of the 28 gauge, stock furnished with checkered butt. Marked "SKEET" on trigger plate. Built from 1936 to 1959.
5. Duck Gun, chambered for 12 gauge 3" magnum shells, 30" or 32" barrels, Standard Grade stock except for shorter length of pull. Marked "DUCK" on trigger plate. Built from 1940 to 1952.
6. Magnum Gun, chambered for 3" 12 or 20 gauge, same stock as Duck Gun. Not marked on trigger plate. Built from 1953 to 1959.
7. Custom Built/Deluxe Grade, chambered for 12, 16, 20, 28, and .410, barrel lengths from 26" to 32", stock built to customer's specifications using fancy walnut. Marked "CUSTOM BUILT" on top of rib or "DELUXE" on trigger

plate. These grades are frequently but not always engraved. Built from 1933 to 1959.

NOTE: Some early Model 21s were furnished with double triggers, extractors, and splinter forends. This combination reduces the price of the gun regardless of grade. Deduct about 25 percent.

Tournament Grade

	Exc.	V.G.	Good	Fair	Poor
12 gauge	5500	4700	3900	3500	3300
16 gauge	7500	6700	5800	5000	4500
20 gauge	7700	6900	6000	5400	4800

Trap Grade

	Exc.	V.G.	Good	Fair	Poor
12 gauge	5800	4800	4000	3800	3600
16 gauge	7500	6800	5900	5300	4900
20 gauge	7700	7000	6300	5800	5300

Skeet Grade

	Exc.	V.G.	Good	Fair	Poor
12 gauge	5500	4500	3700	3400	3200
16 gauge	6900	5800	5200	4900	4400
20 gauge	6900	5900	5200	4800	4200

Duck/Magnum Gun

Exc.	V.G.	Good	Fair	Poor
5600	4600	4200	4000	3800

NOTE: Add 30 percent for 20 gauge Magnum. Factory ventilated ribs command a premium of about $1,800 on 12 gauge guns and $2,500 on 20 and 16 gauge guns. Models 21s with factory furnished extra barrels will bring an additional premium of about $2,500. Refinished and restored Model 21s are in a somewhat unique category of American-made collectible shotguns. A gun that has been professionally refinished by a master craftsman will approximate 90 percent of the value of factory original guns.

Custom Built/Deluxe Grade

The prices paid for guns of this grade are determined by gauge, barrel and choke combinations, rib type, stock specifications, and engraving. Expert appraisal is recommended.

	Exc.	V.G.	Good	Fair	Poor
12 gauge	7000	6500	5500	4500	4000
16 gauge	8000	7500	6500	5500	4500
20 gauge	8500	8000	7000	6000	5000

It is best to secure a factory letter from the Cody Firearms Museum. With respect to such letter, it is important to note that these records are incomplete and may be inaccurate in a few cases. Records for Model 21s built during the 1930s may be missing. Special-order guns may have incomplete records. In such cases, a written appraisal from an authoritative collector or dealer may be helpful.

Custom Built .410 Bore

Exc.	V.G.	Good	Fair	Poor
45000	35000	30000	26000	22000

Custom Shop Model 21s—1960 to 1981

When Winchester moved the production of the Model 21 into the Custom Shop, the number of styles was greatly reduced. There were now three distinct styles:

1. Custom Grade, chambered in 12, 16, 20, 28 gauge, and .410 bore in barrel lengths from 26" to 32". Matted rib, fancy walnut checkered pistol- or straight-grip stock with checkered forend. Guns with pistol grips furnished with steel grip cap. A small amount of scroll engraving was provided on the frame of this grade.
2. Pigeon Grade, same chambers and barrel lengths as above with the addition of choice of matted or ventilated rib, leather-covered recoil pad, style "A" carving on stock and forend, and gold engraved pistol grip cap. The frame was engraved with the 21-6 engraving pattern.
3. Grand American Grade, same chambers and barrel lengths as Pigeon Grade with the addition of "B" carving on the stock and forend, 21-6 engraving with gold inlays, extra set of interchangeable barrels with extra forend. All of this was enclosed in a leather trunk case.

Custom Grade—12 Gauge

Exc.	V.G.	Good	Fair	Poor
9800	7500	6800	6000	5200

NOTE: Add $4,000 for 16 gauge. Add $5,000 for 20 gauge.

Pigeon Grade—12 Gauge

Exc.	V.G.	Good	Fair	Poor
18000	15000	12000	10000	8000

NOTE: Add $6,000 for 16 gauge. Add $5,000 for 20 gauge.

Grand American—12 Gauge

Exc.	V.G.	Good	Fair	Poor
26000	20000	16000	14000	13000

NOTE: Add $15,000 for 16 gauge (extremely rare). Add $5,000 for 20 gauge.

ENGRAVED MODEL 21S

Winchester catalogued a number of special-order engraving patterns which ranged from a small amount of scroll (#1) to full-coverage game scene and scroll (#6). In addition, there were a few guns engraved on special order to the customer's request. Engraved guns are extremely rare, and the value added will vary with the rarity of the gauge and the date of manufacture. The following table represents the value added for various standard engraving patterns on 12 gauge guns for the "Custom Shop" (1960-1982) and "Pre-Custom Shop" (1932-1959) periods. However, it is advisable to seek the opinion of an authorative collector or dealer prior to a sale.

Engraving Pattern	Pre-Custom Shop	Custom Shop
#1	30 percent	20 percent
#2	40 percent	30 percent
#3	60 percent	45 percent
#4	70 percent	50 percent
#5	90 percent	70 percent
#6	100 percent	80 percent

Custom Shop Model 21s—1982 to Present

When U.S. Repeating Arms Company took over the production of the Model 21, the Pigeon Grade was dropped from the line. The Grand American Grade was retained with all the features of its predecessor but with the addition of a small-bore set featuring a 28 gauge and .410 bore set of barrels. Two new grades were introduced in 1983: the Standard Custom Grade and the Special Custom Built. In addition to these grades, the factory would undertake to build for its customers whatever was desired. Due to the unique nature of these guns, it is advised that an expert appraisal be sought to establish a value. While the changeover from Winchester to U.S. Repeating Arms was a transfer of business assets and the craftsmen and personnel remained the same, collectors are reluctant to assign the same values to U.S. Repeating Arms Model 21s as those produced by Winchester. No official production figures are available for U.S.R.A. Model 21s, but the number is most likely small; perhaps around 200 guns.

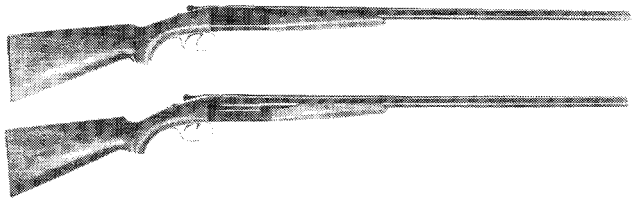
60000	45000	35000	27000	22000	20000

Model 24

The Model 24 was Winchester's attempt to develop a medium-priced double-barrel shotgun. Like the Model 21, it was a top lever breakdown model that was available in 12, 16, and 20 gauge in various barrel lengths from 26" to 30". Offered in a Standard model only with double triggers, raised matted rib, plain walnut pistol- or straight-grip stock with semi-beavertail forend, the Model 24 was introduced in 1939 and was discontinued in 1957 with about 116,000 guns sold.



Top: Model 24 Standard; bottom: Model 24 Improved

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
650	500	400	250	200

NOTE: Add 10 percent for 16 gauge. Add 25 percent for 20 gauge.

Model 37

This model was developed to keep pace with Winchester's competitors in the low-price single-barrel exposed-hammer shotgun market. The shotgun was available in 12, 16, 20, 28 gauge, and .410 bore with barrel lengths from 26" to 30". The stock was plain walnut with pistol grip and semi-beavertail forend. This model was not serial numbered. Introduced in 1936 it stayed in the company line until 1963, having sold slightly over 1,000,000 guns.

NOTE: Do not confuse this model with the Model 37A.

	Exc.	*V.G.*	*Good*	*Fair*	*Poor*
20 gauge	550	450	350	250	125

NOTE: For 12 and 16 gauge guns add a 50 percent premium for 32" barrels. Use caution for 28 gauge guns. Many fakes are seen for sale.

Model 42

This was the first slide-action shotgun ever developed exclusively for the .410 bore. Invented by William Roemer, the Model 42 was in effect, at least in outward appearance, a miniature Model 12. This shotgun was a quality-built, fast-handling, racy looking shotgun that many refer to as "Everybody's Sweetheart." The Model 42 was the first American .410 bore chambered for the new 3" shell as well as the 2.5" shell. The Model 42 was offered in several different configurations throughout its production. These configurations will greatly influence value:

1. Standard Grade, 26" or 28" plain or solid rib barrel, plain walnut pistol-grip stock with grooved slide handle, fitted with composition buttplate. A straight grip was offered on the Standard Grade on a special order basis, but it is extremely rare. Built from 1933 to 1963.
2. Skeet Grade, 26" or 28" plain, solid rib, or ventilated rib barrel, select walnut checkered pistol or straight-grip stock with checkered extension slide handle. The Skeet Grade was offered in Full, Modified, Improved Cylinder, Cylinder as well as Skeet chokes. Built from 1933 to 1963.
3. Trap Grade, 26" or 28" plain or solid rib barrel, fancy walnut special checkered pistol or straight-grip stock with special checkered extension slide handle. The Trap Grade checkering pattern has one closed diamond on each side of the pistol grip or, in the case of the straight grip, the diamond is located on the underside of the grip. The extension slide handle has two uncut diamonds on each side. Most were stamped "TRAP" on the bottom of the receiver under the serial number. Built from 1934 to 1939.
4. Deluxe Grade, a continuation of the Trap Grade, available with ventilated rib in 1954. Some early models stamped "DELUXE" on bottom of receiver. This stamping is seldom seen and was probably discontinued around 1949. Built from 1940 to 1963.
5. Pigeon Grade, same as above Deluxe Grade but engraved with a pigeon on the lower magazine tube. Very few of this grade were built by Winchester, and the majority were done in the late 1940s. Authentic Pigeon Grade 42s appear to have been built between 1945 and 1949. Some estimate that less than 50 were produced. this is a rare Model 42. Seek an expert opinion before a sale.

NOTE: Engraved Model 42s will occasionally be seen. Collectors are urged to seek expert advice on these rare and expensive guns. The Model 42 was produced from 1933 to 1963. About 164,000 were sold. Factory service and repair for this model were discontinued in February of 1972.

Extra Barrels: Winchester offered extra interchangeable barrels for its Model 42s at the customer's request beginning in 1934. These extra sets of barrels are a rare option. Both barrels should have the same barrel markings and matching serial numbers before originality can be considered. Values are difficult to determine, but as a general rule add 60 percent to the price of a Model 42 if it has a factory-original extra barrel.

Editor's Comment: Contrary to traditional views, Winchester did install factory ventilated ribs on its Model 42. Former employees and factory drawings substantiate this fact. However, the subject of what is a factory rib and what is not has been covered in great detail in an excellent book on the Model 42. Seek expert advice before selling or purchasing any Model 42 with a ventilated rib.

Standard Grade

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
2500	1850	100	850	650	350

NOTE: For Standard Grade guns with solid ribs add 50 percent. For pre-war guns add 30 percent.

Skeet Grade—Solid Rib

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
6500	4000	3500	2400	1650	950

NOTE: Add 25 percent guns chambered for 2-1/2" shells. For pre-war guns add 30 percent. For Skeet Grade guns with no rib deduct 25 percent.

Skeet Grade—Ventilated Rib

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
7000	5250	3850	3000	2200	1250

NOTE: Add 25 percent of guns chambered for 2-1/2" shells.

Trap Grade - Available in Plain or Solid Rib

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
10000	8750	8250	5500	3000

Deluxe Grade—Solid Rib

Exc.	V.G.	Good	Fair	Poor
8500	7000	5750	3500	1250

Deluxe Grade—Ventilated Rib

Exc.	V.G.	Good	Fair	Poor
10000	8250	7000	4750	2200

NOTE: For Pigeon Grade Model 42s with documentation on expert authentication add 100 percent.

Cutts Compensator Guns: Approximately 66 original Cutts Compensator guns were produced in the factory, making this one of the rarest options on the Model 42. These original guns will have ***no choke markings***, and were only offered with a vent rib. Add 25 percent for original Cutts guns, deduct 50 percent for non-original Cutts guns.

Model 1911

This was Winchester's first self-loading shotgun and was developed by T.C. Johnson in order to keep pace with the Remington Auto-Loading Shotgun Model 11, which was developed by John M. Browning with help from T.C. Johnson. Because of the delays involved in developing a brand new design, the Model 1911 was introduced on October 7, 1911. The shotgun was a recoil operated mechanism, had a tubular magazine and had the takedown feature. The shotgun was available in two styles:

1. Plain Model 1911, 26" or 28" barrel, 12 gauge, choked full, modified, or cylinder, plain birch laminated pistol-grip stock and forend with hard rubber buttplate.
2. Fancy Model 1911, same as above with fancy birch laminated stock.

Because of the hurry in getting the model ready for production, the shotgun demonstrated design weakness and never proved satisfactory. It was discontinued in 1925 with about 83,000 guns sold.

Model 1911—Plain

Model 1911—Fancy

Exc.	V.G.	Good	Fair	Poor
800	500	400	300	250

Model 40

This model represents Winchester's second attempt to build a self-loading long recoil-operated repeating shotgun. This shotgun was a hammerless tubular magazine gun without the hump at the rear of the receiver. Available in 12 gauge only with barrel lengths from 28" to 30". The Standard Grade had plain walnut pistol-grip stock and forend. The Skeet Grade was fitted with select walnut checkered pistol-grip stock and checkered forend. The Model 40 suffered from the same design problems as the Model 11, and sales were small. Introduced in 1940 and discontinued in 1941, Winchester sold about 12,000 guns.

800	600	500	300	250

Model 50

The Model 50 was the company's third attempt to produce a satisfactory self-loading repeating shotgun. Winchester went to the short recoil system, utilizing a floating chamber design. This model was available in several different styles:

1. Standard Grade, 12 or 20 gauge with plain or ventilated rib in lengths from 26" to 30", plain walnut checkered pistol-grip stock and forend.
2. Skeet Grade, 12 or 20 gauge with 26" ventilated rib barrel. Walnut checkered pistol-grip stock and forend.
3. Trap Grade, 12 gauge with 30" ventilated rib barrel, walnut checkered Monte Carlo stock and forend.
4. Pigeon Grade, 12 or 20 gauge with barrel lengths to customers' specifications. Fancy walnut checkered stock and forend. Made on special orders only.
5. Featherweight, a lighter version of all the above except Trap Grade.

This model begins with serial number 1000. This model was successful and was built between 1954 and 1961. Winchester sold about 200,000 guns.

500	400	325	225	150

NOTE: Add 10 percent for 20 gauge. Add 20 percent for vent rib on standard grade guns.

Model 59

The fourth and final pre-1964 Winchester self-loading shotgun featured a steel and fiberglass barrel with aluminum alloy receiver. The gun was available in 12 gauge only with barrel lengths from 26" to 30" with a variety of chokes. In 1961 Winchester introduced the "Versalite" choke tube, which gave the shooter a choice of Full, Modified, or Improved Cylinder chokes in the same barrel. This model was available in two different styles:

1. Standard Grade, plain walnut checkered pistol-grip stock and forend.
2. Pigeon Grade, select walnut checkered pistol-grip and forend.

Winchester sold about 82,000 of these guns between 1960 and 1965.

NOTE: This shotgun was also made in 10 gauge (very rare), 20 gauge, and 14 gauge. If any of these very low production or prototype guns are encountered, use extreme caution and seek an expert appraisal.

Model 94

This is the post-1964 lever-action carbine chambered for the .30-30, 7-30 Waters, and the .44 Magnum cartridges. It is offered with a 20" or 24" barrel and has a 6- or 7-round, tubular magazine depending on barrel length. The round barrel is offered with open sights. The forearm is held on by a single barrel band. The finish is blued, with a straight-grip walnut stock. In 1982 it was modified to angle ejection to simplify scope mounting. It was introduced as a continuation of the Model 94 line in 1964. In 2003 a top-tang safety was installed and the .480 Ruger caliber was added. The Model 94 series was discontinued in 2006. Premium for unusual chamberings such as 7-30 Waters, etc.

POST-1964 MODEL 70S

These post-Model 70 rifles were fitted with redesigned actions and bolt with free-floating barrels, and new style stock with impressed checkering.

***NOTE**: In 1994, U.S. Repeating Arms reintroduced the pre-1964 Model 70 action on many of its Model 70 rifles. At the present time this new action does not affect values but may do so in the future depending on shooter reaction.*

In 2006, the Model 70 was discontinued by US Repeating Arms. It is uncertain whether the bulk of post-'64 Model 70s will become truly collectible, although the potential is there.

In the editor's opinion, there was never anything really wrong with the post-'64 Model 70. It might even be argued that in "dumbing down" the M70, Winchester was simply ahead of its time, as many of the manufacturing "shortcuts" that characterized the post-'64 M70 have come to be accepted as commonplace.

Nevertheless, as the M70 reached the end of its seven-decade run, it had lost much of its premium status. The Ruger M77, the Remington M700 and Model Seven, the Browning A-Bolt and other high-end bolt rifles gave it a serious run for its money.

In October of 2007, Winchester Repeating Arms announced that the pre-'64-style Model 70 would once again be produced – this time at the FN plant in Columbia, SC. We wish it well!

Model 70—Standard Grade

This is a bolt-action sporting rifle chambered for various popular calibers such as the .22-250, .222 Rem., .243 Win., .270 Win., .30-06, and .308 Win. It features a 22" barrel with open sights and a 5-round, integral box magazine. The finish is blued with a Monte Carlo-type stock furnished with sling swivels. It was manufactured between 1964 and 1971.

WINCHESTER COMMEMORATIVE RIFLES

Beginning in the early 1960s, Winchester produced a number of special Model 1894 rifles and carbines that commemorated certain historic events, places, or individuals. In some cases they are slightly embellished and in others are quite ornate. If a Winchester commemorative rifle has been cocked leaving a line on the hammer or the lever, many collectors will show little or no interest in its acquisition. If they have been fired, they will realize little premium over a standard, Post-1964 Model 94. A number of commemoratives have been ordered by outside concerns and are technically not factory issues. Most have less collectibility than the factory-issued models. There are a number of concerns that specialize in marketing the total range of Winchester commmemorative rifles. Listed are the factory-issue commemoratives with their current value, their issue price, and the number manufactured.

NOTE: Since the Model 94 was discontinued in 2006, values of Model 94 commemoratives have risen right along with values for Model 94s in general. We expect this situation to moderate over time but for the present, it's a seller's market.

WINDSOR

Windsor, Vermont
Robbins & Lawrence
Hartford, Connecticut

Windsor Rifle-Musket

A .577 caliber single-shot percussion rifle with a 39" round barrel secured by three barrel bands. The lock marked "Windsor." Rifles of this pattern were contracted for by the British Government. The lock and barrel finished in the white, brass furniture, and a walnut stock. Approximately 16,000 were made from 1855 to 1858.

WINSLOW ARMS CO.

Camden, South Carolina

Bolt Action Rifle

A high-grade, semi-custom sporting rifle built upon a number of actions and offered in all popular calibers from .17 Remington to the .458 Winchester Magnum with a 24" barrel and a 3-shot magazine. The larger Magnum models have a 26" barrel and a 2-shot magazine. Two basic stocks are offered—the Conventional Bushmaster, which features a standard pistol grip and a beavertail forearm; and also the Plainsmaster, which has a full curled, hooked pistol grip and a wide, flat beavertail forearm. Both have Monte Carlo-style stocks with recoil pads and sling swivels. Offered in a choice of popular woods with rosewood forend tips and pistol gripcaps. Eight different grades of this rifle are available and the following lists the values applicable for each.

Commander Grade

Figured walnut stock. Rosewood forearm tip and grip cap. White line recoil pad. FN Supreme action.

Exc.	V.G.	Good	Fair	Poor
950	750	625	—	—

Regal Grade

All features of Commander Grade plus ivory and ebony inlay on stock, French-style checkering, jeweled bolt.

Exc.	V.G.	Good	Fair	Poor
1500	1200	825	—	—

Regent Grade

As above with addition of hand-carved checkering.

Exc.	V.G.	Good	Fair	Poor
1575	1250	850	—	—

Regimental Grade

As above but with addition of basket weave carving, two ivory stock inlays and large ivory and ebony inlay on both side of butt stock with animal silhouette.

Exc.	V.G.	Good	Fair	Poor
2000	1500	1000	—	—

Crown Grade

As above but with more elaborate ivory inlays on stock.

Exc.	V.G.	Good	Fair	Poor
2500	1750	1200	—	—

Royal Grade

As above but with addition even more elaborate stock carving and ivory and ebony inlay.

Exc.	V.G.	Good	Fair	Poor
3000	2250	1350	—	—

Imperial Grade

As above but with addition of engraved barrel from receiver to 11" forward. Engraved receiver ring, bolt handle and trigger guard. Engraved scope mounts and rings.

Exc.	V.G.	Good	Fair	Poor
4000	3000	2500	2000	1000

Emperor Grade

As above but with addition of gold raised relief animals engraved receiver and forward part of barrel with muzzle tip engraved engraved as well. Highest Winslow grade.

NIB	Exc.	V.G.	Good	Fair	Poor
5000	4000	2850	1500	1200	650

ZULAICA, M.

Eibar, Spain

Zulaica

A solid-frame .22 caliber revolver with a 6-shot cylinder that has zigzag grooves on its exterior surface. It is fired by an external hammer and the frame is hollow with a rod inside of it that connects to the breechblock. There is a serrated cocking piece connected to this rod that is found at the top rear of the frame. When fired, the cartridge case blows from the cylinder and activates the breechblock similar to a semi-automatic pistol.

Exc.	V.G.	Good	Fair	Poor
850	600	500	350	250

ROYAL

The name Royal was applied to a number of pistols produced by this company, as listed.

Royal

A 6.35mm or 7.65mm semi-automatic pistol that is normally marked on the slide "Automatic Pistol 6.35 Royal" or "Automatic Pistol 7.65 Royal."

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
250	125	100	75	50

Royal
